

### MAHARAJA INSTITUTE OF TECHNOLOGY MYSORE

# Autonomous Institution Affiliated to VTU

## **Competency-Based Syllabus Design**

For

# **Information Science and Engineering (IS&E)**

(Under Outcome Based Education (OBE) and Choice-Based Credit System (CBCS))

# Offered from 7<sup>th</sup> to 8<sup>th</sup> Semester of Study

In

Partial Fulfillment for the Award of Bachelor's Degree

# Information Science and Engineering 2023 scheme

Scheme Effective from the academic year 2023-24

Department of Informations Science and Engineering, MIT Mysore

10	Future with this Subject

7th Semester	Management Sciences(MS)	M23BCS701
	Management and Entrepreneurship	

#### 1. Prerequisites

I I CI CY	4151005	
S/L	Proficiency	Prerequisites
1.	Management skills	How the Brain Processes Information to Make Decisions: Reflective and Reactive Systems
2.	Critical Thinking Case	New Management Challenges for the New Age.
3.	Decisional roles	The responsibility of making decisions on behalf of both the organization and the stakeholders with an interest in it.
4.	Determination	Entrepreneurs look at defeat as an opportunity for success. They are determined to make all of their endeavors succeed,
5.	Creativity	Entrepreneurs will repurpose products to market them to new industries.

#### 2. Competencies

S/L	Competency	KSA Description
1	Management	<ul> <li>Knowledge: Management is how businesses organize and direct workflow, operations, and employees to meet company goals.</li> <li>Skills: The primary goal of management is to create an environment that empowers employees to work efficiently and productively</li> <li>Attitudes: Management is a dynamic function and evolves and adapts to changes in its environment, whether they are economic, socio-political or technological.</li> </ul>
2	Administration	<ul> <li>Knowledge: performance of supervising duties, management.</li> <li>Skills: Administration skills involve organization, communication, teamwork, customer service, responsibility and time management.</li> <li>Attitudes: It is a collaborative activity that involves writing, correspondence, and other administrative tasks. Administration is essential in both small, local organizations and large, complex enterprises.</li> </ul>
3	Planning	<ul> <li>Knowledge: Planning is essential for the establishment of goals, policies, and procedures for a social or economic unit</li> <li>Skills: Process used to develop objectives, develop tasks to meet objectives, determine needed resources, create a timeline, determine tracking and assessment, finalize the plan, and distribute the plan to the team.</li> <li>Attitudes: Planning is based on foresight, the fundamental capacity for mental time travel.</li> </ul>
4	Organizing and staffing:	<ul> <li>Knowledge: Arranging resources and tasks to implement the plan</li> <li>Skills: Staffing: Recruiting, selecting, evaluation and training individuals for specific roles within the organization</li> <li>Attitudes: Arrange and relate the work, so that it can be done efficiently by people – specifically.</li> </ul>
5	Directing	<ul> <li>Knowledge: Directing: Leading and motivating employees to work towards the organization's goals.</li> <li>Skills: The directing function of management is the process of motivating, communicating, instructing, leading, and supervising employees in order to ensure that they are working towards the accomplishment of organizational goals</li> <li>Attitudes: It is a continuous managerial process that goes on. Throughout the life of the organization.</li> </ul>

		Knowledge: Originates from a thirteenth-century French verb,
		entrepreneur, meaning "to do something" or "to undertake."
		Skills: Include various skill sets such as leadership, business management,
6.	Entrepreneur:	time management, creative thinking and problem-solving.
		Attitudes: Entrepreneurs are business people who find their success by
		taking risks. In their pursuits, they often become disruptors in established
		industries.
		Knowledge: In which manufacturing, providing services, productions are
	Small scale industries:	done on a small scale or micro scale.
7		Skills: Industries that manufacture, produce and render services on a small
/		or micro scale level.
		Attitudes: To play an active role in reducing the regional imbalances in the
		nation. To help in improving the standard of living for people in rural areas.
		Knowledge: Refers to the assistance, frameworks, and resources provided
	Institutional support	by formal and informal institutions to individuals
8		Skills: The organization is running various schemes to meet its objectives.
		Attitudes: Approved Colleges/Registered facilitators with objective for
		enhancing their Employment/ Self-Employment opportunities

#### 3. Syllabus

Management and Entrepreneurship SEMESTER – VII				
M23BCS701	CIE Marks	50		
(3:0:0:0)	SEE Marks	50		
40 Hours	Total Marks	100		
03	Exam Hours	03		
	EMESTER – VII M23BCS701 (3:0:0:0) 40 Hours	EMESTER – VII         M23BCS701       CIE Marks         (3:0:0:0)       SEE Marks         40 Hours       Total Marks		

#### **Course Objectives:**

1. Explain fundamentals management functions of a manager. Also explain planning and decision making processes

2. Explain the organizational structure, staffing and leadership process and describe the understanding of motivation.

3. Explain understanding of Entrepreneurships and Entrepreneurship development process.

4. Illustrate Small Scale Industries, various types of supporting agencies and financing available for an entrepreneur.5. Summarize the preparation of project report, need significance of report. Also to explain about industrial ownership.

#### Module -1

**Management:** Introduction - Meaning - nature and characteristics of Management, Scope and Functional areas of management - Management as art or science, art or profession - Management & Administration - Roles of Management, Levels of Management,

**Planning**: Nature, importance and purpose of planning process objectives - Types of plans (meaning only) - Decision making, Importance of planning - steps in planning & planning premises

Module -2

**Organizing and staffing**: Nature and purpose of organization, Principles of organization – Types of organization-Departmentation Committees-Centralization Vs Decentralization of authority and responsibility - Span of control -MBO and MBE (Meaning only) Nature and importance of staffing-- :Process of Selection & Recruitment (in brief). **Directing:** Meaning and nature of directing Leadership styles, Motivation, Theories, Communication - Meaning and importance - coordination, meaning and importance and Techniques of coordination.

Module -3

**Entrepreneur:** Meaning of Entrepreneur; Evolution of the Concept; Functions of an Entrepreneur, Types of Entrepreneur, Entrepreneur an emerging class. Concept of Entrepreneurship - Evolution of Entrepreneurship; Development of Entrepreneurship; Stages in entrepreneurial process; Role of entrepreneurs in Economic Development;

Module	-4
--------	----

**Small scale industries:** Definition; Characteristics; Need and rationale; Objectives; Scope; roleof SSI in Economic Development. Advantages of SSI, Steps to start and SSI - Government policy towards SSI; Different Policies of SSI; Government Support for SSI during 5 year plans. Impact of Liberalization, Privatization, Globalization on SSI Effect of WTO/GATT Supporting Agencies of Government for SSI, Meaning, Nature of support; Objectives; Functions; Types of Help; Ancillary Industry and Tiny Industry (Definition Only).

Institutional support: Different Schemes; TECKSOK; KIADB; KSSIDC;

Module -5

**Preparation of project**: Meaning of Project; Project Identification; Project Selection; Project Report; Need and Significance of Report; Contents; formulation; Guidelines by Planning Commission for Project report; Network Analysis; Errors of Project Report; Project Appraisal. Identification of. Business Opportunities: Market Feasibility Study; Technical Feasibility Study; Financial Feasibility Study & Social Feasibility Study.

Industrial ownership: Definition and meaning of Partnership, Characteristics of Partnership, Kinds of Partners, Partnership Agreement or Partnership Deed

#### **Text Books:**

1. Principles of Management - P. C. Tripathi, P.N. Reddy - Tata McGraw Hill.

2. Dynamics of Entrepreneurial Development & Management-Vasant Desai, Himalaya PublishingHouse.

3. Entrepreneurship Development – Poornima. M. Charantimath, Small Business Enterprises – PearsonEducation - 2006 (2 & 4)

#### **Reference Books:**

1. Management Fundamentals - Concepts, Application, Skill Development - RobersLusier, Thomson.

2. Entrepreneurship Development - S. S. Khanka, S. Chand & Co. New Delhi.

3. Management - Stephen Robbins, Pearson Education/PHI - 17thEdition, 2003.

S/L	<b>4.</b> Syllabus Timeline	Description
1	Week 1-3: Management and Planning	<b>Competency:</b> Understand the basic functions managements and planning <b>Knowledge:</b> Management is how businesses organize and direct workflow, operations, and employees to meet company goals. <b>Skills:</b> The primary goal of management is to create an environment that empowers employees to work efficiently and productively.
2	Week 4-6: Organizing and staffing: Directing:	Competency: Understand the basic functions managements, committee, centralised and decentralised authority and responsibility and directing. Knowledge: Arranging resources and tasks to implement the plan. Skills: Staffing: Recruiting, selecting, evaluation and training individuals for specific roles within the organization
3	Week 8-11: Entrepreneur:	Competency: Students will be able to do, arrange and relate the work, so that it can be done efficiently and – specifically. Knowledge: Entrepreneurship usually starts as a small business but the long-term vision is much greater, to seek high profits and capture market share with an innovative new idea to reach students. Skills: Include various skill sets such as leadership, business management, time management, creative thinking and problem-solving.
4	Week 7-8: Small scale industries and Institutional support	Competency: Learn the scope and manufacturing development OF SSI and institution. Knowledge: In which manufacturing, providing services, productions are done on a small scale or micro scale. Skills: Industries that manufacture produce and render services on a small or micro scale level.
5	Week 9-12: Preparation of project and Industrial ownership	<b>Competency:</b> student able to understand the project identification, selection, preparation and report, and also knowledge about industrial ownership. <b>Knowledge:</b> Studentsable to analyse differences between single and partner ownership and Identification of. Business Opportunities. <b>Skills:</b> manufacture produce and render services

4. Syllabus Timeline

Department of Informations Science and Engineering, MIT Mysore

S/L	TLP Strategies:	Description
1	Lecture Method	Utilize various teaching methods within the lecture format to management and entrepreneurship.
2	Video/Animation	Incorporate visual aids like videos/animations to enhance understanding of management and entrepreneur activities.
3	Collaborative Learning	Encourage collaborative learning for improved competency application.
4	Higher Order Thinking (HOTS) Questions:	Pose HOTS questions to stimulate critical thinking related to each competency

#### 5. Teaching-Learning Process Strategies

#### 6. Assessment Details (both CIE and SEE)

The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 40% of the maximum marks (20 marks out of 50). A student shall be deemed to have satisfied the academic requirements and earned the credits allotted to each subject/ course if the student secures not less than 35% (18 Marks out of 50) in the semester-end examination(SEE), and a minimum of 40% (40 marks out of 100) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together

#### **Continuous Internal Evaluation:**

Components		Weightage	Max. Marks	Min. Marks
Internal Assessment-Tests (A)	2	50%	25	10
Assignments/Quiz/Activity (B)	2	50%	25	10
Total Marks 50 20				20
	Internal Assessment-Tests (A) Assignments/Quiz/Activity (B)	Internal Assessment-Tests (A)2Assignments/Quiz/Activity (B)2	Internal Assessment-Tests (A)250%Assignments/Quiz/Activity (B)250%	Internal Assessment-Tests (A)250%25Assignments/Quiz/Activity (B)250%25

#### **Final CIE Marks** = (A) + (B)

Average internal assessment shall be the average of the 2 test marks conducted.

#### Semester End Examination:

Theory SEE will be conducted as per the scheduled timetable, with common question papers for the subject (duration 03 hours)

- 1. Question paper pattern will be ten questions. Each question is set for 20marks. The medium of the question paper shall be English unless otherwise it is mentioned.
- 2. There shall be 2 questions from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have a mix of topics under that module if necessary.
- 3. The students have to answer 5 full questions selecting one full question from each module.
- 4. Marks scored will be proportionally scaled down to 50 marks

	7. Learning Objectives				
S/L	Learning Objectives	Description			
1	Management and	Explain fundamentals management functions of a manager. Also explain planning and			
1	Planning	decision making processes, management, object and administration			
2	Organizing and staffing: Directing	Explain the organizational structure, staffing and leadership process and describe the understanding of motivation about leadership style, communication, coordination and technique. Also learn the basic functions managements, committee, centralised and decentralised authority and responsibility and directing.			
3	Entrepreneur:	Explain understanding of Entrepreneurships and Entrepreneurship development process and Students will be able to do, arrange and relate the work, so that it can be done efficiently and – specifically.			
4	Small scale industries and Institutional support	Illustrate Small Scale Industries, various types of supporting agencies and financing available for an entrepreneur and learn the scope and manufacturing development OF SSI and institution.			
5	Preparation of project and Industrial ownership	Summarize the preparation of project report, need significance of report. Also to explain about industrial ownership and students able to understand the project identification, selection, preparation and report, and also knowledge about industrial ownership.			

#### 7. Learning Objectives

Course Outcomes (COs)		
COs	Description	
M23BCS701.1	Explain management functions of a manager. Also explain planning and decision making	
W125DC5/01.1	processes.	
M23BCS701.2	Explain the organizational structure, staffing and leadership processes and . describe the	
W125DC5701.2	understanding of motivation	
M23BCS701.3	Understanding of Entrepreneurships and Entrepreneurship development process.	
M22DC6701 4	Illustrate Small Scale Industries, various types of supporting agencies and financing available	
M23BCS701.4	for an entrepreneur.	
M23BCS701.5	Summarize the preparation of project report, need significance of report.	

#### 8. Course Outcomes (COs) and Mapping with POs/ PSOs

#### **CO-PO-PSO Mapping**

COs/POs	<b>PO1</b>	PO2	PO3	PO4	PO5	PO6	<b>PO7</b>	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

#### 10. Future with this Subject:

- Management: With the new start-ups and ongoing businesses, the business management field in India has witnessed a steady rise in demand for skilled managers. A business management degree can open the doors to many industries and you can climb up the hierarchy if you have the necessary skill
- Planning: Career planning is a lifelong process that can help you manage important life and work decisions. Consider your priorities, options, and strengths to build a plan that gets you where you want to go
- Organizing and staffing: The scope of a management system may include the whole of the organization, specific and identified functions of the organization, specific and identified sections of the organization, or one or more functions across a group of organizations. By embracing emerging technologies, leveraging data-driven insights, and adopting ethical recruiting practices, recruiters can navigate the ever-changing landscape of staffing with confidence and drive better outcomes for both employers
- Directing: Directing is thus concerned with instructing, guiding and inspiring people in the organisation to achieve its objectives. Its important components are communication, supervision, motivation and leadership. Supervision involves seeing that subordinates perform the work as per instructions given.

1. Pr	rerequisites	
S/L	Proficiency	Prerequisites
1	Mathematics	<ul> <li>Linear Algebra: Understanding of vectors, matrices, eigenvalues, and eigenvectors.</li> <li>Probability and Statistics: Basic concepts such as probability distributions, Bayes' theorem, variance, and hypothesis testing.</li> <li>Calculus: Differentiation and integration, especially in the context of optimization and gradient descent.</li> </ul>
2	Machine Learning Basics	Understanding of supervised and unsupervised learning. Familiarity with key algorithms such as linear regression, logistic regression, decision trees, and clustering. Basics of neural networks and deep learning.
3	Data Structures and Algorithms	Knowledge of common data structures like arrays, linked lists, stacks, queues, trees, and graphs. Understanding of algorithmic concepts like sorting, searching, and dynamic programming.
4	Text Processing:	Familiarity with regular expressions and basic text processing techniques. Basic understanding of tokenization, stemming, lemmatization, and stop-word removal
5	Basic of NLP Concepts	Awareness of what NLP is and its applications. Familiarity with terms like tokenization, parsing, language models, etc.
6	Linguistics	Basic understanding of syntax, semantics, and morphology. Awareness of linguistic structures like parts of speech, grammar, and sentence structure.

#### 2. Competencies

<b>2.</b> Con	ipetencies	
S/L	Competency	KSA Description
1	Application of NLP Foundations	<b>Knowledge:</b> Understand the origins, challenges, and applications of NLP, particularly in language and grammar processing, including Indian languages. <b>Skills:</b> Analyze key challenges in NLP, apply grammar-based and statistical language
		models, and develop basic NLP applications.
2	Proficiency in Text Preprocessing and Analysis	Knowledge:         Grasp essential text preprocessing techniques like tokenization, stemming, lemmatization, and regular expressions.         Skills:         Implement text preprocessing pipelines, perform word-level morphological parsing, and correct spelling errors using advanced techniques.
3	Language Modeling Techniques	<ul> <li>Knowledge:</li> <li>Understand various grammar-based and statistical language models, including modern models like Transformers.</li> <li>Skills:</li> <li>Develop and evaluate language models for different NLP tasks, implement n-gram models, and apply modern models like BERT or GPT.</li> </ul>
4	Ability to Conduct Syntactic and Semantic Analysis	<ul> <li>Knowledge:</li> <li>Understand syntactic structures, context-free grammars, and probabilistic parsing methods; comprehend semantic role labeling and frame semantics.</li> <li>Skills:</li> <li>Perform syntactic parsing using context-free grammar, constituency parsing, and dependency parsing, and execute semantic analysis through role labeling.</li> </ul>

#### **Reference Books:**

Daniel Jurafsky and James H Martin, "Speech and Language Processing: An introduction to Natural Language Processing, Computational Linguistics & Speech Recognition", 2<sup>nd</sup> Edition, Prentice Hall, 2008.
 James Allen, "Natural Language Understanding", 2nd edition, Benjamin/Cummings publishing company, 1995.

	Lab Componenets Programs
1	Introduction to Python for NLP: Basic string manipulation, regular expressions, and text processing.
2	Write a program to preprocess a given text document by performing tokenization, stop word removal, and stemming/lemmatization using the NLTK or SpaCy library
3	Implementing Tokenization and POS Tagging: Use NLTK or spaCy to perform tokenization and part- of-speech tagging on sample texts.
4	Define a small Context-Free grammar (CFG) for a subset of the English language. Write a parser that checks if a given sentence belongs to the language defined by your CFG.
5	Implement a basic POS tagger using the NLTK library. Compare its performance with SpaCy's pre- trained POS tagger on the same text.
6	Implement a simple Named Entity Recognition (NER) model using the NLTK library. Train it on a small custom dataset and evaluate its performance.
7	Implement Latent Semantic Analysis (LSA) to find similarity between documents in a corpus. Use the cosine similarity measure to find the most similar document to a given query document.
8	Write a program to extract subject-object-verb triplets from a given text using dependency parsing.
9	Implement a simple inverted index for a set of documents. Allow users to query the index and return ranked results based on TF-IDF.
10	Evaluation of IR Systems: Design and conduct experiments to evaluate the effectiveness of an information retrieval system using precision, recall, and F1-score.

#### 4. Syllabus Timeline

1       Week1-2: Overview and Language Modeling       Processing (NLP).         1       Week1-2: Overview and Language Modeling       • Develop a foundational understanding of language models and their application in NLP.         • Origins and evolution of NLP.       • Origins and evolution of NLP.         • Challenges in processing Indian languages.       • Challenges in processing Indian languages.         • Different types of grammar-based and statistical language models.       • Different types of grammar-based and statistical language models.         • Analyze and differentiate between various NLP challenges and       • Analyze and differentiate between various NLP challenges and	S/L	Syllabus Timeline	Description
<ul> <li>Apply knowledge of language models to develop basic NLP solutions.</li> </ul>	1	Overview and Language	<ul> <li>Understand the fundamental concepts and challenges of Natural Language Processing (NLP).</li> <li>Develop a foundational understanding of language models and their application in NLP.</li> <li>Knowledge: <ul> <li>Origins and evolution of NLP.</li> <li>Challenges in processing Indian languages.</li> <li>Key applications of NLP, such as information retrieval.</li> <li>Different types of grammar-based and statistical language models.</li> </ul> </li> <li>Skills: <ul> <li>Analyze and differentiate between various NLP challenges and applications.</li> </ul> </li> </ul>

		Competency:
		<ul> <li>Analyze text at the word level and perform syntactic parsing for NLP</li> </ul>
		tasks.
		• Understand and apply techniques for part-of-speech tagging and syntactic
	W 1.2.4	parsing.
	Week 3-4:	Knowledge:
	Word Level and	• Basics of word-level analysis, including regular expressions and finite-
2	Syntactic	state automata. Techniques for morphological parsing, spelling error
	Analysis	
	1111113515	detection, and correction.
		• Syntactic analysis using context-free grammar and constituency parsing.
		Skills:
		• Implement regular expressions and finite-state automata for text analysis.
		<ul> <li>Perform morphological parsing and correct spelling errors in text.</li> </ul>
		• Perform morphological parsing and correct spennig errors in text.
		Competency:
		• Extract and analyze relations from text using advanced NLP techniques.
		• Understand and apply knowledge roles and semantic role labeling in
	Week 5-6:	specific domains.
		Knowledge:
	Extracting	• Techniques for extracting relations from word sequences and dependency
3	<b>Relations from</b>	paths.
5	Text and Case	1
	Studies	• Subsequence kernels and dependency-path kernels for relation extraction.
		Skills:
		<ul> <li>Apply relation extraction techniques to analyze text.</li> </ul>
		• Analyze real-world case studies and apply NLP techniques for web search.
		Competency:
		• Evaluate and enhance textual explanations using advanced NLP
		techniques.
		<ul> <li>Identify and classify text types based on cohesion and structure.</li> </ul>
		Knowledge:
		• Techniques for evaluating self-explanations using word matching, latent
	Week 7-8:	semantic analysis (LSA), and topic models.
	Evaluating Self-	•
4	Explanations and	
4	Textual	to identify textual signatures and measure cohesion.
	Signatures	Skills:
	Signatures	<ul> <li>Implement word matching, LSA, and topic models to evaluate self-</li> </ul>
		explanations.
		• Use Coh-Metrix to analyze the cohesion of text structures.
		Apply probabilistic classification and sequence modeling for document
		separation.
		• Develop and test novel approaches for semantically-based text mining.
		Competency:
		• Design and evaluate information retrieval systems using various models.
		• Utilize lexical resources effectively in NLP applications.
		Knowledge:
		0
		• Key design features of information retrieval systems.
	Week 9-10:	• Classical, non-classical, and alternative models of information retrieval.
		• Methods for evaluating information retrieval systems.
5	Information	• Overview of lexical resources, including WordNet, FrameNet, stemmers,
-	Retrieval and	POS taggers, and research corpora
	Lexical Resources	
		Skills:
		• Design and implement information retrieval systems using different
		models.
		• Evaluate the performance and effectiveness of information retrieval
		systems.
		<ul> <li>Apply lexical resources like WordNet and FrameNet in NLP tasks.</li> </ul>
1	1	- Apply leaded need need need word of and mane net in the tasks.

2023 Scheme - 7th to 8th Sem Competency Based Syllabi for B.E CSE

	•	Develop custom stemmers and POS taggers for specific applications.
5. Tead	ching-Learning Process Stra	itegies
S/L	TLP Strategies:	Description
1	Lecture Method	Utilize various teaching methods within the lecture format to reinforce competencies.
2	Video/Animation	Incorporate visual aids like videos/animations to enhance understanding of NLP concepts.
3	Collaborative Learning	Encourage collaborative learning for improved competency application.
4	Higher Order Thinking (HOTS) Questions:	Pose HOTS questions to stimulate critical thinking related to each competency.
5	Problem-Based Learning (PBL)	Implement PBL to enhance analytical skills and practical application of competencies
6	Pair Programming	Incorporate pair programming sessions where students collaborate in pairs to solve coding tasks or work on projects together.
7	Practical Application and Projects	To reinforce the competencies in an NLP course, practical applications and projects are essential. These hands-on activities allow students to apply the theoretical knowledge and skills they've gained in real-world scenarios.
8	Problem-Solving Sessions	Organize problem-solving sessions where students can work together to solve coding challenges and overcome programming obstacles

#### 6. Assessment Details (both CIE and SEE)

The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 40% of the maximum marks (20 marks out of 50). A student shall be deemed to have satisfied the academic requirements and earned the credits allotted to each subject/ course if the student secures not less than 35% (18 Marks out of 50) in the semester-end examination (SEE), and a minimum of 40% (40 marks out of 100) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together

]	Theory Course with 4 credits: Integrated Professio	nal Core Cours	e (IPC)

	Components	Number	Weightage	Max. Marks	Min. Marks
Internal Assessment-Tests (A)		2	60%	15	06
Theory (A)	Assignments/Quiz/Activity (B) 2		40%	10	04
	Total Marks	100%		25	10
Components		Number	Weightage	Max. Marks	Min. Marks
	Record Writing	Continuous	60%	15	06
Laboratory(B)	Test at the end of the semester	1	40%	10	04
	Total Marks		100%	25	10

#### Final CIE Marks = (A) + (B)

#### Semester End Examination pattern:

- Question paper pattern will be ten questions. Each question is set for 20 marks. The medium of the question paper shall be English unless otherwise it is mentioned.
- There shall be 2 question from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have mix of topics under that module if necessary.
- The students have to answer 5 full questions selecting one full question from each module.
- The question paper may include at least one question from the laboratory component.
- Marks scored will be proportionally scaled down to 50 mark

2023 Scheme - 7	7th to 8th Se	em Competency	Based Syllabi f	or B.E CSE

7. Lea	rning Objectives	
S/L	Learning	Description
	Objectives	
1	Analyze Natural Language Text	Analyze natural language text understanding linguistic and computational techniques, enabling them to identify, extract, and interpret patterns, relationships, and structures within diverse text corpora.
2	Define the Importance of NLP	Explain the role of NLP in enhancing human-computer interaction through applications like virtual assistants, chatbots, and automated translation services.
3	Understand the Concepts of Text Mining	Apply text preprocessing techniques to clean and prepare text data for analysis, including handling noise and normalization. Use feature extraction methods to transform text data into numerical representations suitable for analysis, such as term frequency-inverse document frequency (TF-IDF) and word embeddings
4	Illustrate Information Retrieval Techniques	Design and build a basic search engine using information retrieval models, including vector space models and Boolean retrieval. Implement and evaluate advanced retrieval techniques, such as probabilistic models and relevance feedback, to enhance search accuracy.

#### 8. Course Outcomes (COs) and Mapping with POs/ PSOs Course Outcomes (COs)

Cours	e Outcomes (COs)
COs	Description
M23BCS702.1	Articulate the Foundations of NLP by understanding linguistic structures and contextual meaning.
M23BCS702.2	Analyze the role of language and grammar in NLP, applying concepts processing and information extraction.
M23BCS702.3	Development of Document Separation Techniques and Semantically-Based Text Mining Models
M23BCS702.4	Applying both classical and alternative models of information retrieval to optimize user satisfaction and retrieval performance.

Total	20	20	20	40	100

#### **Conditions for SEE Paper Setting:**

Each module of SEE question paper should be allocated with questions for 20% of the total SEE marks

#### 10. Future with this Subject

The future of advanced Java development is poised to evolve with advancements in technology and shifts in software development practices.

#### 1. Career Opportunities in Technology and Industry

- Artificial Intelligence and Machine Learning Roles: NLP is a core component of AI and ML. Students can pursue careers as NLP engineers, data scientists, or machine learning engineers, working on developing intelligent systems that understand and process human language.
- Speech and Voice Recognition: With the rise of voice-activated technologies (like virtual assistants), there's a growing demand for experts in speech recognition and synthesis. Careers in companies like Google, Amazon, and Apple, focusing on improving voice-controlled devices, are strong options.
- Healthcare Applications: NLP is increasingly used in healthcare for tasks like medical records analysis, predictive modeling, and patient interaction through chatbots. Careers in health tech companies or research labs focusing on medical NLP are promising.
- Financial Technology (FinTech): NLP is vital in automating tasks such as sentiment analysis for stock trading, fraud detection, and customer service automation. Careers in FinTech, working on developing NLP-based financial models, are on the rise.

#### 2. Research and Academic Opportunities

- Advanced NLP Research: Students can pursue advanced degrees (Master's or Ph.D.) to engage in cutting-edge research in areas like deep learning for NLP, multilingual NLP, or cognitive modeling. Universities and research institutions worldwide are constantly exploring new frontiers in NLP.
- Cross-disciplinary Research: NLP intersects with psychology, cognitive science, and linguistics, offering opportunities to explore how language processing aligns with human cognition, language acquisition, and communication patterns.

#### 3. Entrepreneurship and Innovation

- **Startup Opportunities:** NLP is a hotbed for innovation, with numerous startups focusing on areas like chatbots, automated customer service, and content creation tools. Students with entrepreneurial aspirations can leverage their NLP skills to develop new products and services.
- **Product Development:** Companies across industries are looking to integrate NLP into their products. Students can lead or contribute to product development teams, creating NLP-driven applications like personalized recommendations, automated content generation, or advanced analytics tools.

#### 4. Societal Impact and Global Challenges

- **Bridging Language Barriers:** NLP is crucial for developing translation services that help bridge language barriers globally, promoting cross-cultural communication and understanding. This can have profound effects on education, diplomacy, and global business.
- **Information Accessibility:** NLP can make information more accessible by improving search engines, summarization tools, and content recommendation systems, ensuring that people can find and understand information more efficiently.
- **Fighting Misinformation:** NLP techniques are essential in the fight against misinformation by automating fact-checking, analyzing the credibility of sources, and detecting fake news.

#### 2. Competencies

S/L	Competency	KSA Description
1	Theoretical Understanding	<ul> <li>Knowledge:</li> <li>Understand and articulate how learning algorithms such as backpropagation and gradient descent work to adjust weights and minimize loss functions.</li> <li>Skills:</li> <li>Demonstrate an understanding of how these algorithms contribute to the training and optimization of neural networks.</li> <li>Attitudes:</li> <li>Develop and implement neural network models using popular frameworks such as TensorFlow, Keras, or PyTorch.</li> </ul>
2	Practical Skills	<ul> <li>Knowledge:</li> <li>Build, train, and evaluate neural network models for various tasks (e.g., image classification, natural language processing).</li> <li>Skills:</li> <li>Demonstrate an understanding of how these algorithms contribute to the training and optimization of neural networks.</li> <li>Attitudes:</li> <li>Perform data preprocessing tasks such as normalization, data augmentation, and feature extraction.</li> </ul>
3	Programming and Computational Skills	Knowledge:         Write clean, efficient code in Python for neural network development and experimentation.         Skills:         Make informed decisions about model architecture and training processes to balance performance with computational resources.         Attitudes:         Utilize Python libraries and tools for implementing and testing deep learning models.
4	Research and Innovation	Knowledge:         Keep up-to-date with the latest research and developments in neural networks and deep learning.         Skills:         Apply state-of-the-art techniques and approaches to current problems and projects based on recent advancements.         Attitudes:         Innovate and experiment with new approaches to enhance model performance or address specific challenges.
5	Ethical and Practical Considerations	Knowledge:         Understand and address ethical concerns related to neural networks and deep learning, including bias, fairness, and privacy issues.         Skills:         Implement practices to ensure responsible and ethical use of AI technologies.         Attitudes:         Develop and deploy models in real-world applications, ensuring they operate effectively and efficiently in production settings.

### 3. Syllabus

Neural Network and Deep Learning SEMESTER – VII							
Course Code	M23BIS703	CIE Marks	50				
Number of Lecture Hours/Week(L: T: P: S)(4:0:0:0)SEE Marks50							

Department of Informations Science and Engineering, MIT Mysore

2023 Scheme – 7th to 8th	Sem Competency Based S	Syllabi for B.E CSE	
Total Number of Lecture Hours	50 hours Theory	Total Marks	100
Credits	04	Exam Hours	03
Course objectives:			
• Figure out the context of neural network	s and deep learning		
• Know how to use a neural network			
• Explore the data needs of deep learning			
• Have a working knowledge of neural ne	tworks and deep learning		
• Explore the parameters for neural netwo	orks		
	Module-1		
Machine Learning Basics: Learning Algorith			
Validation Sets, Estimator, Bias and Variance,			
Learning Algorithms, Unsupervised Learnin		Gradient Decent, build	ing a Machine
Learning Algorithm, Challenges Motivating D			
	Module-2		
Deep Feedforward Networks: Gradient-Base			
Regularization: Parameter Norm Penalties, N			
Under-Constrained Problems, Dataset Augme		1	0.
Learning, Early Stopping, Parameter Tying an		e Representations, Bag	ging, Dropout.
	Module-3		
<b>Optimization for Training Deep Models:</b> He			
Network Optimization, Basic Algorithms. Para			
Rates. Convolutional Networks: The Convolu			
an Infinitely Strong Prior, Variants of the Basi		uctured Outputs, Data	Гуреs, Efficient
Convolution Algorithms, Random or Unsuper

Sequence Modelling: Recurrent and Recu			
Networks, Bidirectional RNNs, Encoder-D	1 1	ence Architectures, D	eep Recurrent
Networks, And Recursive Neural Networks. I	Long short-term memory		
	Module-5		
Practical Methodology: Performance Metric	s, Default Baseline Models,	Determining Whether	to Gather More

Data, Selecting Hyperparameters, Debugging Strategies, Example: Multi-Digit Number Recognition. Applications: Vision, NLP, Speech.

#### Text Books:

1. Deep Learning , Ian Good fellow and YoshuaBengio MIT Press https://www.deeplearn ingbook.org/ 2016. **Reference Books:** 

2. Neural Networks: A systematic Introduction, Raúl Rojas 1996.

3. Pattern Recognition and machine Learning, Chirstopher Bishop 2007.

#### 4. Syllabus Timeline

S/L	Syllabus Timeline	Description
1	Week 1-3: Module 1	Learning Algorithms, Capacity, Overfitting and Underfitting, Hyperparameters and Validation Sets, Estimator, Bias and Variance, Maximum Likelihood Estimation, Bayesian Statistics, Supervised Learning Algorithms, Unsupervised Learning Algorithms, Stochastic Gradient Decent, Building a Machine Learning Algorithm, Challenges Motivating Deep Learning.
2	Week 3-7: Module 2	Gradient-Based Learning, Hidden Units, Architecture Design, Back-Propagation. Regularization: Parameter Norm Penalties, Norm Penalties as Constrained Optimization, Regularization and Under-Constrained Problems, Dataset Augmentation, Noise Robustness, Semi-Supervised Learning, Multi-Task Learning, Early Stopping, Parameter Tying and Parameter Sharing, Sparse Representations, Bagging, Dropout.

3	Week 7-11: Module 3	How Learning Differs from Pure Optimization, Challenges in Neural Network Optimization, Basic Algorithms. Parameter Initialization Strategies, Algorithms with Adaptive Learning Rates. Convolutional Networks: The Convolution Operation, Motivation, Pooling, Convolution and Pooling as an Infinitely Strong Prior, Variants of the Basic Convolution Function, Structured Outputs, Data Types, Efficient Convolution Algorithms, Random or Unsupervised Features.
4	Week 10-12: Module 4	Unfolding Computational Graphs, Recurrent Neural Networks, Bidirectional RNNs, Encoder-Decoder Sequence-to-Sequence Architectures, Deep Recurrent Networks, Recursive Neural Networks. Long short-term memory
5	Week 12-15: Module 5	Performance Metrics, Default Baseline Models, Determining Whether to Gather More Data, Selecting Hyperparameters, Debugging Strategies, Example: Multi- Digit Number Recognition. Applications: Vision, NLP, Speech.

#### 5. Teaching-Learning Process Strategies

S/L	TLP Strategies:	Description
1	Project-Based Learning	Design courses around real-world projects that students can work on individually or in teams.
2	Design Sprints	Incorporate design sprints to teach students the iterative process of prototyping, testing, and refining designs.
3	Empathy Exercises	Implement activities that help students develop empathy for users, such as user persona creation and journey mapping.
4	Higher Order Thinking (HOTS) Questions:	Pose HOTS questions to stimulate critical thinking related to each competency.
5	Team Projects	Promote collaboration through group projects that mimic real-world team dynamics.
6	Peer Reviews	Encourage peer reviews and critiques to develop critical thinking and feedback skills.
7	Guest Speakers	Invite industry professionals to share their experiences and insights.

#### 6.Assessment Details (both CIE and SEE)

#### **Continuous Internal Evaluation:**

The minimum CIE marks requirement is 40% of maximum marks in each component.

#### CIE Split up

	Components	Number	Weightage	Max. Marks	Min. Marks
(i)	Internal Assessment-Tests (A)	2	50%	25	10
(ii)	Assignments/Quiz/Activity (B)	2	50%	25	10
	Total N	larks		50	20

#### Final CIE Marks = (A) + (B)

Average internal assessment shall be the average of the 2 test marks conducted

#### Semester End Examination:

- 1. Question paper pattern will be ten questions. Each question is set for 20marks. The medium of the question paper shall be English unless otherwise it is mentioned.
- 2. There shall be 2 question from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have mix of topics under that module if necessary.
- **3.** The students have to answer 5 full questions selecting one full question from each module. Marks scored will be proportionally scaled down to 50 mark

7.Lear	ning Objectives	
S/L	Learning Objectives	Description
1	Fundamental Concepts	<ul> <li>Understand Neural Network Basics</li> <li>Objective: Explain the architecture of neural networks, including neurons, layers (input, hidden, output), activation functions, and how data flows through the network.</li> <li>Outcome: Students will be able to describe the basic components and structure of neural networks and their functions.</li> <li>Grasp the Principles of Deep Learning</li> <li>Objective: Define deep learning and differentiate it from traditional machine learning approaches, focusing on the use of deep neural networks with multiple</li> </ul>
		layers.         Outcome: Students will understand what constitutes deep learning and its advantages over shallow neural networks.         Apply Linear Algebra in Neural Networks
2	Mathematical Foundations	<ul> <li>Objective: Use linear algebra concepts such as matrices, vectors, and operations to explain neural network computations.</li> <li>Outcome: Students will be able to perform matrix operations required for neural network training and understand their implications.</li> <li>Utilize Calculus for Optimization</li> <li>Objective: Apply calculus concepts, including differentiation and gradients, to understand how neural networks are optimized during training.</li> <li>Outcome: Students will be proficient in computing gradients and using them to optimize neural network parameters.</li> <li>Implement Probability and Statistics</li> </ul>
		<b>Objective</b> : Use probability and statistical concepts to understand loss functions, regularization techniques, and model evaluation metrics. <b>Outcome</b> : Students will be able to apply statistical methods to evaluate and improve neural network performance.
3	Neural Network Design and Training	<ul> <li>Build and Train Neural Networks</li> <li>Objective: Develop and train basic neural network models using popular frameworks such as TensorFlow, Keras, or PyTorch.</li> <li>Outcome: Students will be able to implement and train neural network models for various tasks, including classification and regression.</li> <li>Apply Regularization Techniques</li> <li>Objective: Implement regularization methods like dropout, L1/L2 regularization, and batch normalization to improve model generalization.</li> <li>Outcome: Students will be able to apply these techniques to prevent overfitting and enhance model performance.</li> </ul>
4	Practical Applications and Deployment	<ul> <li>Implement Neural Networks for Real-World Problems</li> <li>Objective: Apply neural network models to solve real-world problems in domains such as image recognition, speech processing, and recommendation systems.</li> <li>Outcome: Students will be able to design and deploy neural network solutions for practical applications.</li> <li>Deploy and Maintain Models</li> <li>Objective: Understand the process of deploying neural networks into production environments and maintaining their performance over time.</li> <li>Outcome: Students will be able to deploy models and address challenges related to scalability, integration, and real-time processing.</li> </ul>
5	Advanced Architectures and Techniques	Understand and Implement Convolutional Neural Networks (CNNs) Objective: Explain the architecture and application of CNNs for image and video processing tasks. Outcome: Students will be able to build and deploy CNNs for tasks like image classification and object detection. Explore Recurrent Neural Networks (RNNs) and LSTMs

Objective: Describe the structure and use cases of RNNs and Long Short-Term
Memory (LSTM) networks for sequence modeling.
Outcome: Students will be able to apply RNNs and LSTMs to problems involving
sequential data, such as time series forecasting and natural language processing.
Utilize Transformer Models
<b>Objective</b> : Understand the architecture and applications of transformer models and
attention mechanisms in tasks such as language translation and text generation.
<b>Outcome</b> : Students will be able to work with transformer models and apply them to
advanced natural language processing tasks.

#### 8. Course Outcomes (COs) and Mapping with POs/ PSOs Course Outcomes (COs)

Course Outcomes	
COs	Description
M23BIS703.1	Understand & Apply basic concepts of digital image processing & its applications
M23BIS703.2	Illustrate the use of image enhancement technique using Spatial and frequency domain for various image transformations.
M23BIS703.3	Infer image compression standards, segmentation and representation techniques.
M23BIS703.4	Analyze basic image processing algorithms for specific applications.

#### **CO-PO-PSO Mapping**

1														
COs/POs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
M23BIS703.1	3	3	-	-	3	-	-	-	-	-	-	-	3	-
M23BIS703.2	3	-	3	-	3	-	-	-	-	-	-	-	3	-
M23BIS703.3	-	-	-	3	-	-	-	-	-	-	-	-	-	3
M23BIS703.4	-	-	-	3	-	3	-	-	-	-	-	-	-	3
M23BIS703	3	3	3	3	3	3							3	3

#### **Continuous Internal Evaluation (CIE)**

			(===)		
	CO1	CO2	CO3	CO4	Total
All modules	10	10	10	20	50
Total	10	10	10	20	50

#### Semester End Examination (SEE)

	CO1	CO2	CO3	CO4	Total
All modules	20	20	20	40	100
Total	20	20	25	40	100

#### 9. Assessment Plan

#### **Continuous Internal Evaluation:**

The minimum CIE marks requirement is 40% of maximum marks in each component.

#### CIE Split up

	Components	Number	Weightage	Max. Marks	Min. Marks
(i)	Internal Assessment-Tests (A)	2	50%	25	10
(ii)	Assignments/Quiz/Activity (B)	signments/Quiz/Activity (B) 2 50%		25	10
	Total N	50	20		

#### Final CIE Marks = (A) + (B)

Average internal assessment shall be the average of the 2 test marks conducted

#### Semester End Examination:

1. Question paper pattern will be ten questions. Each question is set for 20marks. The medium of the question paper

shall be English unless otherwise it is mentioned.

- 2. There shall be 2 question from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have mix of topics under that module if necessary.
- **3.** The students have to answer 5 full questions selecting one full question from each module. Marks scored will be proportionally scaled down to 50 mark

#### 10. Future with this Subject

The future of neural networks and deep learning is poised to be dynamic and impactful, driven by ongoing research, technological advancements, and expanding applications across various fields. Here are some key areas where neural networks and deep learning are expected to shape the future: **1.** Advancements in Model Architectures

- More Sophisticated Architectures: Future developments will likely introduce even more advanced neural network architectures beyond current models like CNNs, RNNs, and transformers. Innovations may include new types of neural networks designed to handle complex tasks more efficiently.
- Efficient Models: There will be a focus on creating more efficient models that require less computational power and memory, making deep learning more accessible and sustainable.

**2.** Increased Integration with AI and Robotics

- Autonomous Systems: Deep learning will play a crucial role in the development of autonomous systems, including self-driving cars, drones, and robots. These systems will become increasingly capable of performing complex tasks in real-world environments.
- Human-Robot Interaction: Enhanced deep learning models will improve how robots understand and interact with humans, leading to more natural and intuitive human-robot collaboration.
   3. Expansion into New Domains
- **Healthcare**: Deep learning will advance personalized medicine, diagnostic tools, and drug discovery. Models will become more adept at analyzing medical images, genetic data, and patient records to provide tailored healthcare solutions.
- Finance: In finance, deep learning will be used for fraud detection, algorithmic trading, and risk management. Improved models will enhance predictive accuracy and decision-making processes.
   4. Ethical and Responsible AI
- Fairness and Bias Mitigation: Future research will focus on developing techniques to reduce bias in deep learning models and ensure fairness in AI systems. This will involve creating transparent and accountable AI solutions.
- Privacy Preservation: Methods like federated learning and differential privacy will become more prevalent, allowing models to be trained on decentralized data while preserving user privacy.
   5. Improved Natural Language Processing (NLP)
- **Contextual Understanding**: Advances in NLP will lead to models with better contextual understanding and generation capabilities, improving applications such as conversational agents, translation services, and content

<b>7</b> th Commenter	<b>Professional Elective (PE) III</b>	MOODICTOAA
7 <sup>th</sup> Semester	INTERNET OF THINGS	M23BIS704A

#### 1. Prerequisites

S/L	Proficiency	Prerequisites
1	Basic Science	Basic understanding of electronic components (e.g., resistors, capacitors, transistors). Knowledge of fundamental physics concepts like electricity, magnetism, and electromagnetic waves.
2	Mathematics	Familiarity with basic principles of energy conversion and signal processing. Proficiency in algebra, including solving linear and quadratic equations. Understanding of differential and integral calculus, including applications. Familiarity with probability, statistics, and matrix operations.
3	Computer Science	Experience with programming languages such as Python or C/C++. Basic understanding of data structures and algorithms. Knowledge of networking fundamentals, including TCP/IP, HTTP, and other relevant protocols.
4	Embedded Systems	Familiarity with microcontroller platforms like Arduino or Raspberry Pi. Experience with interfacing sensors and actuators to hardware platforms. Basic knowledge of embedded software development and debugging tools.
5	Communication Systems	Understanding of wireless communication technologies (e.g., Wi-Fi, Bluetooth, Zigbee). Familiarity with IoT communication protocols like MQTT, CoAP. Knowledge of basic networking and communication theory.

#### 2. Competencies

2. Con	npetencies	
S/L	Competency	KSA Description
1	Introduction to IoT	<ul><li>Knowledge: Understanding the evolution of IoT, enabling technologies, and key networking components.</li><li>Skills: Ability to identify and describe IoT components and addressing strategies.</li><li>Attitudes: Curiosity about the interdependence of technologies and a willingness to explore new concepts in IoT.</li></ul>
2	IoT Sensing and Actuation	<ul> <li>Knowledge: In-depth knowledge of various sensors and actuators, including their characteristics and types.</li> <li>Skills: Proficiency in selecting and interfacing sensors and actuators with IoT hardware platforms.</li> <li>Attitudes: Precision in sensor calibration and a problem-solving approach to handling sensorial deviations.</li> </ul>
3	IoT Processing Topologies	<ul> <li>Knowledge: Understanding of IoT processing topologies, data formats, and processing requirements.</li> <li>Skills: Ability to design and optimize IoT device processing strategies and make decisions on processing offloading.</li> <li>Attitudes: Attention to efficiency and optimization in processing design.</li> </ul>
4	IoT Connectivity Technologies	<ul> <li>Knowledge: Comprehensive knowledge of various IoT connectivity technologies (e.g., Zigbee, LoRa, NB-IoT, Wi-Fi, Bluetooth).</li> <li>Skills: Proficiency in selecting and configuring appropriate communication technologies for IoT applications.</li> <li>Attitudes: Proactiveness in learning and implementing emerging communication protocols and standards.</li> </ul>
5	IoT Case Studies and Future Trends	<ul> <li>Knowledge: Familiarity with the application of IoT in sectors like agriculture and transportation, and an understanding of future IoT trends.</li> <li>Skills: Ability to analyze case studies and draw insights for practical IoT applications.</li> <li>Attitudes: Open-mindedness toward new IoT trends and a desire to innovate.</li> </ul>

2023 Scheme - 7th to 8th Sem Competency Based Syllabi for B.E CSE

1	Week 1-3: Introduction to IoT	Introduction, Evolution of IoT, Enabling IoT and the Complex Interdependence of Technologies, IoT Networking Components, Addressing Strategies in IoT.
2	Week 4-6: IoT Sensing and Actuation	Introduction, Sensors, Sensor Characteristics, Sensorial Deviations, Sensing Types, Sensing Considerations, Actuators, Actuator Types, Actuator Characteristics.
3	Week 7-9: IoT Processing Topologies and Types	Data Format, Importance of Processing in IoT, Processing Topologies, IoT Device Design and Selection Considerations, Processing Offloading.
4	Week 10-11: IoT Connectivity Technologies	Introduction, IEEE 802.15.4, Zigbee, Thread, ISA100.11A, Wireless HART, RFID, NFC, DASH7, Z-Wave, Weightless, Sigfox, LoRa, NB-IoT, Wi-Fi, Bluetooth.
5	Week 12-14: IOT Future Trends and Hardware Projects	Introduction, Components of an agricultural IoT, Advantages of IoT in agriculture, Smart irrigation management system, Introduction to Vehicular IoT Components of vehicular IoT, Advantages of vehicular IoT. Introduction to Arduino Boards, LED interface with Arduino, LED interface with Arduino, MQ-2 Gas sensor interface with NodeMCU

#### **5.Teaching-Learning Process Strategies**

S/L	TLP Strategies:	Description
1	Lecture Method	Deliver structured lectures to introduce IoT concepts, architecture, protocols, and applications. Use clear explanations and real-life examples to reinforce learning.
2	Video/Animation	Incorporate visual aids like videos and animations to illustrate complex IoT systems, sensor interactions, and communication protocols, enhancing student understanding.
3	Collaborative Learning	Encourage collaborative learning for improved competency application.
4	Real-World Application	Incorporate case studies and practical examples of IoT applications, such as smart homes and industrial IoT, to connect theoretical concepts with real-world scenarios.
5	Flipped Class Technique	Implement a flipped classroom approach by providing pre-class resources (e.g., articles, videos) on IoT topics. Use class time for hands-on activities and deeper discussions.
6	Laboratory Learning	Conduct laboratory sessions where students work with IoT hardware platforms (e.g., Arduino, Raspberry Pi) to build and test IoT projects. Provide hands-on experience with sensor and actuator integration.
7	Guest Lectures/Workshops	Invite industry experts to deliver guest lectures or conduct workshops on emerging IoT technologies and trends. This provides students with insights into current industry practices and innovations.

#### 6.Assessment Details (both CIE and SEE) **Continuous Internal Evaluation:**

The minimum CIE marks requirement is 40% of maximum marks in each component.

#### **CIE Split up**

	Components	Number	Weightage	Max. Marks	Min. Marks
(i)	Internal Assessment-Tests (A)	2	50%	25	10
(ii)	Assignments/Quiz/Activity (B)	2	50%	25	10
	Total N	50	20		

**Final CIE Marks = (A) + (B)** Average internal assessment shall be the average of the 2 test marks conducted.

#### **Semester End Examination:**

Question paper pattern will be ten questions. Each question is set for 20marks. The medium of the question paper •

shall be English unless otherwise it is mentioned.

- There shall be 2 question from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have mix of topics under that module if necessary.
- The students have to answer 5 full questions selecting one full question from each module.
- Marks scored will be proportionally scaled down to 50 marks

S/L	Learning Objectives	Description					
1	Understand IoT Fundamentals	Understand the fundamentals of IoT, including its evolution, enabling technologies, key components, and addressing strategies					
2	Integration of Sensors and Actuators	Develop practical skills in interfacing various sensors and actuators with IoT hardware platforms like Arduino and Raspberry Pi, laying the foundation for building functional IoT projects.					
3	Analyze IoT Processing Techniques	Analyze different IoT processing topologies, data formats, and proc strategies, including processing offloading.					
4	Explore IoT Connectivity Technologies	Explore various IoT connectivity technologies and communication protocols, and understand their application in IoT systems.					
5	Study IoT Applications and Trends	Study case studies and future trends in IoT, focusing on agricultural and vehicular applications to understand practical uses and emerging developments					
6	Build and Implement IoT Projects	Build and implement practical IoT projects using hardware components, such as Arduino boards and sensors, to apply theoretical knowledge in real-world scenarios.					

### 8.Course Outcomes (COs) and Mapping with POs/ PSOs

COs	Description
M23BIS704A.1	Identify the evolution, networking components, addressing strategies and processing in IoT.
M23BIS704A.2	Apply different connectivity technologies.
M23BIS704A.3	Analyze various sensing devices and actuator types.
M23BIS704A.4	Examine the IOT Case Studies and Future Trends

#### 9.Assessment Plan

#### **Continuous Internal Evaluation (CIE)**

#### **10.Future with this Subject:**

- Embracing Advanced Tools: Expect to see IoT courses incorporating cutting-edge computational tools and software. These will help you simulate and design IoT systems more effectively, letting you experiment and refine your ideas before you bring them to life.
- **Incorporating Edge Computing and AI**: The future of IoT will likely include a focus on edge computing and artificial intelligence. This means learning how to build smarter systems that process data instantly and make intelligent decisions right at the edge, where the action happens.
- **Exploring Interdisciplinary Applications**: IoT isn't just about connecting devices—it's about solving realworld problems. You might find yourself integrating IoT with fields like smart cities, healthcare, or industrial automation, where you can see how your work impacts everyday life.
- Focusing on Security and Privacy: As IoT devices become more common, keeping them secure and protecting user privacy will be crucial. Courses will likely dive deep into the latest practices for safeguarding data and ensuring your IoT systems are secure against potential threats.
- Adapting to New Technologies: The IoT field is always evolving, with new technologies like 5G, blockchain, and advanced sensors emerging. Future learning will include these innovations, keeping you up-to-date and ready to tackle the newest challenges and opportunities in IoT.

#### 7<sup>th</sup>Semester Professional Course -III (PC) ETHICAL HACKING AND NETWORK DEFENSE M23BCS704B

#### 1. Prerequisites

S/L	Proficiency	Prerequisites
1.	Operating Systems	Familiarity with Windows, Linux, and macOS.
2.	Networking	Understanding of TCP/IP, subnetting, network masks, and common networking protocols.
3.	Cyber security Fundamentals	Basic understanding of information security principles and practices. Knowledge of common threats, vulnerabilities, and attack vectors.
4.	Programming Skills	Ability to write scripts to automate tasks and exploit vulnerabilities.

#### 2. Competencies

S/L	Competency	KSA Description
1.	Basics of Ethical Hacking Techniques	<ul> <li>Knowledge: <ul> <li>Familiarity with reconnaissance, exploitation, and post-exploitation techniques.</li> <li>Awareness of cybersecurity laws, regulations, and ethical hacking guidelines.</li> </ul> </li> <li>Skills: <ul> <li>Proficiency in using tools like Nmap, Wireshark, Metasploit, and Burp Suite for ethical hacking.</li> <li>Ability to ensure compliance with legal standards and ethical practices.</li> </ul> </li> <li>Attitudes: <ul> <li>Integrity and a strong sense of ethical responsibility and adherence to legal guidelines.</li> </ul> </li> </ul>
2.	Embedded Systems, Networking Fundamentals & Cryptography	<ul> <li>Knowledge: <ul> <li>Familiarity with Windows, Linux, and macOS operating systems.</li> <li>Understanding of TCP/IP, DNS, DHCP, subnetting, and common networking protocols.</li> <li>Understanding of cryptographic principles such as public-key cryptography, cryptographic hashing, and digital signatures.</li> </ul> </li> <li>Skills: <ul> <li>Proficiency in using command-line interfaces, managing system processes, and configuring system settings.</li> <li>Ability to configure and troubleshoot network devices, analyze network traffic, and understand network topologies.</li> <li>Implement cryptographic algorithms like Secret Key Cryptography (SKC), Public Key Cryptography (PKC) &amp; Hash Functions.</li> </ul> </li> <li>Attitudes: <ul> <li>Willingness to explore and experiment with different operating systems.</li> <li>Curiosity and a proactive approach to learning about network infrastructures.</li> </ul> </li> </ul>
3.	Defensive Strategies	<ul> <li>Knowledge: Understanding of firewalls, intrusion detection/prevention systems</li> <li>(IDS/IPS), and endpoint security solutions.</li> <li>Skills: Ability to configure and manage security devices, monitor network traffic, and respond to security incidents.</li> <li>Attitudes: Proactive and defensive mindset towards protecting systems and networks.</li> </ul>

	ty with reconnaissance, exploitation		
Fundamentals of Awarene	ss of cybersecurity laws, regulatio	ns, and ethical hacking guid	lelines.

1	Ethical hacking & Operating systems	Familiarity with Windows, Linux, and macOS operating systems.
2	Week 3-4: Networking Primer	Understanding of TCP/IP, DNS, DHCP, subnetting, and common networking protocols. Understanding of cryptographic principles such as public-key cryptography, cryptographic hashing, and digital signatures.
3	Week 5-6: Techniques for Network Intrusion Detection System	Understanding of firewalls, intrusion detection/prevention systems (IDS/IPS), and endpoint security solutions.

2023 Scheme - 7th to 8th Sem Competency Based Syllabi for B.E CSE

5.	5. Teaching-Learning Process Strategies							
S/L	TLP Strategies:	Description						
1	Lecture Method	Utilize various teaching methods within the lecture format to reinforce competencies.						
2	Video/Animation	Incorporate visual aids like videos/animations to enhance understanding of concepts.						
3	Collaborative Learning	Encourage collaborative learning for improved competency application.						
4	Higher Order Thinking (HOTS) Questions:	Pose HOTS questions to stimulate critical thinking related to each competency.						
5	Problem-Based Learning (PBL)	Implement PBL to enhance analytical skills and practical application of competencies						
6	Multiple Representations	Introduce topics in various representations to reinforce competencies						
7	Real-World Application	Discuss practical applications to connect theoretical concepts with real-world competencies.						
8	Flipped Class Technique	Utilize a flipped class approach, providing materials before class to facilitate deeper understanding of competencies						
9	Programming Assignments	Assign programming tasks to reinforce practical skills associated with competencies.						

#### 6. Assessment Details (both CIE and SEE)

The Weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 40% of the maximum marks (20 marks out of 50). A student shall be deemed to have satisfied the academic requirements and earned the credits allotted to each subject/ course if the student secures not less than 35% (18 Marks out of 50) in the semester-end examination(SEE), and a minimum of 40% (40 marks out of 100) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together

#### **Continuous Internal Evaluation:**

	Components	Number	Weightage	Max. Marks	Min. Marks
(i)	Internal Assessment-Tests (A)	2	50%	25	10
(ii)	Assignments/Quiz/Activity (B)	25	10		
	Total Marks	50	20		

#### Final CIE Marks = (A) + (B)

Average internal assessment shall be the average of the 2 test marks conducted.

CIE methods /question paper is designed to attain the different levels of Bloom's taxonomy as per the outcome defined for the course.

#### Semester End Examination:

Theory SEE will be conducted as per the scheduled timetable, with common question papers for the subject (duration 03 hours)

- 1. Question paper pattern will be ten questions. Each question is set for 20marks. The medium of the question paper shall be English unless otherwise it is mentioned.
- 2. There shall be 2 questions from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have mix of topics under that module if necessary.
- 3. The students have to answer 5 full questions selecting one full question from each module.
- 4. Marks scored will be proportionally scaled down to 50 marks

#### 7. Learning Objectives

#### 2023 Scheme - 7th to 8th Sem Competency Based Syllabi for B.E CSE

S/L	Learning Objectives	Description					
	Understanding	Students will grasp the fundamental concepts of ethical hacking, including Life Cycle of					
1	Ethical Hacking	Ethical Hacking, Types of Ethical Hacking, Fundamentals of Vulnerability Analysis and					
	Fundamentals	Penetration Testing.					
	Understanding	Students will grasp the fundamental concepts of Network Attack and Defense techniques					
2	Network Attack and	and can perform Vulnerability and Penetration testing on given Vulnerable system as					
	Defense	generate report.

4	Communication	communicate effectively, share ideas, and solve problems collectively.					
	Skills	communicate effectively, share ideas, and solve problems conectively.					
	Ethical and	Students will understand the ethical and professional responsibilities associated with digital					
5	Professional	design, including respecting intellectual property rights, ensuring design reliability and					
	Responsibility	security, and adhering to industry standards and best practices.					

# 8. Course Outcomes (COs) and Mapping with POs/ PSOs Course Outcomes (COs)

COs	Description
M23BCS704B.1	To understand how to find security vulnerabilities in given system.
M23BCS704B.2	To suggest the remediation steps for identified security bugs.
M23BCS704B.3	To perform VAPT task on given system and submit professional report.
M23BCS704B.4	To demonstrate knowledge of Embedded OS and vulnerabilities.
M23BCS704B.5	To demonstrate knowledge of IDS Systems and IDS signatures.

Total	20	20	20	20	20	100

#### **Conditions for SEE Paper Setting:**

Each module of SEE question paper should be allocated with questions for 20% of the total SEE marks

#### **10. Future with this Subject**

The **"Ethical Hacking and Network Defense"** course in the - semester of the B.E program lays a strong foundation for several future courses in the undergraduate program. The contributions of this subject extend across various areas, enhancing the students' understanding and skills in the field of cyber security. Here are some notable contributions:

- Innovation and Research: Working with the latest technologies and tools in cybersecurity. Engaging in research to develop new methods and tools for defending against cyber threats.
- **Continuous Learning:** Cybersecurity is a rapidly evolving field, requiring continuous learning and adaptation to new threats and technologies. Playing a crucial role in protecting sensitive data and maintaining the integrity of information systems.
- **Global Opportunities:** With the increasing number of cyber threats, there is a high demand for skilled cybersecurity professionals. Opportunities are available in various sectors including finance, healthcare, government, and technology.

<b>a</b> th c	Professional Elective -III (PE)	
7 <sup>th</sup> Semester	DIGITAL IMAGE PROCESSING	M23BIS704C

#### 1. Prerequisites

S/L	Proficiency	Prerequisites
		Algorithms and Data Structures: Understanding fundamental algorithms and data
	Basic Computer	structures, as they are important for implementing efficient image processing
1	Science	algorithms.
	Concepts	Complexity Analysis: Knowledge of time and space complexity to evaluate the
		efficiency of image processing algorithms.
		Digital Image Fundamentals: Understanding the nature of digital images,
2	Image Basics	including pixels, color models (RGB, HSV, etc.), and image formats.
		Image Representation: Concepts of image resolution, bit depth, and color spaces.
		Algorithms and Data Structures: Understanding fundamental algorithms and data
	Basic Computer	structures, as they are important for implementing efficient image processing
3	Science	algorithms.
	Concepts	Complexity Analysis: Knowledge of time and space complexity to evaluate the
		efficiency of image processing algorithms.
	Mathematics	Linear Algebra: Concepts like matrices, vectors, eigenvalues, and eigenvectors are
		crucial for understanding image transformations and filtering.
4		Calculus: Differential calculus for gradient-based methods and integral calculus for
		operations like convolution.
		<b>Probability and Statistics</b> : Essential for understanding noise modeling, image
		analysis, and algorithms based on statistical methods.
		<b>Discrete Signals</b> : Understanding how to work with discrete signals, which is analogous to working with digital images.
	Signal	<b>Fourier Transform</b> : Knowledge of the Fourier Transform and its discrete
5	Processing	counterpart (DFT) for frequency domain analysis of images.
	Theessing	<b>Filtering</b> : Basic concepts of filtering in the spatial and frequency domains,
		including convolution and correlation.
		<b>Programming Languages:</b> Proficiency in languages like Python, MATLAB, or
		C/C++ which are commonly used for implementing image processing algorithms.
6	Programming	<b>Libraries and Tools</b> : Familiarity with image processing libraries and tools such as
0	Skills	OpenCV (for C++ and Python), scikit-image (Python), or MATLAB's Image
1		Processing Toolbox.
L		

#### 2. Competencies

S/L	Competency	KSA Description
1	Understanding of Digital Image Fundamentals	<ul> <li>Knowledge:</li> <li>Knowledge of how images are represented digitally, including pixel values, color models (RGB, grayscale, etc.), and image formats</li> <li>Skills:</li> <li>Ability to evaluate image quality using metrics such as PSNR (Peak Signal-to-Noise Ratio), MSE (Mean Squared Error), and structural similarity index.</li> <li>Attitudes:</li> <li>User interaction</li> </ul>
2	Mathematical Foundations	<ul> <li>Knowledge:</li> <li>Proficiency in matrix operations, eigenvalues, and eigenvectors, as they apply to image transformations and filtering.</li> <li>Skills:</li> <li>Understanding of differentiation and integration for gradient-based methods and convolution operations.</li> <li>Attitudes:</li> <li>Ability to apply statistical methods for noise modeling, image analysis, and algorithm evaluation</li> </ul>

3	Image Processing Fundamentals	<ul> <li>Knowledge:</li> <li>Understanding how images are stored and represented digitally (e.g., pixels, color models like RGB and CMYK).</li> <li>Skills:</li> <li>Applying various filters (e.g., blurring, sharpening) and understanding convolution operations.</li> <li>Attitudes:</li> <li>Implementing geometric transformations such as scaling, rotation, and translation.</li> </ul>
4	Image Segmentation	<ul> <li>Knowledge: Techniques for segmenting images based on intensity levels.</li> <li>Skills: Applying methods like k-means or mean-shift for segmenting images into distinct regions.</li> <li>Attitudes: Approaches like region growing or watershed for more complex segmentation tasks.</li> </ul>
5	Computer Vision	<ul> <li>Knowledge: Proficiency with image processing libraries such as OpenCV, PIL/Pillow, scikit- image, or TensorFlow/Keras for deep learning</li> <li>Skills: Familiarity with programming languages commonly used in image processing, like Python, C++, or MATLAB.</li> <li>Attitudes: Using image processing for visual perception in robotics applications.</li> </ul>

#### 3. Syllabus

	I IMACD DDOCESSINC		]						
	DIGITAL IMAGR PROCESSING SEMESTER – VII								
Course Code	M23BIS704C	CIE Marks	50						
Number of Lecture Hours/Week(L: T: P: S)	(3:0:0:0)	SEE Marks	50						
Total Number of Lecture Hours	40 hours Theory	Total Marks	100						
Credits	03	Exam Hours	03						
Course objectives:									
• Understand the fundamentals of digital ir	nage processing.								
• Understand the image transforms used in									
• Understand the image enhancement tech		ssing.							
• Understand the image restoration techniq									
• Understand the Morphological Operation		• • •							
	Module-1								
Digital Image Fundamentals: What is Digital Ir of fields that use DIP, Fundamental Steps in System, Elements of Visual Perception, Image (Text: Chapter 1 and Chapter 2: Sections 2.1 to	Digital Image Processing, Composing and Acquisition.								
Image Enhancement in the Spatial Domain: between Pixels, Linear and Nonlinear Operati Processing, Fundamentals of Spatial Filter (TextzChapterZ: Sections 2.3 to 2.62, Chapter2	ons. Some Basic Intensity Transf ring, Smoothing Spatial Filters	ormation Functi	ons, Histogram						
Frequency Domain: Preliminary Concepts, The	Discrete Fourier Transform (DFT)	) of Two Variabl	es, Properties						
of the 2-DDFT, Filtering in the Frequency Dor			sing Frequency						
Domain Filters, Selective Filtering. (Text: Cha	pter4: Sections 4.2, 4.5 to 4.10), L	1,L2							
	Module-4								

Restoration: Noise models, Restoration in the Presence of Noise Only using Spatial Filtering and Frequency Domain Filtering, Linear, Position-Invariant degradations Estimating the Degradation Function, Inverse Filtering, Minimum Mean Square Error (Wiener) Filtering, Constrained Least Squares Filtering. (Text: Chapter 5: Sections 5.2, to 5.9) L1,L2

Module-5

Morphological Image Processing: Preliminaries, Erosion and Dilation, Opening and Closing. Image Processing: Color Fundamentals, Color Models, Pseudo color Image Processing.

Text: Chapter 6: Sections 6.1 to 6.3 Chapter 9: Sections9.1to9.3) L1,L2

Text Book(s)

- 1. Digital Image Processing- Rafel C Gonzalez and Richard E. Woods, PHI3" Edition 2010
- 2. Digital Image Processing- S. J ayaraman, S. Esakkiraj an, T. Veerakumar, Tata Mc Graw Hill 2014.
- 3. Fundamentals of Digital Image Processing- A. K. Jain, Pearson 2004.
- 4. Image Processing analysis and Machine Vision with Mind Tap by Milan Sonka and Roger Boile, Cengage Publications, 2018.

#### 4.Syllabus Timeline

S/L	Syllabus Timeline	Description
1	Week 1-3: Module 1	What is Digital Image Processing? Origins of Digital Image Processing, Examples of fields that use DIP, Fundamental Steps in Digital Image Processing, Components of an Image Processing System, Elements of Visual Perception, Image Sensing and Acquisition
2	Week 3-7: Module 2	Image Sampling and Quantization, Some Basic Relationships between Pixels, Linear and Nonlinear Operations. Some Basic Intensity Transformation Functions, Histogram Processing, Fundamentals of Spatial Filtering, Smoothing Spatial Filters, Sharpening Spatial Filters
3	Week 7-11: <b>Module 3</b>	Preliminary Concepts, The Discrete Fourier Transform (DFT) of Two Variables, Properties of the 2-DDFT, Filtering in the Frequency Domain, Image Smoothing and Image Sharpening Using Frequency Domain Filters, Selective Filtering.
4	Week 10-12: <b>Module 4</b>	Noise models, Restoration in the Presence of Noise Only using Spatial Filtering and Frequency Domain Filtering, Linear, Position-Invariant degradations Estimating the Degradation Function, Inverse Filtering, Minimum Mean Square Error(Wiener) Filtering, Constrained Least Squares Filtering.
5	Week 12-15: <b>Module 5</b>	Preliminaries, Erosion and Dilation, Opening and Closing. Image Processing: Color Fundamentals, Color Models, Pseudo color Image Processing.

#### **5.Teaching-Learning Process Strategies**

S/L	TLP Strategies:	Description
1	Project-Based Learning	Design courses around real-world projects that students can work on individually or in teams.

2023 Scheme - 7th to 8th Sem Competency Based Syllabi for B.E CSE

2	Design Sprints	Incorporate design sprints to teach students the iterative process of prototyping, testing, and refining designs.
3	Empathy Exercises	Implement activities that help students develop empathy for users, such as user persona creation and journey mapping.
4	Higher Order Thinking (HOTS) Questions:	Pose HOTS questions to stimulate critical thinking related to each competency.
5	Team Projects	Promote collaboration through group projects that mimic real-world team dynamics.
6	Peer Reviews	Encourage peer reviews and critiques to develop critical thinking and feedback skills.
7	Guest Speakers	Invite industry professionals to share their experiences and insights.

#### 6. Assessment Details (both CIE and SEE)

The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 40% of the maximum marks (20 marks out of 50). A student shall be deemed to have satisfied the academic requirements and earned the credits allotted to each subject/ course if the student secures not less than 35% (18 Marks out of 50) in the semester-end examination(SEE), and a minimum of 40% (40 marks out of 100) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together

#### **Continuous Internal Evaluation:**

Com	ponents	Number	Weightage	Max. Marks	Min. Marks
(i)	Internal Assessment-Tests (A)	2	50%	25	10
(ii)	Assignments/Quiz/Activity (B)	2	50%	25	10
	Total Marks	50	20		

Final CIE Marks = (A) + (B)

Average internal assessment shall be the average of the 2 test marks conducted.

# CIE methods /question paper is designed to attain the different levels of Bloom's taxonomy as per the outcome defined for the course.

Semester End Examination:

Theory SEE will be conducted as per the scheduled timetable, with common question papers for the subject (duration 03 hours)

- 1. Question paper pattern will be ten questions. Each question is set for 20marks. The medium of the question paper shall be English unless otherwise it is mentioned.
- 2. There shall be 2 question from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have mix of topics under that module if necessary.
- 3. The students have to answer 5 full questions selecting one full question from each module.
- 4. Marks scored will be proportionally scaled down to 50 marks

S/L	Learning Objectives	Description						
1	Fundamental Concepts and Theory	Describe how digital images are represented, including concepts like pixels, color models (RGB, CMYK), and image resolution. Students will be able to explain how digital images are stored and processed, including the impact of different color models and image resolutions on image quality.						
2	Image Enhancement and Restoration	Implement techniques to improve the quality of an image, including histogram equalization, contrast stretching, and filtering. Students will be able to apply various enhancement techniques to improve the visual appearance of images.						
3	Image Transformations	Explain and apply image transformations in both spatial and frequency domains, including Fourier transform and discrete cosine transform.						

#### 7.Learning Objectives

2023 Scheme – 7th to 8th Sem Competency Based Syllabi for B.E CSE

		Students will understand and use transformations to analyze and process images in different domains for various applications.
4	Advanced Image Processing Techniques	Use machine learning and artificial intelligence techniques for advanced image processing tasks, such as object recognition and classification. Students will be able to integrate AI and machine learning methods to enhance image processing capabilities and automate complex tasks.
5	Ethical and Social Implications	Discuss the ethical considerations related to image processing, including privacy concerns and the responsible use of image manipulation technologies. Students will be aware of the ethical implications and social impact of image processing technologies.

#### 2. Course Outcomes (COs) and Mapping with POs/ PSOs Course Outcomes (COs)

COs	Description						
M23BIS704C.1	Understand & Apply basic concepts of digital image processing & its applications						
M23BIS704C.2	Illustrate the use of image enhancement technique using Spatial and frequency domain for various image transformations.						
M23BIS704C.3	Infer image compression standards, segmentation and representation techniques.						
M23BIS704C.4	Analyze basic image processing algorithms for specific applications.						

#### **CO-PO-PSO Mapping**

COs/POs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

2023 Scheme - 7th to 8th Sem Competency Based Syllabi for B.E CSE

Module-5			10	10	20
Total	14	34	32	20	100

## 10 Future with this Subject

## 1. Advancements in Artificial Intelligence and Machine Learning

- **AI-Enhanced Processing**: Machine learning and deep learning algorithms will continue to revolutionize image processing, enabling more sophisticated tasks such as object detection, facial recognition, and image classification. AI-driven techniques will improve accuracy and efficiency in processing and analyzing images.
- Automated Image Analysis: Automation in image analysis will become more prevalent, with AI systems capable of automatically identifying patterns, anomalies, and features in images, reducing the need for manual intervention.

## 2. Increased Integration with Augmented and Virtual Reality (AR/VR)

- AR and VR Applications: Digital image processing will play a crucial role in enhancing AR and VR experiences by improving image quality, depth perception, and real-time rendering. This will enable more immersive and interactive applications in gaming, training, and simulation.
- **Real-Time Image Processing**: Advances in real-time image processing will be critical for seamless AR/VR experiences, allowing for instant feedback and interaction with virtual environments.

## 3. Growth of Multidimensional and 3D Imaging

- **3D Imaging and Reconstruction**: The use of 3D imaging technologies will expand, with applications in medical imaging, manufacturing, and entertainment. Digital image processing will advance in handling and analyzing complex 3D data for improved accuracy and visualization.
- **Multidimensional Data Analysis**: Processing of multidimensional data (such as hyperspectral or multispectral imaging) will become more common, providing deeper insights into various fields, including agriculture, environmental monitoring, and materials science.

## 4. Enhanced Medical Imaging

- **Precision Medicine**: Digital image processing will continue to advance in medical imaging, enabling more precise diagnostics and personalized treatment plans. Innovations such as advanced MRI, CT scans, and PET imaging will benefit from improved image quality and analysis.
- **Early Detection and Diagnosis**: AI-powered image processing will enhance the early detection and diagnosis of diseases by analyzing medical images with higher accuracy and speed.

1	Basic Computer Skills	Basic computer skills, such as saving files in multiple ver	Basic computer skills, such as saving files in multiple versions and formats.					
2	Programming basic tools	flowchart, algorithms which can be used to form a progra	Familiar with Programming tools like assemblers, compilers, linkers translate, flowchart, algorithms which can be used to form a program from a human write-able and readable source language into the bits and bytes that can be executed by a computer.					
3	Programming Fundamentals	Familiar with general coding concepts like variables, basic data types, Condition Statements, Looping, Functions, creation of source file, compilation process, progra execution techniques.						
4	Basic Object Orientation Concepts	Basic of four basic principles: encapsulation, inheri abstraction. Where these four OOP principles can be used collaborate to create powerful applications too.						

## 2. Competencies

	2. Competencies	
S/L	Competency	KSA Description
1.	Understanding basic User Interface Design	<ul> <li>Knowledge:</li> <li>Importance of User Interface Design for any application.</li> <li>Understanding of the basics of User Interface Design.</li> <li>Skills:</li> <li>Ability to know the basic principles of Interface Design for the Users.</li> <li>Attitudes:</li> <li>Appreciation to understand the importance of Interface Design and implement the same with respect to user's perspective.</li> </ul>
2.	Design Process: Requirement Analysis	<ul> <li>Knowledge:</li> <li>Understanding of the need of requirement analysis before any design is to be made.</li> <li>Principles of Requirement Analysis and techniques.</li> <li>Skills:</li> <li>Steps to understand with proper guidelines to collect the requirements for the design.</li> <li>Attitudes:</li> <li>Appreciation for the procedure to gather the appropriate requirements for the design.</li> </ul>
3.	Design Process: Business Function & Screen Design	<ul> <li>Knowledge:</li> <li>Understanding the basic business functions with respect to user interface design.</li> <li>Importance of Screen Design.</li> <li>Skills:</li> <li>Defining appropriate Business Protocols and strategies.</li> <li>Designing of Screen Elements to produce Good Screen Design.</li> <li>Attitudes:</li> <li>Valuing the importance of Business Strategies and Screen Design which is appropriate for different types of Users.</li> </ul>
4.	Design Process: Menus	<ul> <li>Knowledge:</li> <li>Understanding the importance of Menus and its items for user interaction.</li> <li>Skills:</li> <li>Applying Guidelines of Menu Design and its Items to create proper structure of menu usage.</li> <li>Attitudes:</li> <li>Creativeness to design the menu and its items for effective usage.</li> </ul>
5.	Design Process: Window	Knowledge: Understanding of issues and structures of windows and its types Skills:

		Constructing window structure to suit the best design for the elements of the screen for user interaction.
		Attitudes:
		Appreciation for the way types of windows can be designed and used with good
		design.
		Knowledge:
		Understanding the characteristics and importance of Screen Controls.
6.	Design Process:	Skills:
0.	Controls	Designing and analyzing the appropriate Screen Controls.
		Attitudes:
		Recognizing the significance of screen controls.
		Knowledge:
		Understanding the importance of Testing.
7.	Design Process: Tests	Skills:
<i>'</i> .	Design Process. Tesis	Designing and analyzingelements of the screen through testing.
		Attitudes:
		Valuing the importance of Testing and Re-Testing

## **REFERENCE BOOKS:**

1. Alan Cooper, "The Essential of User Interface Design", Wiley- Dream TechLtd., 2002.

## 4. Syllabus Timeline

S/L	Syllabus Timeline	Description
1	Week 1-3: Introduction to User Interface	Understanding the importance of User Interface design and Defining the User Interface, get to know the history of the Human-Computer Interface with Direct Manipulation and indirect manipulation along with the Characteristics of a Web Interface.
2	Week 4-6: Requirement Analysis for Design Process	Understanding the initial step of User Interface Design Process by knowing the Obstacles and Pitfalls in the Development Path and how People should be involved in the Designing process.
3	Week 7-8: Business Functions in Design Process	Understand the Business Function and Business Definition with Design standards with the importance of Good Screen Design by considering Human interaction in the process.
4	Week 9-10: Menus in Design Process	To Understand about Menus with its Structures, Functions, Contents, Formatting, Phrasing, Selection of Menu Items and Navigationof Menus with its Kinds.
5	Week 11-12: Windows, Controls and Test in Design Process	Selection of Proper Kinds of Windows by knowing the Window Characteristics with its Components and the styles to present it, Device Controls which can be used with Proper Screen Based Controls and Finally how Windows Tests-prototypes can be conducted knowing the kinds of tests.

## **5. Teaching-Learning Process Strategies**

S/L	TLP Strategies:	Description
1	Lecture Method	Utilize various teaching methods within the lecture format to reinforce competencies.
2	Image/Video/Animation	Incorporate visual aids like image/videos/animations to enhance understanding of programming constructs.
3	Collaborative Learning	Encourage collaborative learning for improved competency application.
4	Higher Order Thinking (HOTS) Questions:	Pose HOTS questions to stimulate critical thinking related to each competency.
5	Group-Based Learning (GBL)	Implement GBL to enhance analytical skills and Design Skills
6	Real-World Application	Discuss practical applications to connect theoretical concepts with real- world competencies.
8	Flipped Class Technique	Utilize a flipped class approach, providing materials before class to facilitate deeper understanding of competencies

## 6.Assessment Details (both CIE and SEE)

### **Continuous Internal Evaluation:**

This section of regulations is applicable to all theory-based courses. The minimum CIE marks requirement is 40% of maximum marks in each component.

## CIE Split up

	Components	Number	Weightage	Max. Marks	Min. Marks					
(i)	Internal Assessment-Tests (A)	2	50%	25	10					
(ii)	Assignments/Quiz/Activity (B)	2	50%	25	10					
	TotalM	50	20							
	$\mathbf{E}^{*} = \mathbf{I} \mathbf{O} \mathbf{E} \mathbf{M} = \mathbf{I} \mathbf{O} \mathbf{I} \mathbf{O} \mathbf{O} \mathbf{I}$									

FinalCIE Marks = (A) + (B)

Average internal assessment shall be the average of the 2 test marks conducted.

## Semester End Examination:

- 1. Question paper pattern will be ten questions. Each question is set for 20marks. The medium of the question paper shall be English unless otherwise it is mentioned.
- 2. There shall be 2 questions from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have mix of topics under that module if necessary.
- 3. The students have to answer 5 full questions selecting one full question from each module.
- 4. Marks scored will be proportionally scaled down to 50 marks.

7. L	earning Objectives	
S/L	Learning Objectives	Description
1	Understanding and applying the basic User Interface Design	Students will grasp the fundamental concepts of User Interface Design by applying the basic elements of the design.
2	Applying the System Requirements during Design Process	Students will apply strategies for requirement analysis as part of the design process.
3	Analyse the Business Function & Screen Layouts	Students will become analyse the Business functions with respect to User Interface Design and uses the appropriate Screen Design.
4	Implement the appropriate Menus	Students will implement various types of Menus and its usage while designing the screen elements.
5	Examine the Design Process with Window, Controls and Tests	Students will examineWindow and its element design with proper device controllables. Later the design test and retest process applications.

## 8. Course Outcomes (COs) and Mapping with POs/ PSOs

<b>Course Outcome</b>	s (COs)					
Cos	Description

## **10. Future with this Subject:**

- Advanced UserInterface Design Courses: The knowledge gained in this course, covering principles of Design and Human Interaction Can is used to have more advanced complete design courses.
- User-Centric Design: Companies are prioritizing user-centric design to differentiate themselves in a competitive market, leading to increased demand for UI/UX professionals.
- Mobile and Web Applications: The proliferation of mobile devices and web applications has created a need for well-designed interfaces that provide seamless experiences across various platforms.
- Emerging Technologies: As emerging technologies like AI, AR/VR, and voice interfaces become more prevalent, UI/UX designers will be needed to create intuitive and engaging experiences.
- Accessibility and Inclusive Design: There is a growing focus on designing products that are accessible to all users, including those with disabilities, opening up opportunities for UI/UX professionals with expertise in inclusive design.
- Continuous Iteration and Improvement: The iterative nature of UI/UX design means that there will always be a need for designers to collect user feedback, analyze data, and make improvements to existing products.
- Project Work and Research: The hands-on experience gained through design process and its fundamentals can be utilized to design front-end of project work.
- Industry Applications: The course provides some fundamentals and guidelines which can be used in realtime project works.

2023 Scheme -	- 7th to 8th Sem	Competency	Based Syllabi	for B.E CSE

	7 <sup>th</sup> semester		Professional Elective-IV (PE) Quantum Computing	M23BCS705A			
1	. Prere	equisites					
	S/L	Proficiency	Prere	quisites			
	1	Linear Algebra	Essential for understanding quantum states, gates, and transformations. Proficiency in vector spaces, matrices, eigenvalues, eigenvectors, and tensor products.				
	2	Probability Theory	Necessary for understanding quantum measurements and probability amplitudes. Proficiency in basic probability concepts is required.				
	3	Complex Numbers	Fundamental for quantum state representation. Proficiency in complex arithmetic and complex plane visualization.				
	4	Algorithms	Required for understanding classical algorithms before quantum ones. Proficiency in designing and analyzing classical algorithms.				
	5	Programming	Essential for implementing quantum algorithms. Proficiency in Python and familiarity with quantum programming frameworks like Qiskit.				

#### 2. Competencies

S/L	Competency	KSA Description
1	Quantum Computing Concepts	<ul> <li>Knowledge:</li> <li>Understand and articulate the fundamental principles of quantum mechanics, such as superposition, entanglement, and quantum interference, and how they apply to quantum computing.</li> <li>Skills:</li> <li>Demonstrate proficiency in designing, simulating, and optimizing quantum algorithms using quantum programming languages.</li> <li>Attitudes:</li> <li>Adopt amindset for applying quantum computing techniques to real-world challenges in areas like cryptographyand artificial intelligence.</li> </ul>
2	Problem-solving Skills	<ul> <li>Knowledge:</li> <li>Understand the potential of quantum computing to solve complex problems faster than classical computers, including problems related to cryptography, optimization, and data analysis.</li> <li>Skills:</li> <li>Demonstrate the ability to design and implement quantum algorithms that address specific problems, utilizing quantum principles like superposition and entanglement to optimize solutions.</li> <li>Attitudes:</li> <li>Adopt a creative and critical approach to problem-solving, exploring innovative quantum computing solutions to real-world challenges in fields such as machine learning, logistic</li> </ul>
3	Critical Thinking	Knowledge:Understand the theoretical foundations of quantum computing and itslimitations, including the challenges of noise, decoherence, and errorcorrection in quantum systems.Skills:Demonstrate the ability to critically analyze and evaluate quantum algorithmsand quantum hardware, identifying potential issues and improvements formore efficient solutions.Attitudes:Cultivate a mindset of curiosity and skepticism, continuously questioningassumptions and exploring innovative approaches to overcome challenges inthe development of quantum te
4	Mathematical Foundations	Knowledge: Understand the mathematical principles underlying quantum computing, including linear algebra, complex numbers, probability theory, and quantum state representation. Skills:

		Demonstrate the ability to apply mathematical tools to model quantum systems, analyze quantum algorithms, and solve problems related to qubits, quantum gates, and entanglement. Attitudes: Adopt a detail-oriented approach to problem-solving, valuing precision and accuracy in mathematical modeling to ensure the correct application of quantum computing concepts.
5	Classical Computing Fundamentals	<ul> <li>Knowledge:</li> <li>Understand the core principles of classical computing, including algorithms, data structures, and computational complexity, and how they contrast with quantum computing concepts.</li> <li>Skills:</li> <li>Demonstrate the ability to apply classical computing knowledge to identify the limits of classical systems and determine when quantum computing provides a potential advantage.</li> <li>Attitudes:</li> <li>Adopt an interdisciplinary mindset, recognizing the complementary roles of classical and quantum computing in solving complex problems and driving technological advancements.</li> </ul>

## 3. Syllabus

Quantum Computing SEMESTER – VII							
Course Code M23BCS705A CIE Marks 50							
Number of Lecture Hours/Week(L: T: P: S)	(3:0:0:0)	SEE Marks	50				
Total Number of Lecture Hours40 HoursTotal Marks100							
Credits 03 Exam Hours 03							
Course objectives: This course will enable stude	ata to:						

Course objectives: This course will enable students to:

1. Understanding of the basic principles of Quantum Computing and Information.

2. Understand the Quantum Operations and Quantum Gates.

3. Understand the basic features of Quantum Coding and Algorithms.

4. Understand the Quantum Computational Complexity and Error Correction.

Module -1

**Foundation:** Overview – Church-Turing Thesis – The circuit model of computation – reversible computation – quantum physics – quantum physics and computation – Dirac notation and Hilbert Spaces – dual vectors – operators – the spectral theorem – functions of operators – tensor products – Schmidt decomposition theorem. Textbook 1- Chapter 1(1.1,1.2,1.3,1.5,1.6,1.7) Chapter 2 (2.1,2.2,2.3,2.4,2.5,2.6,2.7)

#### Module -2

**Qubits and Quantum Model of Computation Management**: State of a quantum system – time evolution of a closed system – composite systems – measurement – mixed states and general quantum operations – quantum circuit model – quantum gates – universal sets of quantum gates – unitary transformations – quantum circuits. Textbook 1-Chapter 3(3.1,3.2,3.3,3.4,3.5) Chapter 4(4.1,4.2,4.3,4.4,4.5)

Module -3

**Quantum Algorithms - 1:** Superdense coding – quantum teleportation – applications of teleportation – probabilistic versus quantum algorithms – phase kick-back – the Deutsch algorithm – the Deutsch - Jozsa algorithm – Simons algorithm – Quantum phase estimation and quantum Fourier Transform – eigenvalue estimation.

Textbook 1-Chapter 5(5.1,5.2,5.3) Chapter 6(6.1,6.2,6.3,6.4,6.5) Chapter 7(7.1,7.2)

Module -4

**Quantum Algorithms - 2:** Order-finding problem – eigenvalue estimation approach to order finding – Shor's algorithm for order finding – finding discrete logarithms – hidden subgroups – Grover's quantum search algorithm – amplitude amplification – quantum amplitude estimation – quantum counting – searching without knowing the success probability.

Textbook 1-Chapter 7(7.3.1,7.3.3,7.3.4,7.4,7.5) Chapter 8(8.1-8.4)

Module -5

Quantum Computational Complexity and Error Correction: Computational complexity – black-box model
– lower bounds for searching – general black-box lower bounds – polynomial method – block sensitivity –
adversary methods – classical error correction – classical three-bit code – fault tolerance – quantum error
correction – three- and nine-qubit quantum codes – fault-tolerant quantum computation.
Textbook 1-Chapter 9(9.1-9.7) Chapter 10(10.1-10.6)
Text Books:

1. Phillip Kaye, R. Laflamme, and M. Mosca, "An Introduction to Quantum Computing", Oxford University Press, 2007.

2. V. Sahni, "Quantum Computing", Tata McGraw-Hill Publishing Company, 2007.

#### **Reference Books:**

1.Quantum Computing and Quantum Information, Michael A. Nielsen & Isaac L. Chuang, 10<sup>th</sup>Anniversary edition, Cambridge University Press, 2010.

3. Quantum Computing by Parag Lala, McGraw-Hill, Indian Edition, Reprint 2020.

#### 4. Syllabus Timeline

S/L	Syllabus	Description
5/12	Timeline	-
1	Week 1-2	Overview Church-Turing Thesis The circuit model of computation Reversible computation Quantum physics Quantum physics and computation
2	Week 3-4	Dirac notation and Hilbert Spaces Dual vectors Operators The spectral theorem Functions of operators
3	Week 5-6	Tensor products Schmidt decomposition theorem State of a quantum system Time evolution of a closed system Composite systems Measurement Mixed states and general quantum operations
4	Week 7-8:	Quantum circuit model Quantum gates Universal sets of quantum gates Unitary transformations Quantum circuits Superdense coding Quantum teleportation Applications of teleportation
5	Week 9-10	Probabilistic versus quantum algorithms Phase kick-back The Deutsch algorithm The Deutsch - Jozsa algorithm Simons algorithm Quantum phase estimation and quantum Fourier Transform Eigenvalue estimation
6	Week 11-12	Order-finding problem Eigenvalue estimation approach to order finding

		Shor's algorithm for order finding
		Finding discrete logarithms
		Hidden subgroups
		Grover's quantum search algorithm
		Amplitude amplification
		Quantum amplitude estimation
		Quantum counting
		Searching without knowing the success probability.
		Computational complexity
		Black-box model
		Lower bounds for searching
7	Week 13-14:	General black-box lower bounds
		Polynomial method
		Block sensitivity
		Adversary methods
		Classical error correction
		Classical three-bit code
8	Week 15-16:	Fault tolerance
8	week 15-16:	Quantum error correction
		Three- and nine-qubit quantum codes
		Fault-tolerant quantum computation.

## 5. Teaching-Learning Process Strategies

S/L	TLP Strategies:	Description
1	Lecture Method	Utilize various teaching methods within the lecture format to reinforce competencies.
2	Video/Animation	Incorporate visual aids like videos/animations to enhance understanding of the concepts.
3	Collaborative Learning	Encourage collaborative learning for improved competency application.
4	Higher Order Thinking (HOTS) Questions:	Pose HOTS questions to stimulate critical thinking related to each competency.
5	Problem-Based Learning (PBL)	Implement PBL to enhance analytical skills and practical application of competencies
6	Multiple Representations	Introduce topics in various representations to reinforce competencies
7	Real-World Application	Discuss practical applications to connect theoretical concepts with real-world competencies.
8	Flipped Class Technique	Utilize a flipped class approach, providing materials before class to facilitate deeper understanding of competencies
9	Programming Assignments	Assign programming tasks to reinforce practical skills associated with competencies.

## 6 .Assessment Details (both CIE and SEE)

## **Continuous Internal Evaluation:**

This section of regulations is applicable to all theory-based courses. The minimum CIE marks requirement is 40% of maximum marks in each component.

## CIE Split up

	Components	Number	Weightage	Max. Marks	Min. Marks
(i)	Internal Assessment-Tests (A)	2	50%	25	10
(ii)	Assignments/Quiz/Activity (B)	2	50%	25	10
	TotalM	50	20		

## FinalCIE Marks =(A) + (B)

Average internal assessment shall be the average of the 2 test marks conducted.

## Semester End Examination:

1.Question paper pattern will be ten questions. Each question is set for 20marks. The medium of the question paper shall be English unless otherwise it is mentioned.

2. There shall be 2 questions from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have mix of topics under that module if necessary.

3. The students have to answer 5 full questions selecting one full question from each module.

4.Marks scored will be proportionally scaled down to 50 marks.

#### 7. Learning Objectives

S/L	Learning Objectives	Description
1	Understand Quantum Mechanics Fundamentals	Gain a foundational understanding of quantum mechanics principles, including superposition, entanglement, and quantum states.
2	Develop Proficiency in Quantum Algorithms	Learning and implement key quantum algorithms, such as Shor's and Grover's algorithms, understanding their significance and applications.
3	Apply Mathematical Concepts to Quantum Computing	Use linear algebra, complex numbers, and probability theory to model and analyze quantum systems and processes.
4	Design and Simulate Quantum Circuits	Develop the ability to design quantum circuits and simulate them using quantum programming tools like Qiskit.
5	Explore Quantum Information Theory	Understand the concepts of quantum information, quantum entropy, and quantum error correction, and their applications in quantum communication.

## 8. Course Outcomes (Cos) and Mapping with Pos/ PSOs

## Course Outcomes (Cos)

CO'S	Description			
M23BCS705A.1	Analyze the fundamental concepts and principles of quantum computing			
M23BCS705A.2	Analyze the Qubits and Quantum Model of Computation Management			
M23BCS705A.3	Evaluate and understand various Quantum Algorithms			
M23BCS705A.4	Analyze and understand various Quantum Algorithms			
M23BCS705A.5	Examine the various concepts of Quantum Computational Complexity and Error			
	Correction			

#### **CO-PO-PSO Mapping**

Cos/POs	PO1	PO2	PO3	PO4	PO5	PO6	<b>PO7</b>	PO8	PO9	PO110	PO111	PO112	PSO1	PSO2
M23BCS705A.1	3	2	-	-	3	-	-	-	-	-	-	3	3	
M23BCS705A.2	3	3	3	-	-	-	-	-	-	-	-		3	
M23BCS705A.3	-	3		2	-	-	-	-	-	-	-	3

M23BCS705A.5	-	-	3	-	-	-	-	-	-	-	-	-	3	
M23BCS705A	3	3	3	2								3	3	

#### 9. Assessment Plan

#### **Continuous Internal Evaluation (CIE)**

	Continuous Internal Evaluation (CIE)					
	CO1	CO2	CO3	CO4	CO5	Total
Module 1	10					
Module 2		10				
Module 3			10			
Module 4				10		
Module 5					10	
Total	10	10	10	10	10	50

#### Semester End Examination (SEE)

2023 Scheme - 7th to 8th Sem Competency Based Syllabi for B.E CSE

	CO1	CO2	CO3	CO4	CO5	Total
Module 1	20					
Module 2		20				
Module 3			20			
Module 4				20		
Module 5					20	
Total	20	20	20	20	20	100

## **Conditions for SEE Paper Setting:**

Each module of SEE question paper should be allocated with questions for 20% of the total SEE marks.

## 10. Future with this Subject

• The future with Quantum Computing is likely to involve several key trends and developments:

• Revolutionizing Cryptography: Quantum computers could break traditional cryptographic schemes, like RSA, by efficiently factoring large numbers. This will lead to the development of quantum-resistant encryption methods, securing data in a post-quantum world.

• Advancements in Drug Discovery and Material Science: Quantum computing could simulate molecular interactions at an unprecedented scale, enabling the discovery of new drugs and materials with properties tailored for specific purposes, potentially revolutionizing healthcare and materials engineering.

- Optimization and Problem-Solving: Quantum algorithms can solve complex optimization problems exponentially faster than classical algorithms. This could impact logistics, finance, manufacturing, and any field that relies on solving large-scale optimization problems.
- Artificial Intelligence and Machine Learning:Quantum computing could enhance machine learning algorithms, enabling faster training and more accurate models. This could lead to breakthroughs in AI applications, such as natural language processing, image recognition, and autonomous systems.
- Accelerating Scientific Research: Quantum computers can simulate quantum systems, aiding in the understanding of fundamental physics and chemistry. This could lead to new discoveries in quantum mechanics, particle physics, and other scientific fields, pushing the boundaries of our knowledge.
- Economic and Industrial Transformation: Quantum computing has the potential to create new industries, jobs, and economic growth. Companies and countries that invest in quantum technologies could gain a significant competitive advantage, leading to shifts in global economic power.

7'	<sup>th</sup> Semester	Professional Elective–IV (PE) Cryptography	M23BCS705B		
1.	Prerequisites		·		
S/L	Proficienc	y Prerequisites			
1.	Number Theory: Understanding concepts like prime numbers, modular arithme and Euler's theorem is crucial for many cryptographic algorithms.Abstract Algebra: Familiarity with groups, rings, and fields is important, especia for grasping encryption methods like RSA and elliptic curve cryptography.Probability and Statistics: Useful for analyzing the security of cryptographic syste and understanding concepts like randomness and entropy.				
2.	Computer Science Fundamental	<ul> <li>Algorithms and Data Structures: Knowing how to efficiently implement and analyze algorithms is essential, as many cryptographic techniques involve complex computations and data manipulations.</li> <li>Complexity Theory: Understanding the computational complexity of algorithms helps in assessing their practicality and security.</li> </ul>			
3.	Discrete       Combinatorics: Useful for understanding permutations, combinations, and other counting principles.         Mathematics       Graph Theory: Relevant for certain cryptographic protocols and network security.				
4.	Programming Skills         Scripting and Coding: Proficiency in programming languages (like Python, C++, or Java) is important for implementing and testing cryptographic algorithms and protocols.				
5.	OKINS         protocols.           Understanding of Security Concepts         Basic Security Principles: Knowledge of concepts like confidentiality, integrity, and authentication is fundamental for designing and evaluating cryptographic systems.           Network Security: Familiarity with protocols such as SSL/TLS and concepts like public key infrastructure (PKI) can be beneficial.				

#### 2. Competencies

	2. Competencies	
S/L	Competency	KSA Description
1.	Number Theory	Understand prime numbers, modular arithmetic, and Euler's theorem. Apply concepts of greatest common divisor (GCD) and modular inverses.
2.	Cryptographic Algorithms and Techniques	Implement and understand block ciphers (e.g., AES) and stream ciphers.
3.	Protocols and Standards	Understand key exchange protocols, authentication protocols, and secure messaging. Implement and analyze protocols such as SSL/TLS, IPsec, and PKI.
4.	Implementation and Secure Coding	Code cryptographic algorithms and protocols in languages such as Python, C++, or Java. Ensure correct implementation and avoid common programming mistakes.
5.	Security Analysis and Evaluation	Analyze the security of cryptographic algorithms using formal methods and proofs. Evaluate potential attack vectors and cryptographic weaknesses.
6.	Legal and Ethical Considerations	Understand legal regulations related to cryptography, including data protection laws and export controls.

## 3. Syllabus

Cryptography (M23BCS705B) SEMESTER – VII					
Course Code	M23BCS705B	CIE Marks	50		
Number of Lecture Hours/Week(L: T: P: S)	(3:0:0)	SEE Marks	50		
Total Number of Lecture Hours40 hours TheoryTotal Marks100			100		
Credits	03	Exam Hours	03		
Course objectives: This course will enable students to:					
• Define cryptography and its principles					
<ul> <li>Explain Cryptography algorithms</li> </ul>					
	1				

Illustrate Public and Private key cryptography

Department of Informations Science and Engineering, MIT Mysore

Page 49

- Explain Key management, distribution and certification
- Explain authentication protocols
- Tell about IPSec

#### Module -1

Classical Encryption Techniques Symmetric Cipher Model, Cryptography, Cryptanalysis and Brute-Force Attack, Substitution Techniques, Caesar Cipher, Monoalphabetic Cipher, Playfair Cipher, Hill Cipher, Polyalphabetic Cipher, One Time Pad. Block Ciphers and the data encryption standard: Traditional block Cipher structure, stream Ciphers and block Ciphers, Motivation for the feistel Cipher structure, the feistel Cipher, The data encryption standard, DES encryption, DES decryption, A DES example, results, the avalanche effect, the strength of DES, the use of 56-Bit Keys, the nature of the DES algorithm, timing attacks, Block cipher design principles, number of rounds, design of function F, key schedule algorithm Textbook 1: Ch. 2.1,2.2, Ch. 3 RBT: L1, L2

#### Module -2

Public-Key Cryptography and RSA: Principles of public-key cryptosystems. Public-key cryptosystems. Applications for public-key cryptosystems, requirements for public-key cryptosystems. public-key cryptanalysis. The RSA algorithm, desription of the algorithm, computational aspects, the security of RSA. Other Public-Key Cryptosystems: Diffie-hellman key exchange, The algorithm, key exchange protocols, man in the middle attack,Elgamal Cryptographic systems Textbook 1: Ch. 9, Ch. 10.1,10.2 RBT: L1, L2

#### Module -3

Elliptic curve arithmetic, abelian groups, elliptic curves over real numbers, elliptic curves over Zp, elliptic curves overGF(2m), Elliptic curve cryptography, Analog of Diffie-hellman key exchange, Elliptic curve encryption/ decryption, security of Elliptic curve cryptography, Pseudorandom number generation based on an asymmetric cipher, PRNG based on RSA. Key Management and Distribution: Symmetric key distribution using Symmetric encryption, A key distribution scenario, Hierarchical key control, session key lifetime, a transparent key control scheme, Decentralized key control, controlling key usage, Symmetric key distribution using asymmetric encryption, simple secret key distribution, secret key distribution with confidentiality and authentication, A hybrid scheme, distribution of public keys, public announcement of public keys, publicly available directory, public key authority, public keys certificates. Textbook 1: Ch. 10.3-10.5, Ch.14.1 to 14.3 RBT: L1, L2

#### Module -4

X-509 certificates. Certificates, X-509 version 3, public key infrastructure .User Authentication: Remote user Authentication principles, Mutual Authentication, one wayAuthentication, remote user Authentication using Symmetric encryption, Mutual Authentication, one way Authentication, Kerberos, Motivation, Kerberos version 4, Kerberos version 5, Remote user Authentication using Asymmetric encryption, Mutual Authentication, one way Authentication, operational; description, one way Authentication. Electronic Mail Security: Pretty good privacy, notation, operational; description, S/MIME, RFC5322, Multipurpose internet mail extensions, S/MIME functionality, S/MIME messages, S/MIME certificate processing, enhanced security services, Domain keys identified mail, internet mail architecture, E-Mail threats, DKIM strategy, DKIM functional flow. Textbook 1: Ch. 14.4, Ch. 15.1 to 15.4, Ch.19 RBT: L1, L2

Module -5

IP Security: IP Security overview, applications of IPsec, benefits of IPsec, Routing applications, IPsec documents, IPsec services, transport and tunnel modes, IP Security policy, Security associations, Security associations database, Security policy database, IP traffic processing, Encapsulating Security payload, ESP format, encryption and authentication algorithms, Padding, Anti replay service Transport and tunnel modes, combining security associations, authentication plus confidentiality, basic combinations of security associations, internet key exchange, key determinations protocol, header and payload formats, cryptographic suits. Textbook 1: Ch. 20.1 to 20.3 RBT: L1, L2

#### **Text Books:**

- 1. William Stallings: Cryptography and Network Security, Pearson 6th edition.
- 2. Cryptography and Network Security Behrouz A. Forouzan, De Anza College

#### **Reference Books:**

1.V K Pachghare: Cryptography and Information Security, PHI 2nd Edition

## 2023 Scheme - 7th to 8th Sem Competency Based Syllabi for B.E CSE

4. Syl	llabus Timeline	
S/L	Syllabus Timeline	Description
1	Week1: Introduction to Cryptography	<ul> <li>• Topics:</li> <li>History and importance of cryptography</li> <li>Basic concepts: confidentiality, integrity, authentication</li> <li>Overview of cryptographic systems and their applications</li> <li>• Activities:</li> <li>Lecture on the history and evolution of cryptography</li> <li>Introduction to basic cryptographic terminology</li> </ul>
2	Week2: Mathematical Foundations	<ul> <li>Topics:         <ul> <li>Number theory basics: primes, modular arithmetic</li> <li>Introduction to algorithms: Euclidean algorithm, modular inverses</li> </ul> </li> <li>Activities:         <ul> <li>Lecture on number theory and its relevance to cryptography</li> <li>Problem sets on modular arithmetic and number theory</li> </ul> </li> </ul>
3	Week3: Abstract Algebra	<ul> <li>Topics:</li> <li>Groups, rings, and fields</li> <li>Applications to cryptographic algorithms</li> <li>Activities:</li> <li>Lecture on abstract algebra concepts</li> <li>Exercises on group theory and their application in cryptograph</li> </ul>
4	Week4: Symmetric Key Cryptography	<ul> <li>• Topics:</li> <li>Block ciphers: DES, AES</li> <li>Modes of operation: ECB, CBC, CTR</li> <li>Padding schemes and their importance</li> <li>• Activities:</li> <li>Lecture on symmetric encryption algorithms</li> <li>Hands-on lab: Implementing and testing AES</li> <li>Reading: "Understanding Cryptography" (Chapters on AES and DES)</li> </ul>
5	Week 5: Stream Ciphers and Their Applications	<ul> <li>• Topics:</li> <li>• Stream ciphers: RC4, Salsa20</li> <li>• Comparison with block ciphers</li> <li>• Activities:</li> <li>• Lecture on stream ciphers and their use cases</li> <li>• Coding exercise: Implementing a stream cipher</li> </ul>
6	Week 6: Hash Functions	<ul> <li>Topics:</li> <li>Properties and uses of hash functions</li> <li>Cryptographic hash functions: MD5, SHA-1, SHA-2, SHA-3</li> <li>HMAC and its applications</li> <li>Activities:</li> <li>Lecture on hash functions and their importance in cryptography</li> <li>Hands-on lab: Implementing and analyzing hash functions</li> </ul>

## 5. Teaching-Learning Process Strategies

S/L	TLP Strategies:	Description
1	Lecture Method	Utilize various teaching methods within the lecture format to reinforce competencies.
2	Video/Animation	Incorporate visual aids like videos/animations to enhance understanding of concepts.
3	Collaborative Learning	Encourage collaborative learning for improved competency application.
4	Higher Order Thinking (HOTS) Questions:	Pose HOTS questions to stimulate critical thinking related to each competency.
5	Problem-Based Learning (PBL)	Implement PBL to enhance analytical skills and practical application of competencies

2023 Scheme - 7th to 8th Sem Competency Based Syllabi for B.E CSE

6	Multiple Representations	Introduce topics in various representations to reinforce competencies		
7	Real-World Application	Discuss practical applications to connect theoretical concepts with real-world competencies.		
8	Flipped Class Technique	Utilize a flipped class approach, providing materials before class to facilitate deeper understanding of competencies		
9	Programming Assignments	Assign programming tasks to reinforce practical skills associated with competencies.		

## 6 .Assessment Details (both CIE and SEE)

The Weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 40% of the maximum marks (20 marks out of 50). A student shall be deemed to have satisfied the academic requirements and earned the credits allotted to each subject/ course if the student secures not less than 35% (18 Marks out of 50) in the semester-end examination(SEE), and a minimum of 40% (40 marks out of 100) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together

## Continuous Internal Evaluation:

	Components	Number	Weightage	Max. Marks	Min. Marks
(i)	Internal Assessment-Tests (A)	2	50%	25	10
(ii)	Assignments/Quiz/Activity (B)	2	50%	25	10
	Total Mar	50	20		

Final CIE Marks = (A) + (B)

Average internal assessment shall be the average of the 2 test marks conducted.

CIE methods /question paper is designed to attain the different levels of Bloom's taxonomy as per the outcome defined for the course.

## Semester End Examination:

Theory SEE will be conducted as per the scheduled timetable, with common question papers for the subject (duration 03 hours)

- 1. Question paper pattern will be ten questions. Each question is set for 20marks. The medium of the question paper shall be English unless otherwise it is mentioned.
- 2. There shall be 2 questions from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have mix of topics under that module if necessary.
- 3. The students have to answer 5 full questions selecting one full question from each module.
- 4. Marks scored will be proportionally scaled down to 50 marks

## 7. Learning Objectives

	Learning Objectives	
S/L	Learning Objectives	Description
1	Fundamental Principles	Understand the basic principles of cryptography, including confidentiality, integrity, authenticity, and non-repudiation. Learn the difference between symmetric and asymmetric encryption and their use cases.
2	Cryptographic Algorithms	Study various cryptographic algorithms and protocols, such as DES, AES, RSA, and ECC.Learn how to implement and analyze these algorithms in practical scenarios.
3	Key Management	Understand key generation, distribution, and storage techniques. Learn the principles of key exchange protocols, such as Diffie-Hellman.
4	Cryptographic Protocols	Gain knowledge about cryptographic protocols, including SSL/TLS, IPsec, and others. Understand how these protocols secure communications over networks.
5	Hash Functions	Study hash functions like MD5, SHA-1, and SHA-256. Learn how hash functions contribute to data integrity and digital signatures.

## 8. Course Outcomes (Cos) and Mapping with Pos/ PSOs

## Course Outcomes (Cos)

Cos	Description			
M23BCS705B.1	Understand cryptography basics, algorithms and mathematical background for			
W125DC5705D.1	cryptography.			
M23BCS705B.2	Analyze the important cryptographic algorithms.			
M23BCS705B.3	Apply Cryptographic algorithms for Encryption and KeyExchange in real time projects.			
M23BCS705B.4	Apply the various Authentication schemes to simulate different applications			

## 2023 Scheme - 7th to 8th Sem Competency Based Syllabi for B.E CSE

M23BCS705B.5 Realize the security threats caused by malware, design Firewall based solutions and access control techniques to solve societal security problems.

## 10. Future with this Subject

1. Post-Quantum Cryptography:

**Challenge**: Quantum computers have the potential to break many of the cryptographic algorithms currently in use, such as RSA and ECC.

## 2. Advances in Cryptographic Algorithms:

**Enhancements**: Cryptographic algorithms will continue to evolve to address new security threats and improve efficiency.

**Example**: The development of lightweight cryptographic algorithms for resource-constrained environments like IoT devices.

3. Blockchain and Cryptocurrencies:

**Expansion**: Cryptography will remain central to blockchain technologies, ensuring secure transactions, smart contracts, and decentralized applications (DApps).

**Innovation**: Advances in blockchain technology and cryptographic techniques will drive the development of new financial systems, governance models, and digital identities.

## 7<sup>th</sup>Semester Professional Elective-IV(PE) M23E 8USINESS INTELLIGENCE AND ANALYTICS M23E

#### M23BCD705C

## 1. Prerequisites

S/L	Proficiency	Prerequisites
1	Basic Statistics:	Understanding of fundamental statistical concepts such as mean, median, mode, variance, standard deviation, correlation, and regression.
2	Probability:	Familiarity with basic probability theory, including probability distributions and probability rules.
3	Introductory Programming:	Knowledge of at least one programming language, such as Python or R, which are commonly used in data analysis and BI.
4	Introduction to Business Concepts:	Basic understanding of business processes, organizational structures, and key performance indicators (KPIs).
5	Information Systems:	Familiarity with the role of information systems in organizations, including data management systems, enterprise resource planning (ERP), and customer relationship management (CRM) systems.

#### 2. Competencies

S/L	Competency	KSA Description
1	Data Management	<ul><li>Knowledge: Knowledge of how to structure and store data efficiently to ensure its integrity and accessibility.</li><li>Skills: The ability to analyze complex datasets, identify trends and patterns.</li><li>Attitudes: This involves understanding the strategic context of data analysis and using insights to influence business strategy.</li></ul>
2	Business Intelligence Concepts	<ul> <li>Knowledge: Familiarity with the fundamental concepts of BI, such as data visualization, reporting, decision support systems, and key performance indicators (KPIs).</li> <li>Skills: Skill in developing script for analysis.</li> <li>Attitudes: Ability to Analyze business data efficiently.</li> </ul>
3	Statistical and Analytical Techniques	<ul> <li>Knowledge: Understanding how to apply these techniques to real-world business problems.</li> <li>Skills: The ability to approach business problems analytically, develop hypotheses, and use data to test and validate these hypotheses.</li> <li>Attitudes: The ability to quickly adapt to new tools, technologies, and methodologies in the rapidly evolving field of BI and Analytics.</li> </ul>
4	Decision Support System	<ul><li>Knowledge: Knowledge of ANN, Decision support system.</li><li>Skills: Skill on applying ANN knowledge and Decision support system.</li><li>Attitudes: Ability to apply export system.</li></ul>

#### 3. Syllabus

#### BUSINESS INTELLIGENCE AND ANALYTICS SEMESTED VII

SEIVIESTER – VII				
Course Code	M23BCD705C	CIE Marks	50	
Number of Lecture Hours/Week(L: T: P: S)	(3:0:0:0)	SEE Marks	50	
Total Number of Lecture Hours	40 Hours	Total Marks	100	
Credits	03	Exam Hours	03	

#### **Course Objectives:**

- 1. Explain the Business Intelligence, Analytics and Decision Support system
- 2. List the technologies for Decision making, Automated decision systems
- 3. Explain sentiment analysis techniques
- 4. Illustrate Multi-criteria Decision making systems, predictive modelling techniques

#### Module -1

**An Overview of Business Intelligence, Analytics, and Decision Support:** Information Systems Support for Decision Making, An Early Framework for Computerized Decision Support, TheConcept of Decision Support Systems, A Framework for Business Intelligence, Business Analytics Overview, Brief Introduction to Big Data Analytics.

Module -2

**Decision Making:** Introduction and Definitions, Phases of the Decision, Making Process, The Intelligence Phase, Design Phase, Choice Phase, Implementation Phase, Decision Support Systems Capabilities, Decision Support Systems Classification, Decision Support Systems Components.

#### Module -3

**Neural Networks and Sentiment Analysis:** Basic Concepts of Neural Networks, Developing Neural Network-Based Systems, Illuminating the Black Box of ANN with Sensitivity, Support Vector Machines, A Process Based Approach to the Use of SVM, Nearest Neighbour Method for Prediction, Sentiment Analysis Overview, Sentiment Analysis Applications, Sentiment Analysis Process, Sentiment Analysis, Speech Analytics.

#### Module -4

**Model-Based Decision Making:** Decision Support Systems modeling, Structure of mathematical models for decision support, Certainty, Uncertainty, and Risk, Decision modeling with spreadsheets, Mathematical programming optimization, Decision Analysis with Decision Tables and Decision Trees, Multi-Criteria Decision Making With Pairwise Comparisons.

#### Module -5

Automated Decision Systems and Expert Systems: Automated Decision Systems, The Artificial Intelligence field, Basic concepts of Expert Systems, Applications of Expert Systems, Structure of Expert Systems, Knowledge Engineering, Development of Expert Systems.

#### **Suggested Learning Resources:**

**Text Books:** 

- 1. Ramesh Sharda, DursunDelen, EfraimTurban, J.E.Aronson, Ting-Peng Liang, David King, "Business
- Intelligence and Analytics: System for Decision Support", 10th Edition, Pearson Global Edition, 2013
- 2. Data Analytics: The Ultimate Beginner's Guide to Data Analytics Paperback 12 November 2017by Edward Mize.

### **REFERENCE BOOKS:**

- 1. Kumar U. D: Business Analytics The Science of Data Driven Decision Making, Wiley.
- 2. Bowles M. : Machine Learning in Python Essential Techniques for Predictive Analysis, Wiley.

	Synabus Thilenne	
S/L	Syllabus Timeline	Description
1	Week 1-3: An Overview of Business Intelligence, Analytics, and Decision Support	Introduction to concepts of Business Intelligence. Review of theory and concepts Basics data analytics and decision support system.
2	Week 4-6: Decision Making	Introduction to decision system. Phases of decision making system. Process of decision making system.
3	Week 8-11: Neural Networks and Sentiment Analysis	Introduction to Neural Networks and Sentiment Analysis.
4	Week 7-8: Model-Based Decision Making	Introduction to the structure of decision making system. Different decision making models.
5	Week 9-12: Automated Decision Systems and Expert Systems	Introduction to Automated decision system. Basics of expert system. Structure and applications of expert system.

## 4. Syllabus Timeline

#### 5. Teaching-Learning Process Strategies

S/L	<b>TLP Strategies:</b>	Description		
1	Lecture Method	Utilize various teaching methods within the lecture format to reinforce competencies.		
2	Simulation	Use software simulations to mimic real-world business scenarios.		
3	Group Projects and Collaborative Learning	Promote teamwork through group projects that require students to collaborate on analysis and decision-making.		
4	Problem based Learning	Present students with real-world business problems to solve using BI tools.		

Department of Informations Science and Engineering, MIT Mysore

Page 55

5	Case Study based	Analyze case studies of companies that have successfully implemented BI and
2	approach	Analytics.
6 Laba ar	Labs and Workshops	Provide regular lab sessions where students can practice using BI tools like
0	Labs and workshops	Tableau, Power BI, or SQL.

## 6. Assessment Details (both CIE and SEE)

## **Continuous Internal Evaluation:**

The minimum CIE marks requirement is 40% of maximum marks in each component.

## CIE Split up

	Components	Number	Weightage	Max. Marks	Min. Marks
(i)	Internal Assessment-Tests (A)	2	50%	25	10
(ii)	Assignments/Quiz/Activity (B)	2	50%	25	10
	TotalM	50	20		

## FinalCIE Marks = (A) + (B)

Average internal assessment shall be the average of the 2 test marks conducted. **Semester End Examination:** 

- Question paper pattern will be ten questions. Each question is set for 20marks. The medium of the question paper shall be English unless otherwise it is mentioned.
- There shall be 2 questions from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have mix of topics under that module if necessary.
- The students have to answer 5 full questions selecting one full question from each module.
- Marks scored will be proportionally scaled down to 50 marks

### 7. Learning Objectives

S/L	Learning Description		
1	Understanding Business Intelligence Concepts	Describe the role of BI in supporting strategic and operational decision-making in organizations.	
2	Data Management and Preparation	Perform data extraction, transformation, and loading (ETL) processes to prepare data for analysis.	
3	Analytical Skills Development	Apply statistical methods and data analysis techniques to interpret data and derive actionable insights.	
4	Data Visualization and Reporting	Design and develop effective data visualizations that communicate insights clearly and concisely to stakeholders.	
5	Real-World Application	Implement a comprehensive BI project that involves data collection, analysis, visualization, and reporting in response to a real-world business challenge.	

## 8. Course Outcomes (COs) and Mapping with POs/ PSOs

## Course Outcomes (COs)

## 10. Future with this Subject:

- AI-Powered Analytics: The integration of artificial intelligence (AI) and machine learning (ML) into BI will become more prevalent, leading to the development of more sophisticated predictive and prescriptive analytics.
- Natural Language Processing (NLP): NLP will allow users to interact with BI tools using conversational language, making data analysis more accessible to non-technical users.

• **IoT and Big Data**: The convergence of BI with IoT and Big Data will lead to new opportunities for analytics.

• Lifelong Learning: The rapid evolution of tools and technologies in BI and Analytics will require professionals to engage in lifelong learning.

2	Software a Development Tools:	Both AR and VR development require software tools for creating and managing content. Common tools include Unity or Unreal Engine for creating interactive 3D environments, as well as AR-specific tools like ARKit (for iOS) or ARCore (for Android) for developing AR applications.					
3	Understandin of 3D Model and Animatio	nding Creating immersive AR and VR experiences often involves 3D modeling and animation. Proficiency with 3D modeling software (like Blender, 3ds Max, o					
4	Programming         Developing AR and VR applications usually requires programming knowle           Familiarity with languages like C# (commonly used in Unity) or C++ (often us)						
5	User Experience (UX) Des Knowledge:	Designing for AR and VR involves unique considerat Understanding how users interact with 3D spaces, how to and how to ensure comfort and accessibility (to prevent is are all critical for creating effective and engaging AR/VF	to create intuitive controls, ssues like motion sickness)				

## 2.Competencies

S/L	Competency	KSA Description
1	3D Modeling and Animation	Students are able to create and animate 3D assets that are optimized for AR/VR environments.
2	Programming and Scripting	Students will understand the use of AR/VR SDKs and APIs (e.g., Unity, Unreal Engine, ARKit, ARCore).
3	User Experience (UX) Design	Students learn Ability to analyze user behavior and feedback to improve the AR/VR experience.
4	Hardware and Sensor Integration	Students learn to address and resolve hardware and sensor integration challenges.
5	Computer Vision	Students learn to enhance the AR experience by integrating sophisticated computer vision capabilities.
6	Project Management and Collaboration	Ability to lead projects from conception through completion, ensuring timelines and goals are met.

## 6 .Assessment Details (both CIE and SEE)

The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 40% of the maximum marks (20 marks out of 50). A student shall be deemed to have satisfied the academic requirements and earned the credits allotted to each subject/ course if the student secures not less than 35% (18 Marks out of 50) in the semester-end examination(SEE), and a minimum of 40% (40 marks out of 100) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together

#### **Continuous Internal Evaluation:**

	Components	Number	Weightage	Max. Marks	Min. Marks
(i)	Internal Assessment-Tests (A)	2	50%	25	10
(ii)	Assignments/Quiz/Activity (B)	2	50%	25	10
	Total Marks			50	20

## Final CIE Marks = (A) + (B)

Average internal assessment shall be the average of the 2 test marks conducted.

# CIE methods /question paper is designed to attain the different levels of Bloom's taxonomy as per the outcome defined for the course.

## Semester End Examination:

Theory SEE will be conducted as per the scheduled timetable, with common question papers for the subject (duration 03 hours)

- Question paper pattern will be ten questions. Each question is set for 20marks. The medium of the question paper shall be English unless otherwise it is mentioned.
- There shall be 2 question from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have mix of topics under that module if necessary.
- The students have to answer 5 full questions selecting one full question from each module.
- Marks scored will be proportionally scaled down to 50 marks

S/L	Learning Objectives	Description
1	Understand AR/VR Fundamentals	Students Learn the core concepts and technologies behind AR and VR.
2	Develop AR/VR Content	Acquire skills in creating and programming interactive 3D content for AR/VR.
3	Design Immersive UX	Master user experience principles specific to AR/VR environments.
4	Optimize AR/VR Systems	Implement and fine-tune AR/VR applications for performance and usability
5	Explore Trends and Applications	Stay updated on the latest AR/VR advancements and industry applications.

#### 7. Learning Objectives

## 8. Course Outcomes (Cos) and Mapping with Pos/ PSOs

#### **Course Outcomes (Cos)**

Cos	Description
M23BIS705D.1	Analyse the fundamental concepts and principles of AR and VR.
M23BIS705D.2	Design and develop AR/VR projects, demonstrating the ability to create immersive and interactive experiences using appropriate development tools and technologies.
M23BIS705D.3	Apply key principles of AR and VR, including spatial awareness, user interaction, and real-time rendering, to create functional and engaging applications.
M23BIS705D.4	Analyze the performance of AR/VR applications, optimizing aspects such as graphics rendering, user interaction, and system efficiency to ensure high-quality user experiences.
M23BIS705D.5	Evaluate and critique different AR/VR technologies and platforms, understanding their features, capabilities, and limitations, and making informed decisions about their use in various contexts.

#### **CO-PO-PSO Mapping**

## **Conditions for SEE Paper Setting:**

Each module of SEE question paper should be allocated with questions for 20% of the total SEE marks. **10.Future with this Subject** 

The future with Augmented and Virtual Reality is likely to involve several key trends and developments:

- 1. Enhanced Immersive Experiences: Future AR and VR systems will offer even more immersive experiences with advancements in hardware and software, including higher resolution displays, more accurate motion tracking, and improved sensory feedback. Innovations like haptic feedback suits and advanced spatial audio will further enhance the sense of presence and immersion.
- 2. Integration with Artificial Intelligence (AI): AR and VR will increasingly integrate with AI to create more intelligent and responsive environments. AI could enhance real-time object recognition, personalize user experiences, and enable dynamic content generation, making interactions more intuitive and context-aware.
- 3. **Broader Applications across Industries**: The application of AR and VR will expand significantly across various industries. For example, AR might revolutionize fields like healthcare with surgical visualization tools or remote diagnostics, while VR could transform education through virtual classrooms and hands-on simulations.
- 4. Advancements in Wearable Technology: Future developments will lead to more compact, comfortable, and less intrusive AR/VR wearables. This could include lightweight AR glasses with enhanced functionalities or VR headsets with improved ergonomics and wireless capabilities, making them more accessible and practical for daily use.
- 5. Social and Collaborative Virtual Spaces: AR and VR will increasingly facilitate social interactions and collaboration in virtual spaces. Enhanced social VR platforms could allow for more natural and engaging virtual meetings, social gatherings, and collaborative work environments, bridging geographical gaps and fostering global connectivity.

				Operating Systems: Different OS versions for cor	npatibility testing	
				(e.g., Windows, Linux, macOS).		

Chrome, Firefox, Edge, Safari).

Automated Testing Tools: Selenium, QTP, etc. Performance Testing Tools: JMeter, LoadRunner, etc.

**Bug Tracking Tools**: Jira, Bugzilla, etc. **Version Control Systems**: Git, SVN, etc

**Testing Tools**:

cloud-based services.

software.

Browsers: Various web browsers for cross-browser testing (e.g.,

Local Area Network (LAN): To connect the devices within the lab. Internet Connectivity: For accessing online resources, updates, and

Testers/Engineers: Skilled professionals who perform the testing.

System Administrators: To manage and maintain hardware and

Test Environment: A controlled setup that mimics the production

Backup and Recovery: Procedures and tools to ensure data integrity

Developers: To fix any issues identified during testing.

Firewall and Security: Proper configurations to protect the lab network.

## 2. Competencies

02

03

04

05

**Software Requirements** 

**Network Configuration** 

**Human Resources** 

**Environment Setup** 

Comp	etencies	1
S/L	Competency	KSA Description
1	Technical Skills	<ul> <li>Knowledge: Proficiency in using automated testing tools (e.g., Selenium, QTP) and performance testing tools (e.g., JMeter, LoadRunner).</li> <li>Skills: Ability to write and understand code in languages relevant to the application under test (e.g., Java, Python, C#).</li> <li>Attitudes: Competence in querying and managing databases (e.g., SQL, NoSQL) for data-driven testing.</li> </ul>
2	Testing Methodologies	<ul><li>Knowledge: Expertise in performing manual testing, including exploratory, regression, and user acceptance testing.</li><li>Skills: Skills in assessing system performance, load, stress, and scalability.</li><li>Attitudes: Ability to design, implement, and maintain automated test scripts</li></ul>

environment as closely as possible.

and recovery in case of failure.

3	Test Planning and Design	<ul><li>Knowledge: Developing comprehensive test strategies and plans that align with project requirements and goals.</li><li>Skills: Ability to create detailed and effective test cases and scenarios.</li><li>Attitudes: Identifying and managing risks associated with the testing process and product quality.</li></ul>
4	Problem-Solving and Analytical Skills	<ul><li>Knowledge: Proficiency in identifying, documenting, and communicating defects effectively.</li><li>Skills: Skills in analyzing issues to determine their root causes and potential solutions.</li><li>Attitudes: Ability to interpret test results and metrics to make informed decisions.</li></ul>
5	Knowledge of Development Life Cycle	<b>Knowledge:</b> Understanding of Software Development Life Cycle (SDLC) and Agile frameworks (e.g., Scrum, Kanban). <b>Skills:</b> Familiarity with Continuous Integration and Continuous Deployment (CI/CD) processes and tools.

## 4. Syllabus Timeline

S/L	Syllabus Timeline	Description
1	Week 1-2:	Introduction, Program1
2	Week 3-4:	Program2, 3.
3	Week 5-6:	Program4,5
4	Week 7-8:	Program 6,7

2023 Scheme - 7th to 8th Sem Competency Based Syllabi for B.E CSE

5	Week 9-10:	Program.8,9
6	Week 11-12:	Program 10-12

## 5. Teaching-Learning Process Strategies

S/L	<b>TLP Strategies:</b>	Description		
1	Interactive	Use interactive lectures to introduce new concepts. Incorporate questions and		
1	Lectures	discussions to engage students.		
2	Coding Sessions	Demonstrate the implementation of different Testing live, showing step-by-step coding and debugging.		
3	Lab Exercises	Design lab exercises that require students to implement and manipulate Testing process.		
4	Coding Assign regular coding tasks that reinforce lecture material and provide practi			
4	Assignments	experience.		
5	Group Projects	Encourage students to work in groups for larger projects, fostering teamwork and collaborative problem-solving.		
6	Code	Practice writing clear and comprehensive documentation for all coding		
0	Documentation	assignments and projects.		
7	Programming	Assign programming tasks and mini projects to reinforce practical skills		
/	Assignments	associated with competencies.		

## 6. Assessment Details (both CIE and SEE)

## Marks distribution for Program based Practical Course for CIE

Sl. No.	Description	% of Marks	In Marks
1	Observation, write-up, algorithm/program/execution	80% of the maximum	80
2	Viva-Voce	20% of the maximum	20
Total		100%	100

Marks scored by the student for 100 are scaled down to 50 marks.

Marks distribution for Experiment based Practical Course for Final CIE

SL. No.	Description	% of Marks	Marks
1	Write-up, Procedure	20%	20
2	Conduction and result	60%	60
3	Viva-Voce	20%	20
Total		100%	100

• SEE marks for practical course shall be 50 marks

- See for practical course is evaluated for 100 marks and scored marks shall be scaled down to 50 marks.
- Change of experiment/program is allowed only once and 20% marks allotted to the procedure/write-up part to be made zero.
- Duration of SEE shall be 3 hours.

## 7. Course Outcomes (COs) and Mapping with POs/ PSOs

#### Course Outcomes (COs)

COs	Description
M23BISL706.1	Understand the basic in deep learning and neural network.
M23BISL706.2	Understand the basic of associative memory and unsupervised learning network.
M23BISL706.3	Apply CNN network of deep neural network.
M23BISL706.4	Analyze the key computations underlying deep neural network.

SEE for practical Course (Irrespective of Experiment or program based):

СО-РО-Р	SO Ma	pping					-		-	-		-		
COs/POs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

## 8.Learning Objectives

S/L	Learning Objectives	Description
		Understand Neural Network Basics
		Objective: Explain the architecture of neural networks, including
		neurons, layers (input, hidden, output), activation functions, and how
		data flows through the network.
		<b>Outcome</b> : Students will be able to describe the basic components and
1	Fundamental Concepts	structure of neural networks and their functions.
	Ĩ	Grasp the Principles of Deep Learning
		<b>Objective</b> : Define deep learning and differentiate it from traditional
		machine learning approaches, focusing on the use of deep neural
		networks with multiple layers.
		<b>Outcome</b> : Students will understand what constitutes deep learning and its advantages over shallow neural networks.
		Apply Linear Algebra in Neural Networks
		<b>Objective:</b> Use linear algebra concepts such as matrices, vectors, and
		operations to explain neural network computations.
		<b>Outcome</b> : Students will be able to perform matrix operations required
		for neural network training and understand their implications.
		Utilize Calculus for Optimization
		<b>Objective:</b> Apply calculus concepts, including differentiation and
	Mathematical Foundations	gradients, to understand how neural networks are optimized during
2		training.
		Outcome: Students will be proficient in computing gradients and using
		them to optimize neural network parameters.
		Implement Probability and Statistics
		<b>Objective</b> : Use probability and statistical concepts to understand loss
		functions, regularization techniques, and model evaluation metrics.
		<b>Outcome</b> : Students will be able to apply statistical methods to evaluate
		and improve neural network performance.
		Build and Train Neural Networks
		<b>Objective</b> : Develop and train basic neural network models using
		popular frameworks such as TensorFlow, Keras, or PyTorch.
3		<b>Outcome</b> : Students will be able to implement and train neural network
		models for various tasks, including classification and regression.
	Neural Network Design	Apply Regularization Techniques
5	and Training	<b>Objective</b> : Implement regularization methods like dropout, L1/L2
		regularization, and batch normalization to improve model
		generalization.
		<b>Outcome</b> : Students will be able to apply these techniques to prevent
		overfitting and enhance model performance.
		Implement Neural Networks for Real-World Problems
	Practical Applications	<b>Objective</b> : Apply neural network models to solve real-world problems
4	and Deployment	in domains such as image recognition, speech processing, and
	and Deproyment	recommendation systems.
L		recommendation systems.

		<b>Outcome</b> : Students will be able to design and deploy neural network
		solutions for practical applications.
		Deploy and Maintain Models
		<b>Objective</b> : Understand the process of deploying neural networks into
		production environments and maintaining their performance over time.
		Outcome: Students will be able to deploy models and address
		challenges related to scalability, integration, and real-time processing.
		Understand and Implement Convolutional Neural Networks
		(CNNs)
		<b>Objective</b> : Explain the architecture and application of CNNs for image
		and video processing tasks.
		Outcome: Students will be able to build and deploy CNNs for tasks
		like image classification and object detection.
		Explore Recurrent Neural Networks (RNNs) and LSTMs
		Objective: Describe the structure and use cases of RNNs and Long
5	Advanced Architectures	Short-Term Memory (LSTM) networks for sequence modeling.
5	and Techniques	Outcome: Students will be able to apply RNNs and LSTMs to
		problems involving sequential data, such as time series forecasting and
		natural language processing.
		Utilize Transformer Models
		Objective: Understand the architecture and applications of transformer
		models and attention mechanisms in tasks such as language translation
		and text generation.
		Outcome: Students will be able to work with transformer models and
		apply them to advanced natural language processing tasks.

#### 9.Assessment Plan Continuous Internal Evaluation (CIE)

	CO1	CO2	CO3	CO4	CO5	Total
Program 1-6	10	10	10	10	10	50
Total	10	10	10	10	10	50

	CO1	CO2	CO3	CO4	CO5	Total
Program 1-10	20	20	20	20	20	100
Total	20	20	20	20	20	100

## **10.Future with this Subject**

The future of deep learning and neural networks is incredibly promising, with the potential to revolutionize numerous industries and scientific fields. Here are some key areas where these technologies are expected to have a significant impact:

## 1. Healthcare and Medicine

**Personalized Medicine:** Deep learning can analyze genetic information and medical records to create personalized treatment plans, improving patient outcomes.

**Drug Discovery:** Neural networks can accelerate drug discovery by predicting how different compounds interact with biological systems, significantly reducing the time and cost associated with bringing new drugs to market.

**Medical Imaging:** Advanced neural networks will enhance diagnostic accuracy by analyzing medical images, such as X-rays and MRIs, with greater precision than human experts.

## 2. Autonomous Systems

**Self-Driving Vehicles:** Deep learning is central to the development of autonomous vehicles, enabling them to navigate complex environments, recognize objects, and make real-time decisions.

**Robotics:** Neural networks will allow robots to perform complex tasks with greater autonomy and adaptability, from manufacturing and logistics to household chores.

3. Natural Language Processing and AI

Advanced Conversational Agents: The development of more sophisticated natural language processing models will lead to AI that can understand and generate human language more effectively, enhancing communication between humans and machines.

**Language Translation:** Neural networks will continue to improve the accuracy and fluency of real-time language translation, breaking down communication barriers worldwide.

## 4. Finance and Economics

Algorithmic Trading: Deep learning models can analyze vast amounts of financial data to predict market trends and execute trades more efficiently, potentially leading to higher returns.

**Fraud Detection:** Neural networks will enhance the ability to detect fraudulent transactions in real-time, reducing financial crimes and improving security.

#### 5. Climate Science and Environmental Monitoring

**Climate Prediction:** Deep learning models can analyze climate data to make more accurate predictions about future climate conditions, aiding in the fight against climate change.

Environmental Monitoring: Neural networks will improve the monitoring of ecosystems, helping to track changes in biodiversity, deforestation, and pollution

	7 <sup>th</sup> Semester	Project Work (PW) MAJOR PROJECT PHASE-II	M23BIS707
--	--------------------------	---	-----------

## 1. Prerequisites

Proficiency	Prerequisites	
Project Planning and	Basic understanding of project management principles, acquired from	
Management	earlier project work and theoretical courses.	
Experimental Design and	Knowledge of experimental techniques and data analysis from core and	
Analysis	elective courses.	
Fechnical	Competence in technical writing and report drafting.	
Documentation	Competence in technical writing and report dratting.	
Application of	Stars - from 1-tion in the astronation in the interview of the last	
Theoretical Knowledge	Strong foundation in the relevant engineering principles.	
Feam Collaboration	Experience in group projects and collaborative learning environments.	
	Anagement xperimental Design and nalysis echnical occumentation pplication of heoretical Knowledge	

## 2. Competencies

S/L	Competencies	KSA Decomination
3/L	Competency	KSA Description
		Knowledge: Understanding of project planning, scheduling, and resource
1	Project Execution	management.
1	Troject Execution	Skill: Ability to carry out practical work systematically and efficiently.
		Attitude: Proactive and solution-oriented approach to problem-solving.
		Knowledge: Advanced knowledge of data analysis techniques.
2	Data Analysis	Skill: Proficiency in interpreting and analyzing experimental data.
		Attitude: Analytical mindset with a focus on accuracy.
	Technical	Knowledge: Mastery of technical documentation standards.
3	Communication	Skill: Ability to draft comprehensive project reports.
		Attitude: Precision and clarity in communication.
	Presentation Skills	Knowledge: Understanding of audience engagement techniques.
4		Skill: Ability to deliver clear and impactful presentations.
		Attitude: Confidence and professionalism in public speaking.
		Knowledge: Awareness of effective teamwork strategies.
5	Collaboration	Skill: Ability to work collaboratively in multidisciplinary teams.
		Attitude: Respect and openness to diverse perspectives.

#### 3. Project Timeline

S/L	Timeline	Description
1	Week 1-2	Review of problem statement and project plan; setting milestones.
2	Week 3-4	Experimental setup and initial trials.
3	Week 5-6	Data collection and analysis; troubleshooting.
4	Week 7-8	Progress review and mid-term evaluation.
5	Week 9-10	Refinement of experiments and final data analysis.
6	Week 11-12	Drafting the final report.
7	Week 13-14	Presentation preparation and practice.
8	Week 15	Final project presentation and submission of the report.

## 4. Course Objectives

- To execute the project work based on the defined problem statement.
- To develop skills in practical application, experimentation, and analysis.
- To enhance project management, report writing, and presentation skills.
- 1. Assessment Details (both CIE and SEE)

### **CIE procedure for Project Work Phase-II:**

(1) Single discipline: The CIE marks shall be awarded by a committee consisting of the Head of the concerned Department and two senior faculty members of the Department, one of whom shall be the Guide.

The CIE marks awarded for the project work shall be based on the evaluation of the project work Report, project presentation skill, and question and answer session in the ratio 50:25:25. The marks awarded for the project report shall be the same for all the batch mates.

(2) Interdisciplinary: Continuous Internal Evaluation shall be group-wise at the college level with the participation of all guides of the college. Participation of external guide/s, if any, is desirable. The CIE marks awarded for the project work shall be based on the evaluation of project work Report, project presentation skill, and question and answer session in the ratio 50:25:25. The marks awarded for the project report shall be the same for all the batch mates.

**SEE procedure for Project Work Phase-II:** SEE for project work will be conducted by the two examiners appointed by the University. The SEE marks awarded for the project work shall be based on the evaluation of project work Report, project presentation skill, and question and answer session in the ratio 50:25:25.

6. Leal	5. Learning Objectives						
S/L	Learning Objectives	Description					
1	To execute the project plan effectively.	Students will apply their theoretical knowledge to practical tasks, managing the project from start to finish.					
2	To analyze data and refine project outcomes.	Students will enhance their skills in data interpretation and problem-solving.					
3	To document and present the project work comprehensively.	Students will develop a final report and presentation that reflects their project work accurately.					

## 7. Course Outcomes (COs) and Mapping with POs/ PSOs

Course	Outcomes	(COs)	

COs	Description
M23BIS707.1	Successfully execute the project plan and achieve the defined objectives.
M23BIS707.2	Analyze and interpret experimental data to derive meaningful conclusions.
M23BIS707.3	Demonstrate the ability to apply engineering and management principles effectively within
M23BIS707.4	a team, managing project timelines, resources, and deliverables to achieve project goals. Prepare and present a comprehensive project report.

#### **CO-PO-PSO Mapping**

COs/POs	PO1	PO2	PO3	PO4	PO5	PO6	<b>PO7</b>	<b>PO8</b>	PO9	PO10	PO11	PO12	PSO1	PSO2
M23BIS707.1			3		3				3		3		3	3
M23BIS707.2	3	3		3		3					3		3	3
M23BIS707.3			3				3						3	3
M23BIS707.4								3		3	3	3	3	3
M23BIS707	3	3	3	3	3	3	3	3	3	3	3	3	3	3

## 8. Future with this Subject

This phase solidifies the student's ability to independently execute complex engineering projects. The experience gained here is directly transferable to their future academic endeavors, and professional roles in engineering.

8 <sup>th</sup> Semester	Seminar (SR) TECHNICAL SEMINAR	M23BIS803
--------------------------	-----------------------------------	-----------

## 1. Prerequisites

S/L	Proficiency	Prerequisites
1	Research and	Familiarity with academic research and access to digital libraries or
1	Information Gathering	databases.
2	Content Organization	Basic knowledge of report writing, including the use of Microsoft Word,
2	and Report Writing	equation editors, and drawing tools.
2	Technical Presentation	Experience with PowerPoint or other presentation software, as well as
5	Skills	fundamental public speaking skills.
4	Critical Thinking and	Experience in group discussions and the ability to analyze and critique
4	Discussion	technical content.
5	Originality and Integrity	Understanding the importance of originality in coordanic work
5	in Work	Understanding the importance of originality in academic work.

#### 2. Competencies

S/L	Competency	KSA Description
1	Effective Research and Literature Review	<ul> <li>Knowledge: Familiarity with technical literature, research databases, and citation practices.</li> <li>Skill: Ability to conduct a thorough literature review and identify key sources of information.</li> <li>Attitude: Curiosity and a proactive approach to learning.</li> </ul>
2	Report Writing and Documentation	<ul> <li>Knowledge: Understanding of technical writing formats, structure, and referencing.</li> <li>Skill: Proficiency in using word processors, equation editors, and drawing tools to create clear and concise reports.</li> <li>Attitude: Attention to detail and commitment to producing high-quality, original work.</li> </ul>
3	Presentation and Communication	<ul><li>Knowledge: Understanding of effective communication techniques and presentation design.</li><li>Skill: Ability to deliver clear, engaging presentations using visual aids.</li><li>Attitude: Confidence and professionalism in public speaking.</li></ul>
4	Critical Engagement and Discussion	<ul> <li>Knowledge: Familiarity with group discussion dynamics and debate techniques.</li> <li>Skill: Ability to engage with peers, ask relevant questions, and respond thoughtfully to feedback.</li> <li>Attitude: Openness to different viewpoints and willingness to engage in constructive criticism.</li> </ul>
5	Ethical Standards and Academic Integrity Jabus Timeline	<ul><li>Knowledge: Understanding of the principles of academic honesty and the consequences of plagiarism.</li><li>Skill: Ability to produce original work and properly cite all sources.</li><li>Attitude: Integrity and responsibility in academic work.</li></ul>

3. Syllabus Timeline

S/L	Timeline	Description
1	Week 1-2: Topic Selection and Literature Review	Students will select a seminar topic relevant to their specialization and conduct a literature review to gather information.
2	Week 3-4: Content Organization and Report Drafting	Organize the gathered information into a coherent structure and begin drafting the seminar report.
3	Week 5: Report Writing and Formatting	Focus on refining the report, ensuring proper formatting, citation, and use of tools like equation editors and drawing tools.
4	Week 6: Presentation Preparation	Prepare the PowerPoint slides and practice the oral presentation, focusing on clarity and engagement.

2023 Scheme - 7th to 8th Sem Competency Based Syllabi for B.E CSE

5	Week 7: Seminar Presentation and Discussion	Deliver the seminar presentation, engage in a Q&A session, and participate in group discussions.
6	Week 8: Report Submission and Final Evaluation	Submit the final report and undergo a comprehensive evaluation by the faculty committee.

## 4. Assessment Details

The CIE marks shall be awarded by a committee consisting of the Head of the concerned Department and two senior faculty members of the Department, one of whom shall be the Guide.

The CIE marks awarded for the Technical Seminar shall be based on the evaluation of the report, presentation skill, and question and answer session in the ratio of 50:25:25.

## 5. Learning Objectives

S/L	Learning Objectives	Description
1	Conduct In-Depth Research on a Technical Topic	Students will learn to independently research a technical topic, gather and analyse information, and synthesize it into a coherent understanding.
2	Develop and Deliver a Technical Presentation	Students will gain experience in creating and delivering professional technical presentation, enhancing their communication skills.
3	Engage in Technical Discussions and Debates	Students will enhance their critical thinking and discussion skills by engaging with peers in technical debates.
4	Prepare a Detailed Technical Report	Students will learn to write a detailed, well-organized technical report, ensuring proper citation and originality.

## 6. Course Outcomes (COs) and Mapping with POs/ PSOs

Course Outcomes	
COs	Description
M23BIS803.1	Conduct comprehensive research and organize technical content for a seminar presentation.
M23BIS803.2	Prepare and deliver a clear and engaging technical presentation using appropriate tools and techniques.
M23BIS803.3	Engage in technical discussions, respond to queries, and participate in group debates effectively.
M23BIS803.4	Produce a well-structured, original technical report with proper citations and references.

8 <sup>th</sup> Semester Internship (IS) INTERNSHIP	M23BIS804
--	-----------

## 1. Prerequisites

S/L	Proficiency	Prerequisites
1	Understanding of fundamental concepts in the chosen field of study.	Successful completion of core courses related to the field of study.
2	Ability to analyze and solve complex problems using discipline-specific methodologies.	Analytical and problem-solving skills gained through prior coursework and lab work.
3	Capability to conduct independent research or work effectively within an industrial setup.	Experience with project-based learning or relevant coursework that involved team collaboration.
4	Communication and technical writing for the preparation of reports and presentations.	Courses in communication skills and technical writing.
5	Understanding of ethical, social, and environmental responsibilities in professional practices.	Knowledge of professional ethics and sustainable practices.

## 1. Competencies

S/L	Competency	KSA Description
1	Research Methodology	<ul> <li>Knowledge: Understanding of current research trends and methodologies in the chosen field.</li> <li>Skill: Ability to design and conduct experiments or studies, analyze data, and draw conclusions.</li> <li>Attitude: Curiosity and commitment to scientific inquiry and continuous learning.</li> </ul>
2	Practical Application	<ul> <li>Knowledge: Familiarity with industry standards and practical applications of theoretical concepts.</li> <li>Skill: Ability to apply theoretical knowledge to solve real-world problems in an industrial or rural context.</li> <li>Attitude: Adaptability and willingness to learn from real-world experiences.</li> </ul>
3	Presentation and Communication	<ul><li>Knowledge: Understanding of effective communication techniques and presentation design.</li><li>Skill: Ability to deliver clear, engaging presentations using visual aids.</li><li>Attitude: Confidence and professionalism in public speaking.</li></ul>
4	Communication and Presentation	<b>Knowledge:</b> Techniques for effective communication, both written and oral. <b>Skill:</b> Ability to prepare and present technical reports and presentations. <b>Attitude:</b> Confidence in public speaking and openness to feedback.
5	Teamwork and Collaboration	<ul><li>Knowledge: Principles of team dynamics and collaborative working.</li><li>Skill: Ability to work effectively as part of a team, contributing to shared goals.</li><li>Attitude: Cooperative mindset and respect for diverse perspectives.</li></ul>
6	Professionalism and Ethics	<ul> <li>Knowledge: Understanding of professional ethics and legal responsibilities.</li> <li>Skill: Ability to make ethical decisions and demonstrate professional behavior in all activities.</li> <li>Attitude: Integrity and responsibility in professional conduct.</li> </ul>

## 2. Assessment Details

The CIE marks shall be awarded by a committee consisting of the Head of the concerned Department and two senior faculty members of the Department, one of whom shall be the Guide/Mentor. The CIE marks awarded for the Internship shall be based on the evaluation of the report, presentation skill, and question and answer session in the ratio of 50:25:25.

#### 3. Learning Objectives

S/L	Learning Objectives	Description
1	Understand and Apply Research Methodologies or Industry Practices	Students will gain an understanding of current research methodologies in their chosen field or industry practices in the professional setting. They will learn how to apply these methodologies or practices to real-world problems, fostering their ability to conduct independent research or contribute effectively in an industrial environment.
2	Develop Problem- Solving Skills in Real- World Contexts	Students will enhance their problem-solving abilities by working on practical issues encountered in research, industry, or rural settings. They will learn to analyze complex problems, develop viable solutions, and implement them effectively.
3	Improve Communication and Technical Writing Skills	Students will refine their communication skills, both in writing and orally. They will learn how to prepare clear and concise technical reports and deliver presentations that effectively communicate their findings and ideas to diverse audiences.
4	Foster Teamwork and Collaborative Skills	Through collaborative projects, students will develop their ability to work effectively in teams. They will learn how to contribute to group efforts, manage interpersonal dynamics, and achieve shared goals in a professional environment.
5	Cultivate Professionalism and Ethical Responsibility	Students will understand the importance of professionalism and ethical behavior in their work. They will learn to make responsible decisions that consider the broader social, environmental, and ethical implications of their actions.

## 5. Course Outcomes (COs) and Mapping with POs/ PSOs

#### **Course Outcomes (COs)**

COs	Description
M23BIS804.1	Demonstrate the ability to apply research methodologies or industry practices to solve complex problems in a real-world context.
M23BIS804.2	Develop and implement effective solutions to technical challenges encountered during the internship, showcasing problem-solving skills.
M23BIS804.3	Communicate technical information clearly and effectively through well-structured reports and presentations.
M23BIS804.4	Demonstrate knowledge and understanding of engineering and management principles, applying them in a team to manage projects in multidisciplinary environments.

#### **CO-PO-PSO Mapping**
