2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|--------------------------------|--|------------------|
| 5th Semester | Professional Core Course (PC) Theory of Computation | M23BCS501 |
|--------------------------------|--|------------------|

1. Prerequisites

| S/L | Proficiency | Prerequisites |
|-----|---|---|
| 1 | Mathematical Foundations | Discrete Mathematics: Understanding topics such as sets, relations, functions, combinatorics, logic, and proof techniques (e.g., induction, contradiction) is crucial. Graph Theory: Basic knowledge of graphs, trees, and their properties. Linear Algebra: While not always essential, it can be helpful in certain areas like quantum computation. Number Theory: Basics of primes, divisibility, and modular arithmetic can be useful. |
| 2 | Formal Logic | Propositional Logic: Basic logical operations, truth tables, and logical equivalences. Predicate Logic: Understanding of quantifiers, predicates, and logical inference. |
| 3 | Programming and Algorithms | Data Structures: Familiarity with common data structures like arrays, lists, stacks, queues, trees, and graphs. Algorithms: Basic knowledge of algorithm design, analysis (time and space complexity), and common algorithms (e.g., sorting, searching). Programming: Proficiency in at least one programming language is helpful for implementing and understanding theoretical concepts. |
| 4 | Automata and Formal Languages | Finite Automata: Basics of deterministic and nondeterministic finite automata. Regular Languages: Understanding of regular expressions and their relation to finite automata. Context-Free Grammars: Basics of context-free grammars and pushdown automata. |
| 5 | Theoretical Understanding | Grasp abstract concepts and their implications for computation |
| 6 | Problem-Solving Skills | Apply theoretical concepts to solve computational problems. |
| 7 | Basic Understanding of Computability and Complexity | Turing Machines: Introduction to the concept of Turing machines and the ChurchTuring thesis. P vs NP Problem: A basic understanding of computational complexity classes like P, NP, and NP-complete problems. |

2. Competencies

| S/L | Competency | KSA Description |
|-----|-------------------------------|--|
| 1 | Formal Language Theory | <p>Knowledge: It includes understanding fundamental concepts in formal languages, grammars, automata, and the relationships between them. It also encompasses the theoretical foundation needed to understand how formal languages are defined and processed.</p> <p>Skills: It involves the ability to apply theoretical knowledge to solve problems and work with formal models. This includes working with formal grammars, automata, and performing operations on languages to solve computational problems..</p> <p>Attitude: It refers to the mindset or approach an individual adopts when engaging with formal language theory. These attitudes foster deep understanding, critical thinking, and a responsible application of theoretical knowledge.</p> |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|---|------------------------|--|
| 2 | Automata Theory | Knowledge: Understand the fundamental concepts, theories, and frameworks that underlie automata and formal languages. Skills: Ability to apply the knowledge of automata theory to real-world problems, design automata, and perform formal proofs. |
|---|------------------------|--|

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|---|--|--|
| | | Attitude: It refers to the mindset and approach necessary to approach problems in automata theory with rigor, creativity, and persistence. |
| 3 | Computability | Knowledge: Competency in computability requires foundational knowledge in several areas of computer science and mathematics. Skills: In addition to theoretical knowledge, a competent person in computability must develop practical skills such as Problem-Solving with Formal Models, Algorithm Design and Proof, Mathematical Proof Techniques etc. Attitude: It is having the right attitudes is key for competency in computability such as critical thinking, curiosity, precision and rigor. |
| 4 | Complexity Theory | Knowledge: To be competent in complexity theory, a deep understanding of foundational concepts is necessary. Skills: Being competent in complexity theory not only requires knowledge but also the ability to apply that knowledge to solve real problems. Attitude: Having the right mindset and attitudes is key to achieving competency in complexity theory. |
| 5 | Parsing and Language Processing | Knowledge: Requires an understanding of both formal language theory and computational techniques used for analyzing and generating language. Skills: To be proficient in parsing and language processing, you need to be able to apply theoretical knowledge to practical problems. Attitude: The right attitudes are crucial for working with complex language processing tasks |
| 6 | Formal Verification | Knowledge: Using mathematical techniques we have to prove that a system satisfies certain properties, such as correctness, security, or safety, under all possible conditions. This requires a deep understanding of formal methods, logic, and verification techniques, along with the ability to apply these techniques in practice. Skills: To effectively apply formal verification techniques, we need both theoretical and practical skills. Attitude: The right mindset is essential for successfully applying formal verification, as it involves complex, sometimes difficult, problem-solving. |

3. Syllabus

| THEORY OF COMPUTATION SEMESTER – V | | | |
|---|------------------|-------------|------------|
| Course Code | M23BCS501 | CIE Marks | 50 |
| Number of Lecture Hours/Week(L: T: P: S) | (3:0:0:0) | SEE Marks | 50 |
| Total Number of Lecture Hours | 40 Hours | Total Marks | 100 |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| Credits | 03 | Exam Hours | 03 |
|--|----|------------|----|
| Course Objectives: <ol style="list-style-type: none"> 1. Introduce core concepts in Automata and Theory of Computation 2. Identify different Formal language Classes and their Relationships 3. Design Grammars and Recognizers for different formal languages 4. Prove or disprove theorems in automata theory using their properties 5. Determine the decidability and intractability of Computational problems | | | |
| Module -1 | | | |
| Introduction to Finite Automata, Structural Representations, Automata and Complexity. The Central Concepts of Automata Theory. Deterministic Finite Automata, Nondeterministic Finite Automata, An Application: Text Search, Finite Automata with Epsilon-Transitions. Textbook 1: Ch 1.1,1.5,2.2,2.3,2.4,2.5 | | | |
| Module -2 | | | |
| Regular Expressions, Finite Automata and Regular Expressions, Proving Languages not to be Regular. Closure Properties of Regular Languages, Equivalence and Minimization of Automata, Applications of Regular Expressions Textbook 1: Ch 3.1, 3.2 (Except 3.2.1), 3.3, 4.1, 4.2, 4.4 | | | |
| Module -3 | | | |
| Context-Free Language : Context-Free Language and Derivation trees, Ambiguity in context-free grammars, simplifying of context-free grammars, Normal forms for CFGs Textbook 2: Ch 6.1-6.4,7.1 | | | |
| Module -4 | | | |
| Pushdown Automata (PDA): Definition of the Pushdown Automaton, The Languages of a PDA, Equivalence of PDA's and CFG's, Deterministic Pushdown Automata. Properties of Context-Free Languages: The pumping lemma for CFGs; Closure properties of CFLs Textbook 1: Ch 6.1,6.2,6.3.1,6.4,7.2,7.3 | | | |
| Module -5 | | | |
| Turing Machine: Turing machine model, Representation, Language acceptability by TM, design of TM, Techniques for TM construction. Variants of Turing Machines (TM), The model of Linear Bounded automata Decidability: Definition of decidability, decidable languages, Undecidable languages, halting problem of TM, Post correspondence problem. Textbook 2: Ch 9.1-9.8,10.1-10.7 | | | |
| TEXTBOOKS: <ol style="list-style-type: none"> 1. John E Hopcroft, Rajeev Motwani, Jeffrey D. Ullman, "Introduction to Automata Theory, Languages and Computation", Second Edition, Pearson. 2. K L P Mishra, N Chandrasekaran, 3rd Edition, Theory of Computer Science, PHI, 2012. Marketing Management: A relationship approach (2019), Hollensen, S, Pearson Education. REFERENCE BOOKS: <ol style="list-style-type: none"> 1. Elain Rich, "Automata, Computability and complexity", 1st Edition, Pearson Education, 2018. 2. Michael Sipser: Introduction to the Theory of Computation, 3rd edition, Cengage learning, 2013 3. John C Martin, Introduction to Languages and The Theory of Computation, 3rd Edition, Tata McGraw – Hill Publishing Company Limited, 2013 4. Basavaraj S. Anami, Karibasappa K G, Formal Languages and Automata theory, Wiley India, 2012 Faculty can utilize open source tools (like JFLAP) to make teaching and learning more interactive. | | | |

4. Syllabus Timeline

| S/L | Syllabus Timeline | Description |
|-----|-------------------|-------------|
|-----|-------------------|-------------|

| | | |
|---|---|---|
| 5 | 2023 Scheme – 5 th Sem Week 9-10: Pushdown Automata | Definition of the pushdown automata, understand the languages of a PDA; conversion of PDA's and CFG's; Prove that given PDA is Deterministic or not. Understand the Properties of Context-Free Grammar |
| 6 | Week 11: Turing machines | Introduction to Turing machines, Representation TM, designing of TM Variants of Turing machines (multi-tape, nondeterministic, etc.) |
| 7 | Week 12: Decidability | Understand the concept of decidability and undecidable, The Halting problem, Post correspondence problem. |
| 1 | Week 1 Introduction to Theory of Computation | Overview of computation models, Historical context and significance and Introduction to formal languages and automata |
| 2 | Week 2-4: Finite State Machines | Understand the concepts and how to design Deterministic Finite Automata (DFA), Nondeterministic Finite Automata (NFA), ϵ -NFA and Minimizing FSMs, construct Finite State Transducers and Bidirectional Transducers. |
| 3 | Week 5-6: Regular Expressions Regular Grammars | Understand the concepts of Regular expressions and Regular grammar and their equivalence with finite automata, Properties of Regular Languages. |
| 4 | Week 7-8: Context-Free Grammars | Understand the concept of Context-Free Grammars (CFG), Parse trees and derivations, Normal Form and how to eliminate ambiguity in grammar. |

5. Teaching-Learning Process Strategies

| S/L | TLP Strategies: | Description |
|-----|---------------------------------|--|
| 1 | Start with Real-World Examples | Teaching Approach: Begin by introducing concepts using real-world analogies or simple, relatable examples. For instance, explain finite automata using examples like traffic light systems or vending machines. Learning Approach: Encourage students to think of everyday processes or systems that can be modeled by the concepts being studied. |
| 2 | Problem-Based Learning (PBL) | Teaching Approach: Present students with problems that require them to apply theoretical concepts to find solutions. This could involve designing automata for specific tasks, proving language properties, or reducing problems to show complexity classifications. Learning Approach: Engage in active problem-solving during and outside class. Form study groups to tackle challenging problems collectively, enhancing understanding through discussion and collaboration. |
| 3 | Use of Visual Aids and Diagrams | Teaching Approach: Incorporate diagrams, flowcharts, and other visual aids to explain abstract concepts. For instance, use state diagrams to represent finite automata or Turing machines. Learning Approach: Create your own visual representations of concepts as a study tool. Drawing out problems and solutions can help clarify complex ideas. |
| 4 | Collaborative Projects | Teaching Approach: Assign group projects where students can work together to explore a theoretical concept in depth or implement a computational model. Learning Approach: Collaborate effectively with peers, dividing tasks based on individual strengths while ensuring everyone understands the overall project. |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|---|---------------------|---|
| 5 | Multimodal Teaching | Teaching Approach: Incorporate a mix of lectures, visual aids, interactive simulations, group work, and hands-on projects to cater to different learning styles. Learning Approach: Identify your preferred learning style and seek out resources or study methods that align with it, whether it's visual, auditory, reading/writing, or kinesthetic. |
|---|---------------------|---|

6. Assessment Details (both CIE and SEE)

Assessment Details (both CIE and SEE)

The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 40% of the maximum marks (20 marks out of 50). A student shall be deemed to have satisfied the academic requirements and earned the credits allotted to each subject/ course if the student secures not less than 35% (18 Marks out of 50) in the semester-end examination (SEE), and a minimum of 40% (40 marks out of 100) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together **Continuous Internal Evaluation:**

| Components | | Number | Weightage | Max. Marks | Min. Marks |
|--------------------|-------------------------------|--------|-----------|------------|------------|
| (i) | Internal Assessment-Tests (A) | 2 | 50% | 25 | 10 |
| (ii) | Assignments/Quiz/Activity (B) | 2 | 50% | 25 | 10 |
| Total Marks | | | | 50 | 20 |

Final CIE Marks = (A) + (B) Average

internal assessment shall be the average of the 2 test marks conducted.

Semester End Examination:

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

Theory SEE will be conducted as per the scheduled timetable, with common question papers for the subject (duration 03 hours)

1. Question paper pattern will be ten questions. Each question is set for 20marks. The medium of the question paper shall be English unless otherwise it is mentioned.
 2. There shall be 2 questions from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have mix of topics under that module if necessary.
 3. The students have to answer 5 full questions selecting one full question from each module.
 4. Marks scored will be proportionally scaled down to 50 marks
- Semester End Examination:**
1. Question paper pattern will be ten questions. Each question is set for 20 marks. The medium of the question paper shall be English unless otherwise it is mentioned.
 2. There shall be 2 question from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have mix of topics under that module if necessary.
 3. The students have to answer 5 full questions selecting one full question from each module.
 4. Marks scored will be proportionally scaled down to 50 marks.

| S/L | Learning Objectives | Description |
|-----|--|--|
| 1 | Understanding Formal Languages | Explain the concept of formal languages and distinguish between different classes of languages, such as regular, context-free, and context sensitive languages. |
| 2 | Mastering Automata Theory | Design and analyze deterministic and nondeterministic finite automata (DFA and NFA) for recognizing regular languages. Understand and apply the concepts of context-free grammars (CFG) and pushdown automata (PDA) to recognize context-free languages. |
| 3 | Exploring Computability Theory | Understand the concept of Turing machines and their role in defining computation. Analyze the concepts of decidability and undecidability, including understanding the Halting problem and its implications. |
| 4 | Grasping Computational Complexity | Understand and differentiate between complexity classes such as P, NP, NP-complete, and NP-hard. |
| 5 | Applying Theoretical Concepts to Problem-Solving | Use formal methods to prove language properties, such as closure properties and the pumping lemma for regular and context-free languages and also develop problem-solving skills by applying theoretical concepts to real-world scenarios, such as designing algorithms based on automata or analyzing the computational complexity of tasks |

8. Course Outcomes (COs) and Mapping with POs/ PSOs

Course Outcomes (COs)

| Cos | Description |
|-------------|---|
| M23BCS501.1 | Apply the fundamentals of automata theory to write DFA, NFA, Epsilon-NFA and conversion between them. |
| M23BCS501.2 | Design context-free grammars (CFGs) and pushdown automata (PDAs) for formal languages |
| M23BCS501.3 | Design Turing machines to solve the computational problems and also Illustrate the concepts of decidability and undecidability. |
| M23BCS501.4 | Prove the properties of regular languages using regular expressions |

CO-PO-PSO Mapping

| COs/POs | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 | PSO1 | PSO2 |
|-------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|------|------|
| M23BCS501.1 | - | 3 | - | - | - | - | - | - | - | - | - | 2 | 3 | - |
| M23BCS501.2 | - | - | 3 | - | - | - | - | - | - | - | - | 2 | - | 3 |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | | | | | | | | | | | | | |

Semester End Examination (SEE)

| | CO1 | CO2 | CO3 | CO4 | Total |
|--------------|-----------|-----------|-----------|-----------|------------|
| Module 1 | 20 | | | | 20 |
| Module 2 | | | | 20 | 20 |
| Module 3 | | 10 | | | 20 |
| Module 4 | | 10 | | | 20 |
| Module 5 | | | 20 | | 20 |
| Total | 20 | 20 | 20 | 20 | 100 |

Conditions for SEE Paper Setting:

Each module of SEE question paper should be allocated with questions for 20% of the total SEE marks

10.Future with this Subject

1. Advancements in Artificial Intelligence and Machine Learning

- Natural Language Processing (NLP): Automata theory is crucial in the development of NLP algorithms. Understanding regular expressions and finite automata helps in text parsing and tokenization, which are fundamental in building efficient NLP models.
- Pattern Recognition: Automata and formal languages are used in recognizing patterns in data, which is vital in developing AI systems that can learn and adapt.

2. Quantum Computing

- New Computational Models: As quantum computing advances, new models of computation are emerging. Automata theory provides the foundational knowledge necessary to understand and develop quantum automata, which could revolutionize how we process information.
- Formal Verification: Automata theory plays a significant role in formal methods, which are used to verify the correctness of security protocols and systems. As cybersecurity threats grow, the need for rigorous verification methods will increase.
- Intrusion Detection Systems: Automata-based models are used in developing algorithms for detecting and responding to security breaches, helping to enhance the security of systems.

4. Compiler Design and Programming Languages

- Compiler Optimization: Automata theory is integral to the design and optimization of compilers, which translate high-level programming languages into machine code. Future advances in programming languages will continue to rely on automata theory to improve compiler efficiency.
- Language Development: As new programming languages are developed, understanding automata and formal grammars will be key in designing languages that are both powerful and efficient.

5. Internet of Things (IoT) and Embedded Systems

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

- **Finite State Machines(FSMs):** Automata theory underpins the design of finite state machines, which are crucial in the development of IoT devices and embedded systems. As these technologies become more widespread, the need for expertise in automata will grow.

| | | |
|--------------------------------|--|------------------|
| 5th Semester | Integrated Professional Core Course(IPC) Computer Networks and Security | M23BCS502 |
|--------------------------------|--|------------------|

1. Prerequisites

| S/L | Proficiency | Prerequisites |
|------------|----------------------------------|--|
| 1 | Basic Computer Science Knowledge | Basic Computer Science Knowledge: Programming Skills: Familiarity with programming languages such as Python, C, or Java is essential for scripting and automation tasks. Operating Systems: Understanding of operating system concepts, including process management, memory management, and file systems. Data Structures and Algorithms: Knowledge of basic data structures (e.g., arrays, lists, trees) and algorithms (e.g., sorting, searching) is important for problemsolving and optimization. |
| 2 | Networking Fundamentals | OSI and TCP/IP Models: Understanding the OSI model and the TCP/IP stack, including the functions of different layers (physical, data link, network, transport, and application). IP Addressing and Sub-netting: Knowledge of IP address formats (IPv4 and IPv6), subnet masks, and how to perform sub-netting and address allocation. Network Protocols: Familiarity with key protocols such as HTTP, FTP, TCP, UDP, DNS, and DHCP. Routing and Switching: Understanding of how routers and switches operate, including basic routing algorithms and protocols like RIP, OSPF, and BGP. |
| 3 | Network Devices and Technologies | Network Devices: Knowledge of different network devices such as routers, switches, firewalls, and access points. Wireless Technologies: Understanding of wireless networking principles, including Wi-Fi standards and security measures. |
| 4 | Cyber-security Basics | Security Principles: Awareness of core security principles, including confidentiality, integrity, and availability. Common Threats and Attacks: Knowledge of common types of cyber -attacks, such as phishing, malware, ransom-ware, and denial-of-service (DoS) attacks. Cryptography: Basic understanding of cryptographic concepts like encryption, decryption, hashing, and digital signatures. |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|---|-------------------------------|--|
| 5 | Network Security Fundamentals | Firewalls and Intrusion Detection Systems (IDS): Familiarity with how firewalls and IDS/IPS (Intrusion Prevention Systems) function and are configured. VPNs and Encryption: Understanding of Virtual Private Networks (VPNs) and encryption protocols used to secure network communications. Access Control: Knowledge of access control methods, including authentication, authorization, and accounting (AAA). |
| 6 | Hands-On Experience | Lab Practice: Practical experience with network configuration, management, and troubleshooting using tools like Cisco Packet Tracer or GNS3. Security Tools: Familiarity with security tools and techniques, such as network scanners (N-map), penetration testing tools (Metasploit), and security information and event management (SIEM) systems. |

2. Competencies

| S/L | Competency | KSA Description |
|-----|-----------------------|---|
| 1 | Application protocols | Knowledge: Understand the basic functions of application protocols Skills: know the service provided by the DNS, HTTP, FTP Attitudes: Appreciation for the versatility of application protocols and distributed services. |
| 2 | Transport layer | Knowledge: Data volume, destination, and rate are all controlled by transport layer protocols including TCP, UDP, DCCP, and SCTP. Skills: the transport layer receives the packets, sorts them, and looks for faults. Subsequently, Enable efficient network transmission, |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

Attitudes: provide the communication services directly to the application processes

| | | |
|---|--|---|
| | | running on different hosts Knowledge: The main job of this layer is to maintain the quality of the data and pass |
| 3 | Network layers Skills: Selects the best path to transfer the data from source to its destination. Attitudes: The network layer performs packetization on the data. This makes it easier to transmit the data packets in the network. | and transmit it from its source to its destination. There are several important protocols that work in this layer. Knowledge: Mechanisms used to provide confidentiality, identity authentication, integrity authentication, source authentication, and/or support the non-repudiation of information. |
| 4 | Security services and processing | Skills: A mechanism that is designed to detect, prevent, or recover from a security attack. Security Service: A service that enhances the security of data attacks processing systems and information transfers Attitudes: The versatility of security guards across various sectors—from retail to construction, events, and VIP protection, offering specialized services that go beyond general surveillance. Knowledge: There are two main types of cryptography used for digital data and secure messages today: symmetric cryptography and asymmetric cryptography. Hash functions, a third type, doesn't involve use of a key |
| 5 | Cryptography | Skills: Basically to protect their privacy and keep their conversations and data confidential. Cryptography ensures confidentiality by encrypting sent messages using an algorithm with a key only known to the sender and recipient. Attitudes: By employing cryptographic techniques, data security applications help to protect various everyday transactions, ranging from file sharing within business networks to online apps used for banking or shopping.. |
| 6 | computing and its | Knowledge: Associated with cloud computing and determine the best security measures for protecting data with cloud security models. Skills: Identify sensitive or regulated data. Cloud Understand how sensitive data is being accessed and shared. Discover shadow IT (unknown cloud use). security Attitudes: Cloud computing gives your business more flexibility. You can quickly scale resources and storage up to meet business demands without having to invest in physical infrastructure. Knowledge: Internet Engineering Task Force (IETF) standard protocol that provides authentication, privacy and data integrity between two communicating computer applications. |
| 7 | Transport level security | Skills: Transport Security Layer (TLS) is the successor of the Secure Socket Layer (SSL); both are security protocols and are sometimes used interchangeably. Attitudes: TLS is usually implemented on top of TCP (Transmission Control Protocol) which further encrypts Application Layer protocols such as FTP, SMTP, and HTTP. However, it can be implemented on DCCP, UDP, and SCTP Knowledge: Provides protection for web applications against attacks, including |
| 8 | Web security | cross-site scripting, file inclusion, cross-site forgery, Structured Query Language (SQL) injection, and other threats. Skills: A web application firewall (WAF) protects web applications by monitoring and filtering internet traffic that flows between an application and the internet. In this way, a WAF works as a secure web gateway (SWG). Attitudes: Web scanning involves using an application to crawl a website in search for vulnerabilities that can leave it open to a bot, spyware, rootkit, Trojan horse, or distributed denial-of-service (DDoS) attack, It then systematically checks the entire site for potential weaknesses |
| | | |

- 9 **IP security** **Knowledge:** unique identifying number assigned to every device connected to the internet.

| | | |
|--|--|---|
| | | <p>Skills: To protect network data by setting up circuits using IPsec tunnelling in which all data being sent between the two endpoints is encrypted, as with a Virtual Private Network (VPN) connection.</p> <p>Attitudes: IP Security is a versatile and widely adopted security protocol used in various network scenarios, including site-to-site VPNs, remote access VPNs, and secure communication between network devices.</p> |
|--|--|---|

3. Syllabus

| Computer Networks and Security SEMESTER – V | | | |
|--|-------------------------------------|-------------|-----|
| Course Code | M23BCS502 | CIE Marks | 50 |
| Number of Lecture Hours/Week(L: T: P: S) | (2:1:2:0) | SEE Marks | 50 |
| Total Number of Lecture Hours | 40 hours Theory +20 hours Practical | Total Marks | 100 |
| Credits | 04 | Exam Hours | 03 |
| Course Objectives: <ol style="list-style-type: none"> To understand network application architectures and the many types of service protocols such as HTTP, SMTP, FTP, and DNS. Analyze how the transport layer responds to network and application requests with various services and functions such as TCP and UDP. To analyze the network layer and how it is related to routing and security between two data sets and its protocols, broadcast and multicast path. Analyze security services and attacks by using data encryption and decryption techniques with the use of symmetric and asymmetric algorithms. Apply and analyze the access control and network security like cloud security. Transport layer security, web security and IP security. | | | |
| Module -1 | | | |
| Application Layer: Principles of Network Applications: Network Application Architectures, Processes Communicating, Transport Services Available to Applications, Transport Services Provided by the Internet, Application-Layer Protocols. The Web and HTTP: Overview of HTTP, Non-persistent and Persistent Connections, HTTP Message Format, User-Server Interaction: Cookies, Web Caching, The Conditional GET, File Transfer: FTP Commands & Replies, Electronic Mail in the Internet: SMTP, Comparison with HTTP, Mail Message Format, Mail Access Protocols, DNS; The Internet's Directory Service: Services Provided by DNS, Overview of How DNS Works, DNS Records and Messages, Peer-to-Peer Applications: P2P File Distribution, Distributed Hash Tables. Textbook 1: chapter 2.1 to 2.6 | | | |
| Module -2 | | | |
| Transport Layer: Introduction and Transport-Layer Services: Relationship Between Transport and Network Layers, Overview of the Transport Layer in the Internet, Multiplexing and De-multiplexing: Connectionless Transport: UDP, UDP Segment Structure, UDP Checksum, Principles of Reliable Data Transfer: Building a Reliable Data Transfer Protocol, Pipelined Reliable Data Transfer Protocols, Go-Back-N, Selective repeat, Connection Oriented Transport TCP: The TCP Connection, TCP Segment Structure, Round-Trip Time Estimation and Timeout, Reliable Data Transfer, Flow Control, TCP Connection Management. Textbook 1: Chapter 3.1 to 3.5 | | | |
| Module -3 | | | |

The Network layer: What's Inside a Router? Input Processing, Switching, Output Processing, Where Does Queuing Occur? Routing control plane, IPv6, A Brief foray into IP Security, Routing Algorithms: The Link-State (LS) Routing Algorithm, The Distance-Vector (DV) Routing Algorithm, Hierarchical Routing, Routing in the Internet, Intra-AS Routing in the Internet: RIP, Intra-AS Routing in the Internet: OSPF, Inter/AS Routing: BGP, Broadcast Routing Algorithms and Multicast. Textbook 1: Ch 4: 4.3-4.7

Module -4

Computer Security Concepts: The OSI Security Architecture, Security Attacks, Security Services.
Symmetric Ciphers: Symmetric Cipher Model, Substitution Techniques, Transposition Techniques.
Cryptosystem::Block Cipher and the Data Encryption Standard: The Data Encryption Standard, **Advanced Encryption Standard (AES):** Finite Field Arithmetic, AES Structure, **Public-Key Cryptography and RSA:** Principles of Public-Key Cryptosystems, The RSA Algorithm, Diffie-Hellman Key Exchange
 Textbook 2: Ch 1.1 to 1.4, Ch 2.1 to 2.3, Ch 3.2, Ch 5.1 to 5.2, Ch 9.1 to 9.2, 10.1

Module -5

Network access control and cloud security: IEEE 802.1X Port-Based Network Access Control, Cloud Computing, Cloud Security Risks and Countermeasures, **Transport level security:** Web Security Considerations, Secure Sockets Layer, Transport Layer Security, **IP Security :** IP Security Overview Textbook 2: Ch 16.4 to 16.5, Ch 17.1 to 17.3, Ch 20.1

PRACTICAL COMPONENT

Part –A

| | |
|---|---|
| 1 | Implement Three nodes point – to – point network with duplex links between them for different topologies. 1 Set the queue size, vary the bandwidth, and find the number of packets dropped for various iterations |
| 2 | Implement simple ESS and with transmitting nodes in wire-less LAN by simulation and determine the throughput with respect to transmission of packets. |
| 3 | Using TCP/IP sockets, write a client – server program to make the client send the file name and to make the server send back the contents of the requested file if present and implement the above program using as message queues or FIFOs as IPC channels |
| 4 | Write a program on datagram socket for client/server to display the messages on Client side, typed at the server side. |

Part –B

| | |
|---|--|
| 5 | Implement transmission of ping messages/trace route over a network topology consisting of 6 nodes and find the number of packets dropped due to congestion in the network. |
| 6 | Write a program to find the shortest path between vertices using bellman-ford algorithm. |
| 7 | Write a program for simple RSA algorithm to encrypt and decrypt the data |
| 8 | Implement and study the performance of GSM on NS2/NS3 (Using MAC layer) or equivalent environment. |

TEXT BOOKS:

1. James F Kurose and Keith W Ross, Computer Networking, A Top-Down Approach, Sixth edition, Pearson, 2017 .
2. Cryptography and Network Security: Principles and Practice, William Stallings, Pearson , Sixth Edition . (<http://www.pearsonhighered.com/stallings/>)

REFERENCE BOOKS:

1. Computer-Networks- Andrew S.Tanenbaum and David J.Wetherall, Pearson Education, 5th Edition. (www.pearsonhighered.com/tanenbaum)
2. Nader F Mir, Computer and Communication Networks, 2nd Edition, Pearson, 2014.

4. Syllabus Timeline

| S/L | Syllabus Timeline | Description |
|-----|---|--|
| 1 | Week 1-3: Application layer | Competency: Understand the basic functions of application protocols Knowledge: understand the various functions of application protocols process and service. Skills: know the service provided by the DNS, HTTP, FTP |
| 2 | Week 4-6: Transport layer | Competency: Understand the concept of transport layer and its segments and services Knowledge: Data volume, destination, and rate are all controlled by transport layer protocols including TCP, UDP, DCCP, and SCTP. Skills: the transport layer receives the packets, sorts them, and looks for faults. Subsequently, Enable efficient network transmission, |
| 3 | Week 7-8: Network layer | Competency: Understand the concept of The network layer performs packetization on the data. This makes it easier to transmit the data packets in the network Knowledge: The main job of this layer is to maintain the quality of the data and pass and transmit it from its source to its destination. There are several important protocols that work in this layer. Skills: Selects the best path to transfer the data from source to its destination Knowledge |
| 4 | Week 9-10: Computer security concepts and Cryptosystem | Competency: Understand the concept of security attacks and services and analyse the cryptanalysis and various security attacks Knowledge: Mechanisms used to provide confidentiality, identity authentication, integrity authentication, source authentication, and/or support the nonrepudiation of information. Skills: A mechanism that is designed to detect, prevent, or recover from a security attack. Security Service: A service that enhances the security of data processing systems and information transfers |
| 5 | Week 11-12: Network access control and security concepts | Competency: Analyses the network access control and various security concepts Knowledge: Unique identifying number assigned to every device connected to the internet. Skills: To protect network data by setting up circuits using IPsec tunnelling in which all data being sent between the two endpoints is encrypted, as with a Virtual Private Network (VPN) connection. |

5. Teaching-Learning Process Strategies

| S/L | TLP Strategies: | Description |
|-----|---|--|
| 1 | Lecture Method | Utilize various teaching methods within the lecture format to network layers and security. |
| 2 | Video/Animation | Incorporate visual aids like videos/animations to enhance understanding of network components and protocols. |
| 3 | Collaborative Learning | Encourage collaborative learning for improved competency application. |
| 4 | Higher Order Thinking (HOTS) Questions: | Pose HOTS questions to stimulate critical thinking related to each competency |
| 5 | Real-World Application | Discuss practical applications to connect theoretical concepts with real-world competencies. |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|---|-------------------------|---|
| 6 | Flipped Class Technique | Utilize a flipped class approach, providing materials before class to facilitate deeper understanding of competencies |
| 7 | Laboratory Learning | Utilize the facilities available in the laboratories to understand the process of network layers and protocols. |

6. Assessment Details (both CIE and SEE)

The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 40% of the maximum marks (20 marks out of 50). A student shall be deemed to have satisfied the academic requirements and earned the credits allotted to each subject/ course if the student secures not less than 35% (18 Marks out of 50) in the semester-end examination (SEE), and a minimum of 40% (40 marks out of 100) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together

Theory Course with 4 credits: Integrated Professional Core Course (IPC)

| Components | | Number | Weightage | Max. Marks | Min. Marks |
|----------------------|---------------------------------|------------|-------------|------------|------------|
| Theory (A) | Internal Assessment-Tests (A) | 2 | 60% | 15 | 06 |
| | Assignments/Quiz/Activity (B) | 2 | 40% | 10 | 04 |
| | Total Marks | | 100% | 25 | 10 |
| Components | | Number | Weightage | Max. Marks | Min. Marks |
| Laboratory(B) | Record Writing | Continuous | 60% | 15 | 06 |
| | Test at the end of the semester | 1 | 40% | 10 | 04 |
| | Total Marks | | 100% | 25 | 10 |

Final CIE Marks = (A) + (B) Semester

End Examination pattern:

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

1. Question paper pattern will be ten questions. Each question is set for 20 marks. The medium of the question paper shall be English unless otherwise it is mentioned.
2. There shall be 2 question from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have mix of topics under that module if necessary.
3. The students have to answer 5 full questions selecting one full question from each module.
4. The question paper may include at least one question from the laboratory component.
5. Marks scored will be proportionally scaled down to 50 marks

7. Learning Objectives

| S/L | Learning Objectives | Description |
|-----|--|--|
| 1 | Application layer | Students should understand the fundamental principles, components, and functions of network layers, such as protocol mechanisms, processes, and file transformation through client-server interaction. |
| 2 | Transport layers | Learning how processes are created, scheduled, transmitted, and all layers are interrelated to each other and learning each mechanism of transport layer. |
| 3 | Network layers | Learn about the network layer and how it relates to routing and security between two data sets, as well as its protocols, broadcast and multicast paths, including the Routing Algorithm, the Distance-Vector (DV) Routing Algorithm, and hierarchical routing. |
| 4 | Security attacks services and Cryptosystem | Understand security services and attacks that use data encryption and decryption techniques based on symmetric and asymmetric algorithms. |
| 5 | Network access control and Various security concepts | Analyse access control and network security, including cloud security. Transport layer security, online security, and IP security issues covered include the OSI Security Architecture, symmetric and asymmetric algorithms, and other network access and security concepts. |

8. Course Outcomes (COs) and Mapping with POs/ PSOs

Course Outcomes (COs)

| Cos | Description |
|--------------------|---|
| M23BCS502.1 | Understand and apply application layer, architecture and protocols. |
| M23BCS502.2 | Analyse the transport layer services and UDP and TCP protocols. |
| M23BCS502.3 | Develop the routers, IP and Routing Algorithms in network layer. |
| M23BCS502.4 | Understand and evaluate the various security attacks, services, symmetric and asymmetric ciphers and standards. |
| M23BCS502.5 | Design and develop the network access control and various security management. |

CO-PO-PSO Mapping

| COs/POs | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 | PSO1 | PSO2 |
|--------------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|------|------|
| M23BCS502.1 | 3 | - | - | 3 | - | 3 | - | - | - | 3 | - | - | 3 | - |
| M23BCS502.2 | - | 3 | - | 3 | - | 3 | - | - | - | 3 | - | - | - | 3 |
| M23BCS502.3 | - | - | 3 | 3 | - | 3 | - | - | - | 3 | 3 | - | 3 | - |
| M23BCS502.4 | - | - | - | 3 | - | 3 | - | - | - | 3 | 3 | - | - | 3 |
| M23BCS502.5 | - | - | 3 | 3 | - | 3 | - | - | - | 3 | 3 | - | 3 | 3 |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | | | | | | | | | | | | | |
|------------------|----------|----------|----------|----------|----------|----------|----------|----------|----------|----------|----------|----------|----------|----------|

|------------------|----------|----------|----------|----------|----------|----------|----------|----------|----------|----------|----------|----------|----------|----------|

9. Assessment Plan

Continuous Internal Evaluation (CIE)

| | CO1 | CO2 | CO3 | CO4 | CO5 | Total |
|--------------|------------|------------|------------|------------|------------|--------------|
| Module 1 | 10 | | | | | 10 |
| Module 2 | | 10 | | | | 10 |
| Module 3 | | | 10 | | | 10 |
| Module 4 | | | | 10 | | 10 |
| Module 5 | | | | | 10 | 10 |
| Total | 10 | 10 | 10 | 10 | 10 | 50 |

Semester End Examination (SEE)

| | CO1 | CO2 | CO3 | CO4 | CO5 | Total |
|--------------|------------|------------|------------|------------|------------|--------------|
| Module 1 | 20 | | | | | 20 |
| Module 2 | | 20 | | | | 20 |
| Module 3 | | | 20 | | | 20 |
| Module 4 | | | | 20 | | 20 |
| Module 5 | | | | | 20 | 20 |
| Total | 20 | 20 | 20 | 20 | 20 | 100 |

10.Future with this Subject:

Application layer: Application layer protocols are the messaging protocols that these IoT devices used to transport data. Without application layer protocols, Internet of Things devices would have no means by which to share data and information either from device-to-device or from device-to-server.

Transport layer: Some of the transport layer devices are, Gateways: In computer networking, a gateway is a component that is part of two networks, which use different protocols. The gateway is a protocol converter which will translate one protocol into the other. The transport layer provides a total end-to-end solution for reliable communications. TCP/IP relies on the transport layer to effectively control communications between two hosts. When an IP communication session must begin or end, the transport layer is used to build this connection

Network layer: The scope of networking courses is very high and promising. The courses offered in the networking domain are the most in-demand and leading. Networking jobs are increasing, and so is the demand for Network Engineers. Dwell in the networking jobs in India and boost your career in the IT industry and emerging technologies shaping the future of networking:

5G Networks: 5G technology is the most delinquent generation of mobile communication networks, providing faster speeds and enhanced dependability compared to earlier generations.

Computer Security Concepts and Crypto-system: The future of cyber security is closely connected to quantum computing because quantum computers could change how we protect and use data. Right now, most of the ways we keep information safe in cyber security rely on the fact that some math problems are really hard for regular computers to solve.

Network access control and various security concepts: Future NAC solutions will focus on improving user experience by implementing seamless authentication mechanisms, frictionless onboarding processes, and userfriendly interfaces for policy management and self-service capabilities. The NAC can also provide endpoint security protection such as antivirus software, firewall, and vulnerability assessment with security enforcement policies and system authentication methods.

| | | |
|--------------------------|---|-----------|
| 5 th Semester | Professional Core Course(PC) Advanced Database Management Systems | M23BCS503 |
|--------------------------|---|-----------|

1. Prerequisites

| S/L | Proficiency | Prerequisites |
|-----|---------------------------------------|--|
| 1 | Fundamentals of Data and Information. | Familiarize yourself with the concepts of data, information, and knowledge. Understand the differences between structured and unstructured data. |
| 2 | SQL Skills. | Mastery in writing complex SQL queries, including advanced joins, sub queries, and set operations. Proficiency in creating and managing stored Procedures, functions and triggers. |
| 3 | Database design and Modeling. | Expertise in designing scalable and efficient database schemas. Proficiency in normalization, de-normalization, and data modeling techniques. |
| 4 | Database Optimization Skills. | Skills in performance tuning and query optimization. Understanding of indexing strategies and execution plans. |
| 5 | Problem-Solving Skills. | Develop your analytical and problem-solving skills, as designing efficient and effective databases often requires making trade-offs and optimizing for different scenarios. |

2. Competencies

| S/L | Competency | KSA Description |
|-----|---|--|
| 1 | Relational Data Model and Relational Database Constraints | Knowledge: Understand the principles of Relational Data Model. Skills: Entity-Relationship diagrams (ERDs). Attitudes: These concepts help design efficient and organized database. |
| 2 | Disk Storage, Basic File Structures | Knowledge: Gain basic knowledge of Disk Storage, Basic File Structures. Skills: The knowledge used to handle database storage. Attitudes: The foundation of databases organization. |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|---|--|---|
| 3 | NOSQL Databases and Big Data Storage Systems: | Knowledge: the basics of NOSQL. Skills: Writing queries to retrieve, update, and manipulate data. Attitudes: Acquired skill to be used for querying with relational databases. |
| 4 | Enhanced Data Models: | Knowledge: Learn about Enhanced Data Models:. Skills: To eliminate and enhance data models. Attitudes: Understand the concept of enhance data models |
| 5 | Data Mining Concepts | Knowledge: Gain insight into Data Mining Concepts. Skills: To design data Mining Concepts for a particular application. Attitudes: To enhance data mining performance. |

3. Syllabus

| Advanced Database Management Systems SEMESTER – V | | | |
|---|------------------|-------------|------------|
| Course Code | M23BCS503 | CIE Marks | 50 |
| Number of Lecture Hours/Week(L: T: P: S) | (4:0:0:0) | SEE Marks | 50 |
| Total Number of Lecture Hours | 42 Hours | Total Marks | 100 |
| Credits | 03 | Exam Hours | 03 |
| Course objectives: 1. Strong foundation in advanced database concepts from an industry perspective. | | | |

| |
|--|
| 2. The database management system contributes with advanced data modeling concepts like OOD Modeling and ORD Modeling. |
| 3. The advanced database system arranges query processing and transaction management concepts for objectrelational database and distributed database. |
| 4. To demonstrate the use of concurrency and transactions in database. |
| Module -1 |
| Review of Relational Data Model and Relational Database Constraints: Relational model concepts; Relational model constraints and relational database schemas; Update operations, anomalies, dealing with constraint violations, Types and violations. Object and Object-Relational Databases: Overview of Object Database Concepts, Object Database Extensions to SQL, The ODMG Object Model and the Object Definition Language ODL, Object Database Conceptual Design, The Object Query Language OQL. |
| Module -2 |
| Disk Storage, Basic File Structures, Hashing, and Modern Storage Architectures: Introduction, Secondary Storage Devices, Buffering of Blocks, Placing File Records on Disk Operations on Files, Files of Unordered Records (Heap Files), Files of Ordered Records (Sorted Files), Hashing Techniques, Other Primary File Organizations. |
| Module -3 |
| NOSQL Databases: Introduction to NOSQL Systems, The CAP Theorem, DocumentBased NOSQL Systems and MongoDB, NOSQL Key-Value Stores, Column-Based or Wide Column NOSQL Systems, NOSQL Graph Databases and Neo4j. |
| Module -4 |
| Enhanced Data Models: Introduction to Active, Temporal, Spatial, Multimedia, and Deductive Databases: Active Database Concepts and Triggers, Temporal Database Concepts, Spatial Database Concepts, Multimedia Database Concepts, Introduction to Deductive Databases. |
| Module -5 |
| Data Mining Concepts: Overview of Data Mining Technology, Association Rules, Classification, Clustering. Overview of Data Warehousing and OLAP: Introduction, Definitions, and Terminology, Characteristics of Data Warehouses, Data Modelling for Data Warehouses, building a Data Warehouse, Typical Functionality of a Data Warehouse, Data Warehouse versus Views, Difficulties of Implementing Data Warehouses. |
| Text Books: |
| 1. Fundamentals of Database Systems, Elmasri and Navathe, Pearson Education 2013. |
| 2. Database Management Systems, Raghu Ramakrishnan and Johannes Gehrke, McGraw-Hill, 3rd Edition, 2013. |
| Reference Books: |
| 1. Database System Concepts, Abraham Silberschatz, Henry F. Korth, S. Sudarshan, McGraw Hill, 6th Edition, 2010. |
| 2. C. J. Date, "Introduction to Database Systems", 8th Edition, Pearson Education, 2009. |

4. Syllabus Timeline

| S/L | Syllabus Timeline | Description |
|-----|-------------------|--|
| 1 | Week 1-3 | Review of Relational Data Model and Relational Database Constraints: Relational model concepts; Relational model constraints and relational database schemas; Update operations, anomalies, dealing with constraint violations, Types and violations. Object and Object-Relational Databases: Overview of Object Database Concepts, Object Database Extensions to SQL, The ODMG Object Model and the Object Definition Language ODL, Object Database Conceptual Design, The Object Query Language OQL. |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|----------|------------|--|
| 2 | Week 4-6 | Disk Storage, Basic File Structures, Hashing, and Modern Storage Architectures: Introduction, Secondary Storage Devices, Buffering of Blocks, Placing File Records on Disk Operations on Files, Files of Unordered Records (Heap Files), Files of Ordered Records (Sorted Files), Hashing Techniques, Other Primary File Organizations. |
| 3 | Week 7-9 | Disk Storage, Basic File Structures, Hashing, and Modern Storage Architectures: Introduction, Secondary Storage Devices, Buffering of Blocks, Placing File Records on Disk Operations on Files, Files of Unordered Records (Heap Files), Files of |
| | | Ordered Records (Sorted Files), Hashing Techniques, Other Primary File Organizations. |
| 4 | Week 10-12 | Enhanced Data Models: Introduction to Active, Temporal, Spatial, Multimedia, and Deductive Databases: Active Database Concepts and Triggers, Temporal Database Concepts, Spatial Database Concepts, Multimedia Database Concepts, Introduction to Deductive Databases. |
| 5 | Week 13-15 | Data Mining Concepts: Overview of Data Mining Technology, Association Rules, Classification, Clustering. Overview of Data Warehousing and OLAP: Introduction, Definitions, and Terminology, Characteristics of Data Warehouses, Data Modelling for Data Warehouses, building a Data Warehouse, Typical Functionality of a Data Warehouse, Data Warehouse versus Views, Difficulties of Implementing Data Warehouses. |

5. Teaching-Learning Process Strategies

| S/L | TLP Strategies: | Description |
|-----|------------------------------|--|
| 1 | Lecture Method | Using traditional lecture methods and ICT as and when needed. |
| 2 | Video/Animation | Incorporate visual aids like videos/animations to enhance learning. |
| 3 | Collaborative Learning | Encourage collaborative learning approaches for peer learning. |
| 4 | Problem-Based Learning (PBL) | Implement PBL to enhance analytical skills and practical application. |
| 5 | Real-World Application | Discuss practical applications to connect theoretical concepts with real-world competencies. |
| 6 | Programming Assignments | Assign programming tasks to reinforce practical skills associated with competencies. |

6. Assessment Details (both CIE and SEE)

The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 40% of the maximum marks (20 marks out of 50). A student shall be deemed to have satisfied the academic requirements and earned the credits allotted to each subject/ course if the student secures not less than 35% (18 Marks out of 50) in the semester-end examination(SEE), and a minimum of 40% (40 marks out of 100) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together **Continuous Internal Evaluation:**

| Components | | Number | Weightage | Max. Marks | Min. Marks |
|------------|-------------------------------|--------|-----------|------------|------------|
| (i) | Internal Assessment-Tests (A) | 2 | 50% | 25 | 10 |
| (ii) | Assignments/Quiz/Activity (B) | 2 | 50% | 25 | 10 |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | | |
|--|--------------------|-----------|-----------|
| | Total Marks | 50 | 20 |
|--|--------------------|-----------|-----------|

Final CIE Marks = (A) + (B)

Average internal assessment shall be the average of the 2 test marks conducted.

CIE methods /question paper is designed to attain the different levels of Bloom's taxonomy as per the outcome defined for the course.

Semester End Examination:

Theory SEE will be conducted as per the scheduled timetable, with common question papers for the subject **(duration 03 hours)**

1. Question paper pattern will be ten questions. Each question is set for 20marks. The medium of the question paper shall be English unless otherwise it is mentioned.
2. There shall be 2 question from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have mix of topics under that module if necessary.
3. The students have to answer 5 full questions selecting one full question from each module.
4. Marks scored will be proportionally scaled down to 50 marks.

7. Learning Objectives

| S/L | Learning Objectives | Description |
|-----|--|---|
| 1 | Advanced database concepts | Strong foundation in advanced database concepts from an industry perspective. |
| 2 | Advanced data modeling concepts | The database management system contributes with advanced data modeling concepts like OOD Modeling and ORD Modeling. |
| 3 | Object-relational database and distributed database. | The advanced database system arranges query processing and transaction management concepts for object-relational database and distributed database. |
| 4 | Concurrency and transactions. | To demonstrate the use of concurrency and transactions in database. |

8. Course Outcomes (COs) and Mapping with POs/ PSOs Course Outcomes (COs):

| COs | Description |
|--------------------|---|
| M23BCS503.1 | Infer and represent the real-world data using object-oriented database |
| M23BCS503.2 | Interpret rule set in the database to implement data warehousing of mining |
| M23BCS503.3 | Categorize and design database for recent applications database for better interoperability |

CO-PO-PSO Mapping:

| COs/POs | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 | PSO1 | PSO2 |
|--------------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|------|------|
| M23BCS503.1 | - | 3 | 3 | - | - | - | - | - | - | - | - | - | 3 | - |
| M23BCS503.2 | - | - | 3 | 3 | - | - | - | - | - | - | - | - | 3 | 3 |
| M23BCS503.3 | - | 3 | 3 | - | - | - | - | - | - | - | - | - | - | 3 |
| M23BCS503 | - | 3 | 3 | 3 | - | - | - | - | - | - | - | - | 3 | 3 |

9. Assessment Plan

Continuous Internal Evaluation (CIE)

| | CO1 | CO2 | CO3 | Total |
|----------|-----------|-----------|-----|-----------|
| Module 1 | 10 | | | 10 |
| Module 2 | 5 | | | 5 |
| Module 3 | | 10 | | 10 |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | | | |
|--------------|-----------|-----------|-----------|-----------|
| Module 4 | | 5 | 10 | 15 |
| Module 5 | | | 10 | 10 |
| Total | 15 | 15 | 20 | 50 |

Semester End Examination (SEE)

| | | | | |
|--------------|-----------|-----------|-----------|--------------|
| | CO1 | CO2 | CO3 | Total |
| Module 1 | 20 | | | 20 |
| Module 2 | 10 | | | 10 |
| Module 3 | | 20 | | 20 |
| Module 4 | | 10 | 20 | 30 |
| Module 5 | | | 20 | 20 |
| Total | 30 | 30 | 40 | 100 |

Conditions for SEE Paper Setting:

Each module of SEE question paper should be allocated with questions for 20% of the total SEE marks

10. Future with this Subject:

- **Predictive Analytics:** DBMS will increasingly integrate AI and ML to provide predictive analytics, helping businesses make data-driven decisions.
- **Automated Database Management:** AI will enable automated tuning, indexing, and query optimization, reducing the need for manual intervention.
- **Cloud-Based Databases:** Cloud-based DBMS will continue to grow, offering scalable and flexible solutions that can handle large volumes of data.
- **Distributed Databases and Architectures:** There will be a rise in distributed databases that can handle data across multiple locations, improving performance and reliability.
- **Block chain and Decentralized Databases:** Block chain technology will be integrated into DBMS for applications needing secure, immutable records.
- **Enhanced Security and Privacy:** Data Encryption: Advanced encryption techniques will be crucial to protect sensitive data from breaches.

| | | |
|--------------------------------|--|-------------------|
| 5th Semester | Professional Core Course Laboratory(PCL) ADBMS Laboratory | M23BCSL504 |
|--------------------------------|--|-------------------|

1. Prerequisites

| S/L | Proficiency | Prerequisites |
|----------|--------------------------------|---|
| 1 | Basic Database Concepts | Understanding of fundamental database concepts, including tables, relations, primary and foreign keys, and normalization. |
| 2 | SQL Proficiency | Ability to write and execute SQL queries, including SELECT, INSERT, UPDATE, DELETE, and JOIN operations. Knowledge of advanced SQL features like sub-queries, indexes, views and triggers. |
| 3 | Database Design | Skills in designing ER diagrams and converting them into relational schema. Familiarity with normalization and de-normalization techniques. |
| 4 | Programming skills | Experience with at least one programming language (e.g., Java, Python, C#) that can be used for database connectivity and operations. Understanding of how to use database connectors/APIs (like JDBC for Java, psycopg2 for Python) |
| 5 | Transaction Management | Knowledge of transactions, ACID properties, and isolation levels. Understand the concurrency control and recovery. |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|----------|-----------------------------------|---|
| 6 | Data Modeling and Analysis | Experience with data modeling tools and techniques, Ability to perform data analysis using SQL and other tools. |
|----------|-----------------------------------|---|

2. Competencies

| S/L | Competency | KSA Description |
|-----|---|---|
| 1 | Advanced SQL Skills | Mastery in writing complex SQL queries, including advanced joins, sub queries, and set operations Proficiency in creating and managing stored procedures, functions, and triggers |
| 2 | Database Optimization | Skills in performance tuning and query optimization. Understanding of indexing strategies and execution plans. |
| 3 | Database design and modeling | Expertise in designing scalable and efficient database schemas. Proficiency in normalization, de-normalization, and data modeling techniques. |
| 4 | Transaction Management and Concurrency Control | Deep understanding of transaction processing, ACID properties, and isolation levels. Knowledge of concurrency control mechanisms and techniques to handle deadlocks |
| 5 | Database security | Competence in implementing database security measures, including user authentication, authorization, and encryption. Skills in managing roles and permissions Acquire knowledge of feature engineering techniques to extract relevant information from raw data and improve model performance. |
| 6 | Distributed databases | Knowledge of distributed database concepts, including sharing, replication, and consistency models Ability to design and manage distributed database systems. |
| 7 | Big data Technologies | Understanding of big data frameworks like Hadoop and Spark. Competence in working with large datasets and performing data analysis |
| 8 | Data Warehousing and Business Intelligence | Skills in designing and implementing data warehouses. efficiency in using BI tools for data visualization and reporting Knowledge of ETL processes and tools. |
| 9 | Data integrity and quality | Ensuring data integrity through constraints, triggers, and validation rules. |

3. Syllabus

| ADBMS Laboratory SEMESTER – V | | | |
|--|-------------------|-------------|------------|
| Course Code | M23BCSL504 | CIE Marks | 50 |
| Number of Lecture Hours/Week(L: T: P: S) | (0:0:2:0) | SEE Marks | 50 |
| Total Number of Lecture Hours | 24 Hours | Total Marks | 100 |
| Credits | 01 | Exam Hours | 03 |
| PART A : The following experiments may be implemented on My SQL/ORACLE or other suitable RDBMS with support for object features | | | |

Develop a database application to demonstrate storing and retrieving of BLOB and CLOB objects.

- Write a binary large object (BLOB) to a database as either binary or character (CLOB) data, depending on the type of the field in your data source. To write a BLOB value to the database, issue the appropriate INSERT or UPDATE statement and pass the BLOB value as an input parameter. If your BLOB is stored as text, such as a SQL Server text field, pass the BLOB as a string parameter. If the BLOB is stored in binary format, such as a SQL Server image field, pass an array of type byte as a binary parameter.
- Once storing of BLOB and CLOB objects is done, retrieve them and display the results accordingly.

Develop a database application to demonstrate the representation of multi valued attributes, and the use of nested tables to represent complex objects. Write suitable queries to demonstrate their use.

- Consider Purchase Order Example: This example is based on a typical business activity: managing customer orders. Need to demonstrate how the application might evolve from relational to object-relational, and how you could write it from scratch using a pure object-oriented approach.
- Show how to implement the schema -- Implementing the Application under the Relational Model -- using only Oracle's built-in datatypes. Build an object-oriented application on top of this relational schema using object views

Design and develop a suitable Student Database application by considering appropriate attributes.

Couple of attributes to be maintained is the Attendance of a student in each subject for which he/she has enrolled and Internal Assessment Using TRIGGERS, write active rules to do the following:

- Whenever the attendance is updated, check if the attendance is less than 85%; if so, notify the Head of the Department concerned.
- Whenever, the marks in an Internal Assessment Test are entered, check if the marks are less than 40%; if so, notify the Head of the Department concerned.

Use the following guidelines when designing triggers:

- Use triggers to guarantee that when a specific operation is performed, related actions are performed.
- Use database triggers only for centralized, global operations that should be fired for the triggering statement, regardless of which user or database application issues the statement.
- Do not define triggers that duplicate the functionality already built into Oracle. For example, do not define triggers to enforce data integrity rules that can be easily enforced using declarative integrity constraints.
- Limit the size of triggers (60 lines or fewer is a good guideline). If the logic for your trigger requires much more than 60 lines of PL/SQL code, it is better to include most of the code in a stored procedure, and call the procedure from the trigger.
- Be careful not to create recursive triggers. For example, creating an AFTER UPDATE statement trigger on the EMP table that itself issues an UPDATE statement on EMP causes the trigger to fire recursively until it has run out of memory.

Design, develop, and execute a program to implement specific Apriori algorithm for mining association rules. Run the program against any large database available in the public domain and discuss the results.

- Association rules are if/then statements that help uncover relationships between seemingly unrelated data in a relational database or other information repository. An example of an association rule would be "If a customer buys a dozen eggs, he is 80% likely to also purchase milk."

PART B: Develop a mini project

Conduction of Practical Examination:

- All laboratory experiments are to be included for practical examination.
- Evaluation: 50% of the marks allotted for lab experiment execution and remaining 50% marks for the project demo.
- Students are allowed to pick one experiment from list of the experiment
- Strictly follow the instructions as printed on the cover page of answer script for breakup of marks

Change of experiment is allowed only once and marks allotted to the procedure part to be made zero.

4. Syllabus Timeline

| S/L | Syllabus Timeline | Description |
|-----|-------------------|--|
| 1 | Week 1-2: | Introduction, basic programs example and execution procedure |
| 2 | Week 3-4: | Program1 |
| 3 | Week 5-7: | Program2 |
| 4 | Week 8-10: | Program3 |
| 5 | Week 11-12: | Mini project |

5. Teaching-Learning Process Strategies

| S/L | TLP Strategies: | Description |
|-----|---|---|
| 1 | Hands-on Lab Sessions | Focus on practical, hands-on lab sessions where students can apply theoretical concepts to real-world scenarios. Use a variety of database management systems (e.g., MySQL, PostgreSQL, Oracle) to expose students to different environments. |
| 2 | Project-Based Learning | Assign projects that require students to design, implement, and optimize a complete database system. Encourage collaborative projects to foster teamwork and peer learning. |
| 3 | Case Studies and Real-World Examples | Integrate case studies that showcase real-world applications of advanced DBMS concepts. Analyze and discuss these case studies in class to provide practical insights. |
| 4 | Interactive Lectures and Demonstrations | Use interactive lectures to explain complex topics, supplemented by live demonstrations of database tools and techniques. Encourage student participation and questions during these sessions |
| 5 | Problem-Solving Sessions | Conduct regular problem-solving sessions where students work on complex queries, optimization tasks, and troubleshooting exercises. Provide immediate feedback and guidance |
| 6 | Research and Innovation | Encourage students to explore current research topics in advanced DBMS and present their findings. Support innovative ideas and projects that push the boundaries of traditional database management. |
| 7 | Assessment through Presentations and Reports | Include assessments that require students to present their projects and findings, reinforcing their communication and presentation skills. Require detailed project reports that document their design choices, implementation process, and lessons learned. |

6. Assessment Details (both CIE and SEE)

Marks distribution for Program based Practical Course for CIE

| Sl. No. | Description | % of Marks | In Marks |
|---------|--|--------------------|----------|
| 1 | Observation, write-up, algorithm/program/execution | 80% of the maximum | 80 |
| 2 | Viva-Voce | 20% of the maximum | 20 |
| Total | | 100% | 100 |

Marks scored by the student for 100 are scaled down to 50 marks.

SEE for practical Course (Irrespective of Experiment or program based):

Marks distribution for Experiment based Practical Course for Final CIE

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| SL. No. | Description | % of Marks | Marks |
|--------------|-----------------------|-------------|------------|
| 1 | Write-up, Procedure | 20% | 20 |
| 2 | Conduction and result | 60% | 60 |
| 3 | Viva-Voce | 20% | 20 |
| Total | | 100% | 100 |

1. SEE marks for practical course shall be 50 marks
2. See for practical course is evaluated for 100 marks and scored marks shall be scaled down to 50 marks.
3. Change of experiment/program is allowed only once and 20% marks allotted to the procedure/write-up part to be made zero.

4. Duration of SEE shall be 3 hours. 7. Learning Objectives

| S/L | Learning Objectives | Description |
|-----|---|--|
| 1 | Understanding complex queries, optimization and transaction management. | To provide a thorough understanding of advanced database management system concepts, including complex queries, optimization techniques, and transaction management |
| 2 | Advanced SQL skills | To develop advanced SQL skills for creating, managing, and optimizing databases using sophisticated queries, stored procedures, triggers, and functions |
| 3 | Efficient and scalable database schemas | To equip students with the ability to design efficient and scalable database schemas through advanced data modeling and normalization techniques |
| 4 | Business intelligence tools | To provide knowledge on data warehousing concepts, ETL processes, and the use of business intelligence tools for data analysis and reporting |
| 5 | Database security. | To emphasize the importance of database security, teaching students how to implement user authentication, authorization, encryption, and secure database management practices. |

8. Course Outcomes (COs) and Mapping with POs/ PSOs

Course Outcomes (COs)

| Cos | Description |
|---------------------|--|
| M23BCSL504.1 | Demonstrate a deep understanding of complex database management system with various queries and attributes in practices. |
| M23BCSL504.2 | Apply on advanced SQL queries, including sub-queries, joins, stored procedures Blob, Clob and triggers |
| M23BCSL504.3 | Analyze No SQL database models and big data technologies in appropriate scenarios. |

CO-PO-PSO Mapping

| COs/Pos | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 | PSO1 | PSO2 |
|---------------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|------|------|
| M23BCSL504.1 | - | 3 | 3 | 3 | 3 | - | - | - | - | - | - | - | 3 | - |
| M23BCSL504.2 | - | - | 3 | 3 | 3 | - | - | - | - | - | - | - | 3 | 3 |
| M23BCSL504.3 | - | 3 | 3 | 3 | 3 | - | - | - | - | - | - | - | - | 3 |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | | | | | | | | | | | | | |
|------------|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| M23BCSL504 | - | 3 | 3 | 3 | 3 | - | - | - | - | - | - | - | 3 | 3 |
|------------|---|---|---|---|---|---|---|---|---|---|---|---|---|---|

9. Assessment Plan

Continuous Internal Evaluation (CIE)

| | CO1 | CO2 | CO3 | CO4 | CO5 | Total |
|-----------------|-----------|----------|-----------|----------|-----------|-----------|
| Program 1 to 10 | 15 | 5 | 10 | 5 | 15 | 50 |
| Total | 15 | 5 | 10 | 5 | 15 | 50 |

Semester End Examination (SEE)

| | CO1 | CO2 | CO3 | CO4 | CO5 | Total |
|-----------------|-----------|-----------|-----------|-----------|-----------|------------|
| Program 1 to 10 | 30 | 10 | 20 | 10 | 30 | 100 |
| Total | 30 | 10 | 20 | 10 | 30 | 100 |

Conditions for SEE Paper Setting:

Each module of SEE question paper should be allocated with questions for 20% of the total SEE marks

10. Future with this Subject:

- **Career Advancement: Database Administrator:** Manage and maintain database systems, ensuring their performance, security, and availability **Database Developer:** Design and develop database applications, optimizing data storage and retrieval **Data Analyst/Scientist:** Analyze complex datasets to provide insights and support data-driven decision-making.
- **Expertise in Emerging Technologies:** Gain proficiency in NoSQL databases, big data technologies, and data warehousing solutions, which are increasingly in demand across various industries.
- **Research and Development** Engage in cutting-edge research in database technologies, contributing to advancements in areas like distributed databases, data mining, and machine learning.
- **Entrepreneurial Opportunities:** Leverage advanced DBMS skills to develop innovative data-driven solutions and start new ventures in the tech industry
- **Enhanced Problem-Solving Skills:** Develop strong analytical and problem-solving skills that are transferable to various domains, including software development, system architecture, and IT consultancy.
- **Improved Public Services:** Contribute to the development of efficient public services by designing robust database systems for government and non-profit organizations.

| | | |
|--------------------------|---|------------|
| 5 th Semester | Professional Elective-I (PE) COMPUTER GRAPHICS | M23BCS505A |
|--------------------------|---|------------|

1. Prerequisites

| S/L | Proficiency | Prerequisites |
|-----|-------------------------------|--|
| 1 | Programming Skills | <ul style="list-style-type: none"> Languages: Proficiency in languages like C++, Python, or Java is often crucial. C++ is particularly common due to its performance and control over system resources, but Python can be useful for prototyping and scripting. Concepts: Understanding basic programming concepts such as variables, control structures (loops, conditionals), functions, and data structures (arrays, lists) is essential. |
| 2 | Mathematics | <ul style="list-style-type: none"> Linear Algebra: Vectors, matrices, and transformations (such as translation, rotation, scaling) are fundamental in graphics. Concepts like dot products, cross products, and matrix multiplication are regularly used. Geometry: Basic geometric concepts including points, lines, and polygons. Knowledge of coordinate systems and spatial relationships is crucial. Calculus: Understanding derivatives and integrals can be helpful, especially for more advanced topics like rendering equations and animations. |
| 3 | Computer Science Fundamentals | <ul style="list-style-type: none"> Data Structures and Algorithms: Knowledge of data structures like arrays, linked lists, trees, and algorithms for sorting and searching can be beneficial for efficiently handling graphics data. Software Engineering Principles: Understanding concepts like modularity, object-oriented design, and debugging techniques.. |
| 4 | Computer Architecture: | <ul style="list-style-type: none"> Basic Hardware Knowledge: Understanding how computers process data, including concepts like CPU, GPU, memory hierarchy, and parallel processing, can help in optimizing graphics performance. . |
| 5 | Graphics-Specific Knowledge: | <ul style="list-style-type: none"> Basic Graphics Concepts: Familiarity with fundamental graphics concepts such as rendering pipelines, rasterization, and shading can be helpful. APIs and Frameworks: Knowledge of graphics libraries and APIs like OpenGL, DirectX, or Vulkan is important for developing graphics applications. Familiarity with game engines like Unity or Unreal Engine can also be useful. |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|----------|-------------------------------------|--|
| 6 | Operating Systems: | <ul style="list-style-type: none"> • Basic OS Concepts: Understanding how operating systems manage processes, memory, and file systems can aid in creating efficient graphics applications. |
| 7 | Mathematical Software Tools: | <ul style="list-style-type: none"> • Visualization Tools: Familiarity with software tools for visualizing mathematical concepts (e.g., MATLAB, Mathematica) can be useful, especially for complex calculations and simulations |

2.Competencies

| S/L | Competency | KSA Description |
|------------|----------------------------------|---|
| 1 | Graphics Programming | <p>Knowledge: Proficiency in programming languages commonly used in graphics programming such as C++, Python, or Java. Understanding vectors, matrices, and transformations, and their application in graphics (e.g., modeling, transformations, and camera projections).</p> <p>Skills: Ability to write, debug, and optimize code for graphics applications. Applying mathematical algorithms to solve graphics-related problems, such as collision detection and procedural generation.</p> <p>Attitudes: Ability to think creatively and develop unique visual effects and solutions to graphics challenge</p> |
| 2 | Mathematics for Graphics: | <p>Knowledge:</p> |

| | | |
|---|--|--|
| | | <p>Knowledge of how to use vectors and matrices for transformations, such as translation, rotation, and scaling of graphical objects.</p> <p>Knowledge of different coordinate systems (Cartesian, polar, etc.) and their conversions.</p> <p>Understanding geometric transformations such as translation, rotation, scaling, and shearing.</p> <p>Skills:</p> <p>Skill in implementing mathematical transformations in code, such as matrix multiplication for object manipulation.</p> <p>Ability to apply geometric principles to model and manipulate shapes and surfaces.</p> <p>Attitudes:</p> <p>A willingness to continually learn and explore new mathematical techniques and advancements relevant to graphics.</p> |
| 3 | Rendering Techniques: | <p>Knowledge:</p> <p>Knowledge of how ray tracing uses geometric calculations to simulate the paths of rays of light and determine the color and brightness of pixels.</p> <p>Understanding how rasterization converts geometric data (e.g., triangles) into pixel data and how this process involves mathematical operations such as interpolation and scanline algorithms.</p> <p>Skills:</p> <p>Skills in implementing ray tracing algorithms, including calculating intersections, reflections, and refractions.</p> <p>Proficiency in coding rasterization algorithms, including handling edge functions and interpolating pixel values.</p> <p>Attitudes:</p> <p>Commitment to accurate mathematical computations and precise implementation of rendering algorithms to ensure high-quality results.</p> <p>A dedication to refining rendering techniques to achieve the best possible visual fidelity and performance.</p> |
| 4 | Data Structures and Algorithms: | <p>Knowledge:</p> <p>Knowledge of how arrays, linked list, stacks and queues work, their indexing, and their applications.</p> <p>Knowledge of working of heap, graphs and trees</p> <p>Skills:</p> <p>Proficiency in implementing various algorithms and data structures in programming languages such as C++, Java, or Python.</p> <p>Skills in optimizing algorithms for efficiency in terms of time and space.</p> <p>Attitudes:</p> <p>Ability to critically analyze problems, identify suitable data structures and algorithms, and evaluate their effectiveness.</p> <p>Precision in implementing and testing algorithms to ensure accuracy and efficiency.</p> |
| 5 | 3D Modeling and Animation: | <p>Knowledge:</p> <p>Knowledge of fundamental modeling techniques such as transformations, leveling, and edge looping.</p> <p>Awareness of good topology practices to ensure models are clean, manageable, and efficient for animation.</p> <p>Skills:</p> <p>Ability to create accurate and detailed 3D models using various techniques and tools.</p> <p>Skills in optimizing 3D models for performance, including reducing polygon count and managing textures efficiently.</p> <p>Attitudes:</p> <p>Willingness to explore creative ideas and approaches in modeling and animation. An eye for aesthetics and attention to detail in creating visually appealing models and animations.</p> |

| | | |
|---|----------------------------|---|
| 6 | Software and Tools: | Knowledge: Knowledge of tools like Adobe Photoshop, CorelDRAW for creating and editing 2D images and textures. |
| | | Skills: Understanding of software such as spyder ,openGL API Skills in navigating and utilizing the features and functionalities of graphics software effectively. Attitudes: A willingness to continuously learn about new tools, updates, and techniques in the field of computer graphics. |

3. Syllabus

| COMPUTER GRAPHICS SEMESTER – V | | | |
|--|-------------------|-------------|------------|
| Course Code | M23BCS505A | CIE Marks | 50 |
| Number of Lecture Hours/Week(L: T: P: S) | (3:0:0:0) | SEE Marks | 50 |
| Total Number of Lecture Hours | 40 Hours | Total Marks | 100 |
| Credits | 03 | Exam Hours | 03 |
| Course Objectives: 1.To learn hardware, software and OpenGL Graphics Primitives 2.To analyze interactive computer graphics using OpenGL 3. To design and implement algorithms for 2D graphics Primitives and attributes. 4. To Demonstrate Geometric transformations, viewing on both 2D and 3D objects 5. To Infer the representation of curves, surfaces, color and Illumination models. | | | |
| Module -1 | | | |
| Computer Graphics and OpenGL: Computer Graphics: Basics of computer graphics, Application of Computer Graphics, Random Scan and Raster Scan displays, graphics software. OpenGL: Introduction to OpenGL ,coordinate reference frames, specifying twodimensional world coordinate reference frames in OpenGL, OpenGL point functions, OpenGL line functions, point attributes, line attributes, OpenGL point attribute functions, OpenGL line attribute functions. Text Book - 1:Chapter -1,2,3; | | | |
| Module -2 | | | |
| Line drawing and Circle drawing algorithm. and 2D & 3D Geometric Transformation: Line drawing algorithms(DDA, Bresenham's), circle generation algorithms (Bresenham's). 2D Geometric Transformations: Basic 2D Geometric Transformations, matrix representations and homogeneous coordinates. Inverse transformations, 2D Composite transformations, other 2D transformations. OpenGL geometric transformations function, Transformations: 3D translation, rotation, scaling, composite 3D transformations. OpenGL geometric transformations functions. Text Book -1:Chapter -5,6,8; | | | |
| Module -3 | | | |
| 2D viewing & Clipping: 2D viewing: 2D viewing pipeline, OpenGL 2D viewing functions. Clipping: clipping window, normalization and viewport transformations, clipping algorithms, 2D point clipping, 2D line clipping algorithms: cohen-sutherland line clipping only -polygon fill area clipping: Sutherland-Hodgeman polygon clipping algorithm only. Text Book - 1:Chapter -7; | | | |
| Module -4 | | | |

3D Viewing:

3D Viewing: 3D viewing concepts, 3D viewing pipeline, 3D viewing coordinate parameters, Transformation from world to viewing coordinates, Projection transformation, orthogonal projections, perspective projections, The viewport transformation and 3D screen coordinates. OpenGL 3D viewing functions..

Text Book -1: Chapter -9;

Module -5**Input & interaction & Color and Illumination Models:**

Input and Interaction: Input devices, Display Lists, Display Lists and Modeling, Programming Event Driven Input, Menus Picking, Logic operations.

Color Models: Properties of light, color models, RGB and CMY color models. Illumination Models: Light sources, basic illumination models-Ambient light, diffuse reflection, specular and phong model, Corresponding OpenGL functions.

Text Book -1: Chapter -12, Text Book 2- Chapter 3;

TEXTBOOKS:

1. Donald Hearn & Pauline Baker: Computer Graphics with OpenGL Version, 3rd / 4th Edition, Pearson Education, 2011
2. Edward Angel: Interactive Computer Graphics- A Top Down approach with OpenGL, 5th edition. Pearson Education, 2008

REFERENCE BOOKS:

1. James D Foley, Andries Van Dam, Steven K Feiner, John F Huges Computer graphics with OpenGL: pearson education
2. Xiang, Plastock : Computer Graphics, sham's outline series, 2nd edition, TMG

4. Syllabus Timeline

| S/L | Syllabus Timeline | Description |
|-----|--|--|
| 1 | Week 1-3: Computer Graphics and OpenGL | <ul style="list-style-type: none"> Understanding basics of computer graphics, Application of Computer Graphics: Random Scan and Raster Scan displays, graphics software. OpenGL: Introduction to OpenGL, OpenGL point functions, OpenGL line functions, OpenGL line attribute functions, |
| 2 | Week 4-5: Line drawing and Circle drawing algorithm. and 2D & 3D Geometric Transformation: | <ul style="list-style-type: none"> Line drawing algorithms (DDA, Bresenham's), circle generation algorithms (Bresenham's) Understanding 2D Geometric Transformations: Basic 2D Geometric Transformations, 2D Composite transformations, 3D Geometric Transformation. |
| 3 | Week 6-8: 2D viewing & Clipping: | <ul style="list-style-type: none"> Understanding Clipping: clipping window, clipping algorithms, 2D point clipping, 2D line clipping algorithms: Cohen-Sutherland line clipping only - polygon fill area clipping: Sutherland-Hodgeman polygon clipping algorithm. s. . |
| 4 | Week 9-10: 3D viewing | <ul style="list-style-type: none"> Understanding 3D Viewing: 3D viewing concepts, 3D viewing pipeline, 3D viewing coordinate parameters, OpenGL 3D viewing functions. , Visible Surface Detection Methods: Classification of visible surface Detection algorithms.. |
| 5 | Week 11-13 Input and interaction, Colour and Illumination models | <ul style="list-style-type: none"> Input and Interaction: Input devices, clients and servers, Display Lists, Building Interactive Models, Understanding about colour and illumination model. |

5. Teaching-Learning Process Strategies

| S/L | TLP Strategies: | Description |
|-----|-------------------------|---|
| 1 | Lecture Method | Utilize various teaching methods within the lecture format to reinforce competencies. |
| 2 | Video/Animation | Incorporate visual aids like videos/animations to enhance understanding the concepts. |
| 3 | Collaborative Learning | Encourage collaborative learning for improved competency application. |
| 4 | Real-World Application | Discuss practical applications to connect theoretical concepts with real-world competencies. |
| 5 | Flipped Class Technique | Utilize a flipped class approach, providing materials before class to facilitate deeper understanding of competencies |
| 6 | Laboratory Learning | Utilize the facilities available in the laboratories to understand the behavior of the materials by performing few experiments. |

6. Assessment Details (both CIE and SEE) Continuous Internal Evaluation:

The minimum CIE marks requirement is 40% of maximum marks in each component.

CIE Split up

| Components | | Number | Weightage | Max. Marks | Min. Marks |
|--------------------|-------------------------------|--------|-----------|------------|------------|
| (i) | Internal Assessment-Tests (A) | 2 | 50% | 25 | 10 |
| (ii) | Assignments/Quiz/Activity (B) | 2 | 50% | 25 | 10 |
| Total Marks | | | | 50 | 20 |

Final CIE Marks =(A) + (B)

Average internal assessment shall be the average of the 2 test marks conducted.

Semester End Examination:

1. Question paper pattern will be ten questions. Each question is set for 20marks. The medium of the question paper shall be English unless otherwise it is mentioned.
2. There shall be 2 question from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have mix of topics under that module if necessary.
3. The students have to answer 5 full questions selecting one full question from each module.
4. Marks scored will be proportionally scaled down to 50 marks

7. Learning Objectives

| S/L | Learning Objectives | Description |
|-----|---|--|
| 1 | Basics of computer graphics | learn about the evolution of computer graphics, different types of graphics (2D and 3D), and key terms such as pixels, resolution, and color models. |
| 2 | 2D geometric transformations and viewing | Learn about fundamental transformations such as translation, scaling, and rotation. Understand how these operations affect the position, size, and orientation of geometric objects. |
| 3 | Clipping and clipping windows | Learn why clipping is necessary for rendering efficiency and visual accuracy. Study how clipping windows define the region of interest in world coordinates and how viewports map these regions to screen coordinates. |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|---|---|--|
| 4 | 3D geometric transformations | Gain a foundational understanding of basic 3D transformations and their effects on objects. Learn about fundamental transformations in 3D space, including translation, rotation, and scaling. Understand how these transformations affect the position, orientation, and size of 3D objects. |
| 5 | 3d viewing | Gain a foundational understanding of 3D viewing and how it affects rendering. Learn about the concept of the camera or view frustum, which defines the 3D space visible to the user. Understand the role of the viewing volume in determining what is rendered. |
| 6 | Understand the Fundamentals of Animation | Gain a foundational understanding of key principles and concepts in computer animation. Learn about the basic principles of animation such as timing, spacing, squash and stretch, anticipation, and follow-through. Understand how these principles contribute to creating realistic and engaging animations |

8. Course Outcomes (COs) and Mapping with POs/ PSOs

| Cos | Description |
|---------------------|---|
| M23BCS505A.1 | Understand and Apply fundamental concepts of computer graphics 2D graphics primitives and attributes |
| M23BCS505A.2 | Analyze different Geometric transformations on both 2D and 3D objects. |
| M23BCS505A.3 | Design and implement algorithms of clipping and visible surface detection in 2D and 3D viewing, and Illumination Models. |
| M23BCS505A.4 | Develop programs and graphics packages using OpenGL, suitable hardware and software. |

CO-PO-PSO Mapping

| COs/POs | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 | PSO1 | PSO2 |
|---------------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|------|------|
| M23BCS505A.1 | 3 | | - | - | - | - | - | - | - | - | - | - | 3 | - |
| M23BCS505A.2 | - | 3 | - | - | - | - | - | - | - | - | - | - | - | 3 |
| M23BCS505A.3 | - | - | 3 | | - | - | - | - | - | - | - | - | 3 | - |
| M23BCS505A.4 | - | - | - | 3 | - | - | - | - | - | - | - | - | - | 3 |
| M23BCS505A | 3 | 3 | 3 | 3 | | | | | | | | | 3 | 3 |

9. Assessment Plan

Continuous Internal Evaluation (CIE)

| | CO1 | CO2 | CO3 | CO4 | Total |
|--------------|-----|-----|-----|-----|-------|
| Module 1 | 10 | | | | 10 |
| Module 2 | | 10 | | | 10 |
| Module 3 | | | 10 | | 10 |
| Module 4 | | | | 10 | 10 |
| Module 5 | | | | 10 | 10 |
| Total | 10 | 10 | 10 | 20 | 50 |

Semester End Examination (SEE)

| | CO1 | CO2 | CO3 | CO4 | Total |
|--|-----|-----|-----|-----|-------|
|--|-----|-----|-----|-----|-------|

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | | | | |
|--------------|-----------|-----------|-----------|-----------|------------|
| Module 1 | 20 | | | | 20 |
| Module 2 | | 20 | | | 20 |
| Module 3 | | | 20 | | 20 |
| Module 4 | | | | 20 | 20 |
| Module 5 | | | | 20 | 20 |
| Total | 20 | 20 | 20 | 40 | 100 |

10. Future with this Subject:

- **Real-Time RayTracing** -Real-time ray tracing, enabled by advancements in GPU technology, allows for highly realistic rendering by simulating the behavior of light in a scene. This technique produces high-quality reflections, refractions, and shadows.
- **Enhanced Virtual and Augmented Reality (VR/AR)**-VR and AR technologies are evolving rapidly, offering more immersive and interactive experiences. Advancements in graphics technology will improve the visual fidelity and responsiveness of VR and AR applications.
- **AI and Machine Learning Integration**-Artificial intelligence (AI) and machine learning are increasingly being integrated into graphics processes. These technologies can enhance image generation, improve rendering efficiency, and automate tasks such as texture creation and character animation.
- **.High Dynamic Range (HDR) and Wide Color Gamut** : HDR and wide color gamut technologies enhance the range of brightness and color accuracy in graphics. As displays and content production tools adopt these technologies, visual quality will improve significantly.
- **Advanced Graphics Processing Units (GPUs)**-Future GPUs will continue to push the boundaries of performance and efficiency. Innovations in GPU architecture, memory, and parallel processing will drive advancements in graphics rendering and computation.

| | | |
|--------------------------|---|-------------------|
| 5 th Semester | Professional Elective (PE) CLOUD COMPUTING | M23BCS505B |
|--------------------------|---|-------------------|

1. Prerequisites

| S/L | Proficiency | Prerequisites |
|-----|---------------------------------|--|
| 1 | Programming Fundamentals | Students should have a solid understanding of programming concepts, particularly in Python, as it is widely used in data science for data manipulation, analysis, and machine learning. Knowledge of data structures (e.g., lists, dictionaries) and control structures (e.g., loops, conditionals) is essential. |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|---|---------------------------------------|--|
| 2 | Mathematics: | Understanding of solving linear and quadratic equations Proficiency in differential and integral calculus, including applications. Familiarity with geometric shapes, angles, trigonometric functions, and their properties. |
| 3 | Computer Networks and Security | Computer Networks, Network Security Understanding of network protocols, TCP/IP, DNS, and basic network configurations. Information Security, Cryptography |
| 4 | Operating Systems | Operating Systems, Systems Programming. Knowledge of process management, memory management, file systems, and system calls. |
| 5 | Fundamentals of Probability | Knowledge of probability theory, including conditional probability, Bayes' theorem, and probability distributions, is essential. This will help students understand the statistical underpinnings of many data science algorithms, such as Naive Bayes |

2. Competencies

| S/L | Competency | KSA Description |
|-----|---------------------------------|---|
| 1 | Introduction to cloud computing | Knowledge: Understanding the definition, scope, and significance of Cloud computing. Awareness of the Historical Developments, Building Cloud Computing Environments, Amazon Web Services (AWS), Google App Engine. Skills: Ability to articulate the role and impact of Cloud in various industries. Skill in identifying the different components of the Cloud workflow. Attitudes: Curiosity about the evolving field of Cloud and its applications. Appreciation for the interdisciplinary nature of Cloud, integrating statistics, mathematics, and domain knowledge. |
| 2 | Virtualization | Knowledge: Understanding the Cloud computing that enables the creation and management of virtual instances of physical resources, such as servers, storage, and networks. Skills: Problem-solving and project management capabilities . Attitudes: The right mindset can significantly impact how effectively one can implement, manage, and optimize virtualized environments |
| 3 | Cloud Computing Architecture | Knowledge: Understanding the Detailed overview of the knowledge components related to cloud computing architecture sub-components required for cloud computing. These components typically consist of a front-end platform (client or device), back-end platforms (servers, storage), a cloud-based delivery, and a network (usually the internet). Skills: Blend of technical skills, strategic thinking, and an understanding of the underlying principles and best practices, Cloud Service Model Expertise, Virtualization and Networking Attitudes: |
| | | Play a crucial role in the effective design, implementation, and management of cloud computing architecture. |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|---|-----------------------------|--|
| 4 | Cloud Platforms in Industry | Knowledge: Understanding of Compute services, Storage services, Communication services, Additional services. Google Architecture and core concepts, Application life cycle. Skills: Edge Computing , Architectural Design, Data Management and Analytics and Troubleshooting and Support Attitudes: Attention to detail in cloud platforms |
| 5 | Cloud Applications | Knowledge: Competency-based knowledge for cloud applications typically encompasses a variety of skills across multiple domains, including infrastructure, development. Skills: Cloud applications are focused on technical proficiency, problem-solving, and the ability to leverage cloud platforms to create, deploy, and manage applications efficiently. Attitudes: Attention to detail in cloud Application. |

3. Syllabus

| CLOUD COMPUTING SEMESTER – V | | | |
|--|-------------------|-------------|------------|
| Course Code | M23BCS505B | CIE Marks | 50 |
| Number of Lecture Hours/Week(L: T: P: S) | (3:0:0:0) | SEE Marks | 50 |
| Total Number of Lecture Hours | 40 Hours | Total Marks | 100 |
| Credits | 03 | Exam Hours | 03 |
| Course Objectives: 1. Compare cloud computing environment utilized for real time applications. 2. Identify various models of cloud computing. 3. Analyze how to design cloud native applications. 4. Examine the importance of Cloud Virtualization Technologies. | | | |
| Module -1 | | | |
| Introduction ,Cloud Computing at a Glance, Historical Developments, Building Cloud Computing Environments, Amazon Web Services (AWS), Google App Engine, Microsoft Azure, Hadoop, Force.com and Salesforce.com, Manjrasoft Aneka Textbook 1: Chapter 1: 1.1,1.2 and 1.3 | | | |
| Module -2 | | | |
| Virtualization: Introduction, Characteristics of Virtualized, Environments Taxonomy of Virtualization Techniques, Execution Virtualization, Other Types of Virtualization, Virtualization and Cloud Computing, Pros and Cons of Virtualization, Technology Examples. Textbook 1 : Chapter 3: 3.1 to 3.6 | | | |
| Module -3 | | | |
| Cloud Computing Architecture: Introduction, Cloud Reference Model, Types of Clouds, Economics of the Cloud, Open Challenges. Textbook 1: Chapter 4: 4.1 to 4.5 | | | |
| Module -4 | | | |
| Cloud Platforms in Industry Amazon web services: - Compute services, Storage services, Communication services, Additional services. Google AppEngine: - Architecture and core concepts, Application life cycle, Cost model, Observations. Textbook 1: Chapter 9: 9.1 to 9.2 | | | |
| Module -5 | | | |

Cloud Applications

Scientific applications: - HealthCare: ECG analysis in the cloud, Biology: gene expression data analysis for cancer diagnosis, Geoscience: satellite image processing. Business and consumer applications: CRM and ERP, Social networking, media applications.

Textbook 1: Chapter 10: 10.1 to 10.2

Textbooks

1. Rajkumar Buyya, Christian Vecchiola, and Thamrai Selvi Mastering Cloud Computing McGraw Hill Education.
2. Toby Velte, Anthony Velte, Cloud Computing: A Practical Approach, McGraw-Hill Osborne Media.

Reference Books

1. Borko Furht, Armando Escalante, "Handbook of Cloud Computing", Springer
2. George Reese, Cloud Application Architectures: Building Applications and Infrastructure in the Cloud, O'Reilly Publication.

4. Syllabus Timeline

| S/L | Syllabus Timeline | Description |
|-----|-------------------|---|
| 1 | Week 1-3: | Introduction, Cloud Computing at a Glance, Historical Developments, Building Cloud Computing Environments, Amazon Web Services (AWS), Google AppEngine, Microsoft Azure, Hadoop, Force.com and Salesforce.com |
| 2 | Week 4-6: | Virtualization: Introduction, Characteristics of Virtualized, Environments Taxonomy of Virtualization Techniques, Execution Virtualization, Other Types of Virtualization, Virtualization and Cloud Computing, Pros and Cons of Virtualization |
| 3 | Week 8-11: | Cloud Computing Architecture: Introduction, Cloud Reference Model, Types of Clouds, Economics of the Cloud, Open Challenges |
| 4 | Week 7-8: | Cloud Platforms in Industry Amazon web services: - Compute services, Storage services, Communication services, Additional services. Google AppEngine: - Architecture and core concepts, Application life cycle, Cost model. |
| 5 | Week 9-12: | Cloud Applications Scientific applications: - HealthCare: ECG analysis in the cloud, Biology: gene expression data analysis for cancer diagnosis, Geoscience: satellite image processing. Business and consumer applications: CRM and ERP, Social networking, media applications. |

5. Teaching-Learning Process Strategies

| S/L | TLP Strategies: | Description |
|-----|--|---|
| 1 | Lectures and Interactive Discussions | Provide clear, concise explanations of key concepts, theories, and algorithms in each module. Use visual aids, such as slides and diagrams, to enhance understanding. |
| 2 | Case Studies and Real-World Applications | Incorporate visual aids like videos/animations to enhance understanding the concepts. Incorporate case studies like the Real Direct example in Week 4 to demonstrate the application of data science concepts in real-world scenarios. This helps students see the relevance of what they are learning. |
| 3 | Collaborative Learning | Encourage collaborative learning for improved competency application. |
| 4 | Project-Based Learning | Organize students into small groups to discuss complex topics, such as the ethical implications of data science |

| | | |
|---|--------------------------------------|---|
| 5 | Lectures and Interactive Discussions | Provide clear, concise explanations of key concepts, theories, and algorithms in each module. Use visual aids, such as slides and diagrams, to enhance understanding. |
|---|--------------------------------------|---|

6. Assessment Details (both CIE and SEE) Continuous Internal Evaluation:

The minimum CIE marks requirement is 40% of maximum marks in each component.

CIE Split up

| Components | | Number | Weightage | Max. Marks | Min. Marks |
|--------------------|-------------------------------|--------|-----------|------------|------------|
| (i) | Internal Assessment-Tests (A) | 2 | 50% | 25 | 10 |
| (ii) | Assignments/Quiz/Activity (B) | 2 | 50% | 25 | 10 |
| Total Marks | | | | 50 | 20 |

Final CIE Marks = (A) + (B)

Average internal assessment shall be the average of the 2 test marks conducted.

Semester End Examination:

1. Question paper pattern will be ten questions. Each question is set for 20 marks. The medium of the question paper shall be English unless otherwise it is mentioned.
2. There shall be 2 question from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have mix of topics under that module if necessary.
3. The students have to answer 5 full questions selecting one full question from each module.
4. Marks scored will be proportionally scaled down to 50 marks

7. Learning Objectives

| S/L | Learning Objectives | Description |
|-----|---------------------------------|--|
| 1 | Introduction to Cloud Computing | Students will be able to define cloud computing and explain its significance in the context Cloud Computing Environments. |
| 2 | Virtualization | Students will be able to know the Characteristics of Virtualized, Environments Taxonomy of Virtualization Techniques, Execution Virtualization, Other Types of Virtualization. |
| 3 | Cloud Computing Architecture: | Cloud Reference Model, Types of Clouds, Economics of the Cloud, Open Challenges. |
| 4 | Cloud Platforms in Industry | Amazon web services: - Compute services, Storage services, Communication services, Additional services. Google AppEngine: - Architecture and core concepts, Application life cycle, Cost model |
| 5 | Cloud Applications | Students will be able know cloud application like Health ECG analysis in the cloud, and gene expression data analysis for cancer diagnosis. |

8. Course Outcomes (COs) and Mapping with POs/ PSOs**Course Outcomes (COs)**

| Cos | Description |
|---------------------|--|
| M23BCS505B.1 | Compare cloud computing environment utilized for real time applications. |
| M23BCS505B.2 | Identify various models of cloud computing. |
| M23BCS505B.3 | Analyze how to design cloud native applications. |
| M23BCS505B.4 | Examine the importance of Cloud Virtualization Technologies. |

CO-PO-PSO Mapping

| COs/POs | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 | PSO1 | PSO2 |
|---------------------|----------|----------|-----|----------|-----|----------|-----|-----|-----|------|------|----------|----------|----------|
| M23BCS505B.1 | 3 | - | - | - | - | - | - | - | - | - | - | - | 3 | 3 |
| M23BCS505B.2 | 3 | - | - | - | - | - | - | - | - | - | - | - | 3 | 3 |
| M23BCS505B.3 | 3 | 3 | - | 3 | - | 3 | - | - | - | - | - | 3 | 3 | 3 |
| M23BCS505B.4 | 3 | - | - | - | - | - | - | - | - | - | - | - | 3 | 3 |
| M23BCS505B | 3 | 3 | | 3 | | 3 | | | | | | 3 | 3 | 3 |

9. Assessment Plan**Continuous Internal Evaluation (CIE)**

| | CO1 | CO2 | CO3 | CO4 | Total |
|--------------|-----------|-----------|-----------|-----------|-----------|
| Module 1 | 10 | | | | 10 |
| Module 2 | | 10 | | | 10 |
| Module 3 | | | 10 | | 10 |
| Module 4 | | | | 10 | 10 |
| Module 5 | | | | 10 | 10 |
| Total | 10 | 10 | 10 | 20 | 50 |

Semester End Examination (SEE)

| | CO1 | CO2 | CO3 | CO4 | Total |
|--------------|------------|------------|------------|------------|--------------|
| Module 1 | 20 | | | | 20 |
| Module 2 | | 20 | | | 20 |
| Module 3 | | | 20 | | 20 |
| Module 4 | | | | 20 | 20 |
| Module 5 | | | | 20 | 20 |
| Total | 20 | 20 | 20 | 20 | 100 |

10. Future with this Subject:

- ✦ **Serverless Architectures:** Simplifying application deployment and scaling by abstracting server management. This includes further advancements in Function as a Service (FaaS) and Backend as a Service (BaaS).
- ✦ **Edge Computing:** Expanding cloud capabilities to the edge of the network to reduce latency and improve performance, particularly for IoT and real-time applications.
- ✦ **Artificial Intelligence and Machine Learning:** Integrating AI and ML with cloud services to enable more intelligent automation, enhanced analytics, and better decision-making capabilities
- ✦ **Security and Privacy:** Advancing encryption, identity management, and threat detection to address growing concerns about data protection and compliance in cloud environments.
- ✦ **Quantum Computing:** Exploring how quantum computing can be integrated into cloud platforms to tackle complex problems beyond the capabilities of classical computers.
- ✦ **Advanced Networking:** Developing new networking technologies and protocols to support the growing demands of cloud computing, including better support for high-speed data transfer and network slice

| | | |
|--------------------------|--|------------|
| 5 th Semester | Professional Elective-I (PE) Web of things | M23BCS505C |
|--------------------------|--|------------|

1. Prerequisites

| S/L | Proficiency | Prerequisites |
|-----|----------------------------------|--|
| 1 | Basic Computer Science Knowledge | Familiarity with programming languages such as Python, JavaScript, or Java. These languages are commonly used in IoT development and scripting for WoT. |
| 2 | Data structures and applications | Understanding basic data structures (arrays, lists, dictionaries) and algorithms is crucial for developing efficient IoT applications. |
| 3 | Networking Fundamentals | Knowledge of how networks operate, including concepts like IP addresses, DNS, HTTP/HTTPS, TCP/IP, and basic networking topologies. HTTP/HTTPS and Web Sockets, which are essential for communication in IoT and WoT. |
| 4 | Database Knowledge | Familiarity with database concepts, including SQL and NoSQL databases, for storing and retrieving data generated by IoT devices. |
| 5 | Fundamental Electronics | Understanding basic electronic components and circuits can be helpful, especially for hands-on IoT projects involving sensors and actuators. |

2. Competencies

| S/L | Competency | KSA Description |
|-----|------------------------------------|---|
| 1 | Introduction to IoT | Knowledge: Knowledge of understanding basic technologies used in IoT devices. Skills: Ability to understand characteristics and applications of IoT. Attitudes: To understand the different levels of IoT designs. |
| 2 | IoT platform design methodology | Knowledge: Familiarity with web protocols and technologies including RESTful APIs, JSON, XML, and how they facilitate IoT communication. Skills: Proficiency in developing software for IoT devices, including firmware, application code, and user interfaces. Attitudes: A commitment to staying updated with the latest JavaScript standards, frameworks, and best practices. |
| 3 | IoT physical devices and Endpoints | Knowledge: Knowledge of the components and architecture of IoT systems, including sensors, actuators, gateways, and cloud services. Skills: Ability to integrate various IoT devices, sensors, and actuators into functional systems. Attitudes: A strong desire to understand how IoT systems work, including the latest technologies, protocols, and standards. |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|----------|--|--|
| 4 | IoT physical servers and cloud offerings: | Knowledge: Knowledge of IoT security practices, including encryption, authentication, and secure communication protocols. Skills: Ability to implement and deploy IoT solutions, including setting up devices, configuring networks, and ensuring system interoperability. Attitudes: Ability to design and implement solutions to access IoT technologies using sensors/actuators |
| 5 | Case Studies | Knowledge: Understanding of how to design and develop RESTful APIs and work with APIs for integrating and managing IoT devices. Skills: Ability to plan and manage IoT projects, including defining requirements, setting milestones, and allocating resources. Attitudes: An attitude of creativity and innovation when faced with complex problems or challenges in IoT system design and implementation. |

3. Syllabus

| Web of things | | | |
|---|-------------------|-------------|------------|
| Course Code | M23BCS505C | CIE Marks | 50 |
| Number of Lecture Hours/Week(L: P: SDA) | (3:0:0:0) | SEE Marks | 50 |
| Total Hours of Pedagogy | 40 Hours | Total Marks | 100 |
| Credits | 03 | Exam Hours | 03 |
| Course Learning objectives: At the end of the course the student will be able to: <ol style="list-style-type: none"> 1. Overview of formulating research problem and significance of the literature review. 2. Demonstrate the types of research designs with experimentation. 3. Importance of thesis writing skills. 4. Understand the basic concepts of intellectual property and its impact on society. | | | |
| Module -1 | | | |
| Introduction to IoT: Characteristics of IoT, Physical design of IoT, Logical design of IoT, IoT enabling Technologies, IoT levels and deployment templates: IoT level 1, IoT level 2, IoT level 3, IoT level 4, IoT level 5, IoT level 6, Home automation. Text: chapter 1, 2.1-2.2. | | | |
| Module -2 | | | |
| IoT platform design methodology: Introduction, IoT design methodology: purpose & requirements specification, process specification, domain model specification, information model specification, service specification, IoT level specification, Functional view specification, operational view specification, device and component integration, application development. Text: chapter 5 | | | |
| Module -3 | | | |
| IoT physical devices and Endpoints: Basic building blocks of IoT device, Exemplary device: Raspberry pi, About raspberry pi board, Linux on Raspberry pi, Raspberry pi Interfaces, Programming Raspberry pi with python. Text: Chapter 7 | | | |
| Module -4 | | | |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| |
|---|
| IoT physical servers and cloud offerings: Introduction to cloud storage models and communication API's, Web application messaging protocol (WAMP), Xively cloud for IoT, Python web application framework: Django architecture, development with django, Designing a RESTful web API, Amazon web services for IoT, Sky net IoT messaging platform. Text: Chapter 8 |
| Module -5 |
| Case Studies: Home automation: Smart lighting, Cities: Smart parking, Environment: Weather monitoring system, Air pollution monitoring, Agriculture: Smart irrigation. Text: chapter 9.2.1, 9.3.1, 9.4.1, 9.4.3 |
| Text Books: <ol style="list-style-type: none"> 1. Vijay Madiseti and Arshdeep Bahga, "Internet of Things (A Hands-on-Approach)", 1st Edition, VPT, 2014. (ISBN: 978-8173719547) 2. Raj Kamal, "Internet of Things: Architecture and Design Principles", 1st Edition, McGraw Hill Education, 2017. (ISBN: 978-9352605224) |
| Reference books: <ol style="list-style-type: none"> 1. David Hanes, Gonzalo Salgueiro, Patrick Grossetete, Robert Barton, Jerome Henry, "IoT Fundamentals: Networking Technologies, Protocols, and Use Cases for the Internet of Things", 1st Edition, Pearson Education (Cisco Press Indian Reprint). (ISBN: 978-9386873743) 2. Srinivasa K G, "Internet of Things", CENGAGE Learning India, 2017. |

4. Syllabus Timeline

| S/L | Syllabus Timeline | Description |
|----------|--|---|
| 1 | Week 1-2: Introduction to IoT: | Characteristics of IoT, Physical design of IoT, Logical design of IoT, IoT enabling Technologies, IoT levels and deployment templates: IoT level 1, IoT level 2, IoT level 3, IoT level 4, IoT level 5, IoT level 6, Home automation. |
| 2 | Week 3-4: IoT platform design methodology: | Introduction, IoT design methodology: purpose & requirements specification, process specification, domain model specification, information model specification, service specification, IoT level specification, Functional view specification, operational view specification, device and component integration, application development. |
| 3 | Week 5-6: IoT physical devices and Endpoints: | Basic building blocks of IoT device, Exemplary device: Raspberry pi, About raspberry pi board, Linux on Raspberry pi, Raspberry pi Interfaces, Programming Raspberry pi with python. |
| 4 | Week 7-8: IoT physical servers and cloud offerings: | Introduction to cloud storage models and communication API's, Web application messaging protocol (WAMP), Xively cloud for IoT, Python web application framework: Django architecture, development with django, Designing a RESTful web API, Amazon web services for IoT, Sky net IoT messaging platform. |
| 5 | Week 9-10: Case Studies: | Home automation: Smart lighting, Cities: Smart parking, Environment: Weather monitoring system |
| 6 | Week 11-12: Hands-on Experience | Engage in hands-on projects to develop and deploy IoT and WoT solutions, for Air pollution monitoring, Agriculture: Smart irrigation. |

5. Teaching learning process strategies

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| S/L | TLP Strategies | Description |
|-----|---|---|
| 1 | Lecture Method | Utilize various teaching methods within the lecture format to reinforce competencies. |
| 2 | Collaborative Learning | Encourage collaborative learning for improved competency application. |
| 3 | Higher Order Thinking (HOTS) Questions: | Pose HOTS questions to stimulate critical thinking related to each competency. |
| 4 | Problem-Based Learning (PBL) | Implement PBL to enhance analytical skills and practical application of competencies |
| 5 | Multiple Representations | Introduce topics in various representations to reinforce competencies |
| 6 | Real-World Application | Discuss practical applications to connect theoretical concepts with real-world competencies. |
| 7 | Flipped Class Technique | Utilize a flipped class approach, providing materials before class to facilitate deeper understanding of competencies |
| 8 | Programming Assignments | Assign programming tasks to reinforce practical skills associated with competencies. |

6. Assessment Details (both CIE and SEE) Continuous Internal Evaluation:

The minimum CIE marks requirement is 40% of maximum marks in each component.

CIE Split up

| Components | Number | Weightage | Max. Marks | Min. Marks |
|------------------------------------|--------|-----------|------------|------------|
| (i) Internal Assessment-Tests (A) | 2 | 50% | 25 | 10 |
| (ii) Assignments/Quiz/Activity (B) | 2 | 50% | 25 | 10 |
| Total Marks | | | 50 | 20 |

Final CIE Marks =(A) + (B)

Average internal assessment shall be the average of the 2 test marks conducted.

Semester End Examination:

1. Question paper pattern will be ten questions. Each question is set for 20marks. The medium of the question paper shall be English unless otherwise it is mentioned.
2. There shall be 2 question from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have mix of topics under that module if necessary.
3. The students have to answer 5 full questions selecting one full question from each module.
4. Marks scored will be proportionally scaled down to 50 marks'

7. Learning Objectives

| S/L | Learning Objectives | Description |
|-----|-----------------------------|---|
| 1 | Understanding Core Concepts | Describe the fundamental concepts and architecture of IoT, including sensors, actuators, communication protocols, and data processing. Explain the principles of the Web of Things (WoT) and its role in enhancing the interoperability and functionality of IoT devices. |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|----------|---|--|
| 2 | Exploring Web Technologies | Understand the core web protocols (HTTP/HTTPS, WebSockets) and their relevance to IoT communication. Learn how to use and design RESTful APIs for IoT applications and understand common data formats like JSON and XML. |
| 3 | WoT Architecture and Standards Reviews: | Describe the architecture of WoT, including its layers (Scripting, Protocol, and Sensing) and components (Things, Thing Descriptions, Actions). Understand the key specifications and standards defined by organizations like W3C for WoT. |
| 4 | Implementing WoT Scripting | Utilize the WoT Scripting API to create scripts that interact with Thing Descriptions, enabling actions, properties, and events on IoT devices. |
| 5 | Developing IoT Solutions | Design and implement IoT solutions, including selecting appropriate sensors, actuators, and communication methods. Integrate IoT devices with cloud services and other platforms for data storage, analytics, and application development. |
| 6 | Exploring Emerging Trends | Examine emerging trends and advanced applications in WoT and IoT, including AI integration, smart environments, and edge computing. Explore future directions and potential innovations in WoT and IoT technologies. |

8. Course Outcomes (COs) and Mapping with POs/ PSOs

Course Outcomes (COs)

| CO's | DESCRIPTION OF THE OUTCOMES |
|---------------------|---|
| M23BCS505C.1 | Identify different levels of IoT. |
| M23BCS505C.2 | Apply design methodology to develop IoT applications. |
| M23BCS505C.3 | Develop Raspberry pi applications using python. |
| M23BCS505C.4 | Analyze web services for IoT applications. |
| M23BCS505C.5 | Develop web based IoT for real time applications. |

CO-PO-PSO Mapping

| CO's | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO 10 | PO 11 | PO 12 | PSO1 | PSO2 |
|---------------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|--------------|--------------|--------------|-------------|-------------|
| M23BCS505C.1 | 3 | - | - | - | - | - | - | - | - | - | - | - | 3 | 3 |
| M23BCS505C.2 | 3 | - | - | - | - | - | - | - | - | - | - | - | 3 | 3 |
| M23BCS505C.3 | 3 | - | - | - | - | - | - | - | - | - | - | - | 3 | 3 |
| M23BCS505C.4 | 3 | 3 | 3 | - | - | 3 | - | - | - | - | - | 3 | 3 | 3 |
| M23BCS505C.5 | 3 | 3 | 3 | - | - | 3 | - | - | - | - | - | 3 | 3 | 3 |
| M23BCS505C | 3 | 3 | 3 | - | - | 3 | - | - | - | - | - | 3 | 3 | 3 |

9. Assessment Plan

Continuous Internal Evaluation (CIE)

| | CO1 | CO2 | CO3 | CO4 | CO5 | Total |
|--------------|------------|------------|------------|------------|------------|--------------|
| Module 1 | 10 | | | | | |
| Module 2 | | 10 | | | | |
| Module 3 | | | 10 | | | |
| Module 4 | | | | 10 | | |
| Module 5 | | | | | 10 | |
| Total | 10 | 10 | 10 | 10 | 10 | 50 |

Semester End Examination (SEE)

| | CO1 | CO2 | CO3 | CO4 | CO5 | Total |
|--|------------|------------|------------|------------|------------|--------------|
|--|------------|------------|------------|------------|------------|--------------|

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | | | | | |
|--------------|-----------|-----------|-----------|-----------|-----------|------------|
| Module 1 | 20 | | | | | |
| Module 2 | | 20 | | | | |
| Module 3 | | | 20 | | | |
| Module 4 | | | | 20 | | |
| Module 5 | | | | | 20 | |
| Total | 20 | 20 | 20 | 20 | 20 | 100 |

Conditions for SEE Paper Setting:

Each module of SEE question paper should be allocated with questions for 20% of the total SEE marks.

10. Future with this Subject

- **Enhanced Interoperability:** The development and adoption of standardized protocols and data formats will enable seamless integration between diverse devices and platforms. WoT's role in defining common interaction patterns and interfaces will be crucial for achieving interoperability.
- **Smart Cities and Infrastructure:** IoT will enable smart city initiatives by integrating sensors and actuators into infrastructure, improving traffic management, energy consumption, waste management, and public safety.
- **Healthcare and Well-being:** IoT devices will facilitate remote patient monitoring, enabling real-time health tracking and personalized medical care. Wearables and smart medical devices will improve patient outcomes and reduce healthcare costs.
- **Industrial IoT:** IoT will drive advancements in Industry 4.0, with smart factories featuring interconnected machines that optimize production processes, improve quality control, and reduce downtime.
- **AI and Machine Learning Integration:** Combining IoT data with AI and machine learning will enable advanced analytics, predictive insights, and autonomous decision-making across various applications. AI-driven automation in IoT systems will lead to more intelligent and adaptive behaviors, improving efficiency and user experience.
- **Security and Privacy Enhancements:** As IoT devices proliferate, advancements in security will be crucial to protect data and ensure privacy. This includes implementing advanced encryption, authentication, and anomaly detection mechanisms. Future IoT systems will increasingly incorporate privacy considerations from the design phase, offering users more control over their data and how it is use

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|--------------------------------|---|-------------------|
| 5th Semester | Professional Elective-I (PE) ADVANCED JAVA | M23BCS505D |
|--------------------------------|---|-------------------|

1. Prerequisites

| S/L | Proficiency | Prerequisites |
|-----|--|--|
| 1 | Basic Knowledge of Programming: | <ul style="list-style-type: none"> Understanding of programming fundamentals (variables, control structures, loops, functions). |
| 2 | Solid Grasp of Core Java: | <ul style="list-style-type: none"> Mastery of Java basics including syntax, data types, operators, and basic OOP concepts. |
| 3 | Experience with Java Development Environment: | <ul style="list-style-type: none"> Proficiency in using an IDE (like IntelliJ IDEA, Eclipse, or NetBeans). Familiarity with Java development tools (javac, java, jar). |
| 4 | Basic Understanding of Software Development Life Cycle: | <ul style="list-style-type: none"> Knowledge of the phases of software development, from requirement gathering to deployment. |

2. Competencies

| S/L | Competency | KSA Description |
|-----|--|--|
| 1 | Enumerations, Autoboxing, and Annotations | <p>Knowledge</p> <ul style="list-style-type: none"> Understand the fundamentals of Enumerations in Java, including the purpose and usage of values() and valueOf() methods. Recognize that Java Enumerations are class types and that they inherit from Enum. Grasp the concept of Autoboxing and Unboxing in Java, particularly how they occur in expressions and the prevention of errors related to primitive and wrapper types. Understand the basics of Annotations in Java, including retention policies, obtaining annotations at runtime using reflection, and different types of annotations like Marker, Single-member, and Built-in annotations. <p>Skills:</p> <ul style="list-style-type: none"> Ability to implement and utilize enumerations in Java applications. Proficient in applying Autoboxing and Unboxing in code, particularly in complex expressions and boolean/character values. Ability to create and apply custom annotations, specify retention policies, and retrieve annotation data at runtime using reflection. Effectively handle and interpret annotated elements within Java applications. <p>Attitudes:</p> <ul style="list-style-type: none"> Develop a cautious approach to using Autoboxing and Unboxing, understanding the potential for performance issues or unexpected behavior. Foster a mindset that values the importance of code readability and maintainability when using annotations and enumerations. Embrace best practices for using Java annotations to document code and make it more understandable for future developers. |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|---|-----------------|---|
| 2 | Generics | <p>Knowledge:</p> <ul style="list-style-type: none">• Understand the concept of Generics in Java, including the use of generic classes, methods, and interfaces.• Familiarize with bounded types, wildcard arguments, and bounded wildcards in generics.• Recognize the significance of type erasure and how it affects generics.• Comprehend the limitations and restrictions associated with generics, including ambiguity errors and compatibility with legacy code. <p>Skills:</p> <ul style="list-style-type: none">• Ability to define and implement generic classes, methods, and interfaces with one or more type parameters.• Competent in using bounded types and wildcards to create flexible and typesafe code. |
|---|-----------------|---|

| | | |
|---|------------------------|--|
| | | <ul style="list-style-type: none"> Ability to troubleshoot and resolve issues related to generic type erasure and ambiguity errors. Capable of integrating generics into existing legacy code without introducing compatibility issues. <p>Attitudes:</p> <ul style="list-style-type: none"> Develop a careful and thoughtful approach to using generics, prioritizing type safety and code reusability. Value the importance of understanding the underlying mechanics of generics, such as type erasure, to avoid common pitfalls. Embrace a mindset that encourages the use of generics to write cleaner, more maintainable, and robust code. |
| 3 | String Handling | <p>Knowledge:</p> <ul style="list-style-type: none"> Understand the different constructors available for creating String objects and how to determine the length of a string. Familiarize with special string operations, character extraction, comparison, and searching within strings. Grasp the methods available for modifying strings, converting data types using valueOf(), and changing the case of characters. Recognize the differences between String, StringBuffer, and StringBuilder, including their use cases. <p>Skills:</p> <ul style="list-style-type: none"> Ability to perform various string operations, including comparison, extraction, searching, and modification, in Java. Proficient in using String Buffer and String Builder for efficient string manipulation in performance-sensitive applications. Competent in applying data conversion techniques using valueOf() and case conversion methods. <p>Attitudes:</p> <ul style="list-style-type: none"> Develop an appreciation for the importance of efficient string handling, particularly in performance-critical applications. Foster a detail-oriented mindset when working with strings to avoid common errors such as Null Pointer Exception or incorrect string manipulation. Embrace best practices for choosing between String, String Buffer, and String Builder based on the specific needs of the application. |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|---|-----------------|--|
| 4 | Servlets | <p>Knowledge:</p> <ul style="list-style-type: none"> Understand the life cycle of a servlet, including the initialization, service, and destruction phases. Familiarize with the Servlet API, including the javax.servlet and javax.servlet.http packages. Grasp the methods for handling HTTP requests and responses, using cookies, and managing session tracking in servlets. Recognize the basic structure and functionality of Java Server Pages (JSP), including JSP tags, variables, control statements, and session management. <p>Skills:</p> <ul style="list-style-type: none"> Ability to develop, deploy, and manage servlets in a Java web application. Proficient in handling HTTP requests/responses, managing sessions, and using cookies within servlets. Competent in integrating JSPs with servlets for dynamic web content generation. Capable of managing user sessions, parsing request data, and maintaining state across requests using session objects and cookies. <p>Attitudes:</p> <ul style="list-style-type: none"> Develop a user-centric approach to servlet development, ensuring efficient handling of HTTP requests and responsive web applications. |
| | | <ul style="list-style-type: none"> Foster a security-conscious mindset, particularly regarding session management and the use of cookies in web applications. Embrace the principles of good web application design, prioritizing scalability, maintainability, and performance. |
| 5 | JDBC | <p>Knowledge:</p> <ul style="list-style-type: none"> Understand the concept of JDBC and the different types of JDBC drivers. Familiarize with the JDBC packages and the overall process of establishing a database connection using JDBC. Grasp the usage of Statement, Prepared Statement, and Callable Statement objects to execute SQL queries. Recognize the importance of transaction processing, metadata retrieval, handling different data types, and managing exceptions in JDBC. <p>Skills:</p> <ul style="list-style-type: none"> Ability to establish and manage database connections using JDBC in a Java application. Proficient in executing SQL queries, processing Result Set data, and handling transactions within a JDBC context. Competent in retrieving and interpreting metadata, managing data types, and handling exceptions in JDBC code. <p>Attitudes:</p> <ul style="list-style-type: none"> Develop a meticulous approach to database interaction, ensuring efficient and secure data access through JDBC. Foster an awareness of the importance of transaction management in maintaining data integrity and consistency. Embrace best practices for error handling and resource management in JDBC to prevent issues such as resource leaks or SQL injection vulnerabilities. |

3. Syllabus

| ADVANCED JAVA SEMESTER – V | | | |
|-------------------------------|-----------|-----------|----|
| Course Code | 23BCS505D | CIE Marks | 50 |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | | |
|--|------------------|-------------|------------|
| Number of Lecture Hours/Week(L: T: P: S) | (3:0:0:0) | SEE Marks | 50 |
| Total Number of Lecture Hours | 40 Hours | Total Marks | 100 |
| Credits | 03 | Exam Hours | 03 |

Course Objectives:

- 1.Understanding the fundamental concepts of Enumerations and Annotations
- 2.Apply the concepts of Generic classes in Java programs
- 3.Demonstrate the fundamental concepts of String operations
- 4.Design and develop web applications using Java servlets and JSP
- 5.Apply database interaction through Java database Connectivity

Module -1
Enumerations, Autoboxing and Annotations:

Enumerations: Enumeration fundamentals, the values() and valueOf() methods, Java enumerations are class types, enumerations inherits Enum, example, type wrappers,
Autoboxing,: Autoboxing methods, Autoboxing / Unboxing occurs in Expressions, Autoboxing/Unboxing, Boolean and character values, Autoboxing/Unboxing helps prevent errors,
A word of warning Annotations, Annotation basics, specifying retention policy, obtaining annotations at run time by use of reflection, Annotated element interface, Using default values, Marker Annotations, Single member annotations, Built in annotations. **Textbook 1: Chapter 12**

Module -2

String Handling: The String Constructors, String Length, Special String Operations, Character Extraction, String Comparison, Searching Strings, Modifying a String, Data Conversion Using valueOf(), Changing the case of characters within a String, String Buffer, String Builder **Textbook 1: Chapter 15**

Module -3

Applets: Introduction, Types of Applets, Applet Basics, Applet Architecture, An Applet Skeleton, Applet Initialization & Termination, Simple Applet Display Methods, HTML Applet Tag, Passing parameters & Applets. Applet Context and showdocument().

Swings: Introduction. Origins, Features, The MVC Connection, Componenets and Containers, Swing Packages, Simple Swing Application, Creating Swing Applet, Exploring Swings **Textbook 1: Chapter 23, 31, 32**

Module -4

Servelet: The life cycle of a servlet; A simple servlet; the servlet API; The javax.servlet package, Reading servlet parameter; the javax.servlet.http package; Handling HTTP Requests and Responses; using Cookies; Session Tracking, Java Server Pages (JSP); JSP tags, Variables and Objects, Methods, Control statements, Loops, Request String, Parsing other information, User sessions, Cookies, Session Objects

Textbook 1: Chapter 38, Textbook 2: Chapter 11

Module -5

The concept of JDBC; JDBC Driver Types; JDBC packages; A brief overview of the JDBC Process; Database Connection; Associating the JDBC/ODBC Bridge with the Database; Statement Objects; ResultSet; Transaction Processing; Metadata, Data Types; Exceptions.

Textbook 2: Chapter 6

TEXTBOOKS:

1. Herbert Schildt: JAVA the Complete Reference. 9th Edition, Tata McGraw-Hill
2. Jim Keogh, The Complete Reference J2EE, Tata McGraw-Hill

REFERENCE BOOKS:

1. Y. Daniel Liang: Introduction to JAVA Programming, 7th Edition, Pearson Education, 2007
2. Holzner, Steven, Java2 Programming Black Book, McGraw-Hill Education.

4.Syllabus Timeline

| S/L | Syllabus Timeline | Description |
|-----|-------------------|---|
| 1 | Week 1-3: | <p>Week 1: Enumerations</p> <ul style="list-style-type: none"> • Topics: ○ Enumeration fundamentals ○ values() and valueOf() methods ○ Java enumerations as class types ○ Enumerations inheriting Enum ○ Example of using enumerations • Exercises: ○ Practice creating enumerations and using methods like values() and valueOf(). ○ Implement a simple application using enums. <p>Week 2: Autoboxing</p> <ul style="list-style-type: none"> • Topics: ○ Introduction to Autoboxing/Unboxing ○ Autoboxing in expressions ○ Boolean and character values ○ Preventing errors with Autoboxing/Unboxing • Exercises: ○ Create examples showing how Autoboxing/Unboxing works. ○ Discuss scenarios where Autoboxing can prevent errors. <p>Week 3: Annotations</p> <ul style="list-style-type: none"> • Topics: ○ Annotation basics ○ Specifying retention policies ○ Obtaining annotations at runtime using reflection ○ AnnotatedElement interface |
| | | <ul style="list-style-type: none"> ○ Using default values, Marker Annotations, and Single-member annotations ○ Built-in annotations • Exercises: ○ Create custom annotations and retrieve them using reflection. ○ Discuss the use cases for marker annotations. |

| | | |
|---|-----------|--|
| 2 | Week 4-6: | <p>Week 4: Generics: Introduction</p> <ul style="list-style-type: none"> Topics: <ul style="list-style-type: none"> What are Generics? Simple Generics Example Generic Class with Two Type Parameters General Form of a Generic Class Exercises: <ul style="list-style-type: none"> Implement basic generic classes. Discuss the importance of type safety with Generics. <p>Week 5: Generics: Advanced</p> <ul style="list-style-type: none"> Topics: <ul style="list-style-type: none"> Bounded Types and Using Wildcard Arguments Bounded Wildcards Creating a Generic Method Generic Interfaces Exercises: <ul style="list-style-type: none"> Implement methods with bounded types and wildcards. Practice creating generic interfaces. <p>Week 6: Generics: Expert Topics</p> <ul style="list-style-type: none"> Topics: <ul style="list-style-type: none"> Raw types and Legacy code Generic Class Hierarchies Erasure and Ambiguity errors Some Generic Restrictions Exercises: <ul style="list-style-type: none"> Explore the concept of erasure and how it impacts code. Analyze ambiguity errors in code and learn how to resolve them. |
| 3 | Week 7-8: | <p>Week 7: String Handling</p> <ul style="list-style-type: none"> Topics: <ul style="list-style-type: none"> The String Constructors, String Length Special String Operations, Character Extraction String Comparison, Searching Strings, Modifying a String Data Conversion Using valueOf() Changing the case of characters within a String Exercises: <ul style="list-style-type: none"> Practice with String manipulation methods. Write programs that utilize the valueOf() method and string modification techniques. <p>Week 8: String Handling Continued</p> <ul style="list-style-type: none"> Topics: <ul style="list-style-type: none"> StringBuffer, StringBuilder Exercises: <ul style="list-style-type: none"> Compare the performance of String, StringBuffer, and StringBuilder in various scenarios. Implement string manipulations using StringBuilder for efficiency. |
| 4 | Week 9: | <p>Week 9: Servlets</p> <ul style="list-style-type: none"> Topics: <ul style="list-style-type: none"> The life cycle of a servlet; A simple servlet; the servlet API The javax.servlet package, Reading servlet parameters |

| | | |
|----|------------|---|
| | | <ul style="list-style-type: none"> ○ The javax.servlet.http package ○ Handling HTTP Requests and Responses; using Cookies; Session Tracking ○ Java Server Pages (JSP); JSP tags, Variables and Objects, Methods, Control statements, Loops • Exercises: ○ Develop a simple servlet-based application. ○ Implement session tracking and cookie handling. |
| 5 | Week 10: | Week 10: JDBC <ul style="list-style-type: none"> • Topics: ○ Concept of JDBC; JDBC Driver Types; JDBC packages ○ A brief overview of the JDBC Process <ul style="list-style-type: none"> ○ Database Connection ○ Associating the JDBC/ODBC Bridge with the Database ○ Statement Objects; ResultSet; Transaction Processing ○ Metadata, Data Types, Exceptions • Exercises: ○ Connect to a database using JDBC. ○ Execute SQL queries and handle results using JDBC. |
| 10 | Week 11-12 | Review and Project <ul style="list-style-type: none"> • Topics: ○ Review of all topics <ul style="list-style-type: none"> ○ Discussion of key concepts and difficult areas • Project: ○ Develop a final project that integrates multiple topics from the syllabus (e.g., a web application using Servlets, JSP, JDBC with Generics and Annotations). |

5. Teaching-Learning Process Strategies

| S/L | TLP Strategies: | Description |
|-----|--|---|
| 1 | Problem-Based Learning (PBL) | Engage students with real-world problems that require advanced Java knowledge to solve. For instance, tasks could involve optimizing a legacy application or implementing a micro services architecture. It Encourages deep understanding, critical thinking, and application of complex Java concepts in practical situations. |
| 2 | Hands-On Coding Sessions | Incorporate frequent coding exercises where students write, debug, and optimize Java code. Projects could include building scalable web applications, implementing multi-threaded programs, or designing custom data structures. It will enhances coding proficiency and reinforces theoretical knowledge through practical application |
| 3 | Use of Advanced Java Frameworks and Libraries | Introduce and work extensively with popular Java frameworks such as Spring, Hibernate, and Apache Kafka. Teach students how to integrate these tools into their projects. This will helps the students to prepare for industry demands, as these frameworks are widely used in enterprise-level development. |
| 4 | Flipped Classroom Model | Assign reading or video lectures as homework, and use class time for discussions, problem-solving sessions, and hands-on activities. |
| 5 | Project-Based Learning | Assign a capstone project where students must build a complete application from scratch, incorporating advanced Java concepts. |
| 6 | Regular Assessments and Feedback | Conduct quizzes, coding challenges, and peer assessments to regularly gauge student understanding. Provide detailed feedback to guide improvement. |

| | | |
|---|--|--|
| 7 | Guest Lectures and Industry Interaction | Invite industry professionals to give talks on current trends, challenges, and opportunities in Java development. Arrange for students to work on live projects or case studies from the industry. |
|---|--|--|

6. Assessment Details (both CIE and SEE) Continuous Internal Evaluation:

The minimum CIE marks requirement is 40% of maximum marks in each component. **CIE**

Split up

| Components | | Number | Weightage | Max. Marks | Min. Marks |
|--------------------|-------------------------------|--------|-----------|------------|------------|
| (i) | Internal Assessment-Tests (A) | 2 | 50% | 25 | 10 |
| (ii) | Assignments/Quiz/Activity (B) | 2 | 50% | 25 | 10 |
| Total Marks | | | | 50 | 20 |

Final CIE Marks = (A) + (B) Average

internal assessment shall be the average of the 2 test marks conducted.

Semester End Examination:

1. Question paper pattern will be ten questions. Each question is set for 20 marks. The medium of the question paper shall be English unless otherwise it is mentioned.
2. There shall be 2 question from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have mix of topics under that module if necessary.
3. The students have to answer 5 full questions selecting one full question from each module.
4. Marks scored will be proportionally scaled down to 50 marks

7. Learning Objectives

| S/L | Learning Objectives | Description |
|-----|--------------------------------|--|
| 1 | Enumerations | Understand the fundamentals of Java enumerations, including how to use values() and valueOf() methods, and explore their class-like properties. |
| 2 | Autoboxing and Unboxing | Grasp the concepts of autoboxing and unboxing in Java, including how these processes work with expressions and how they help prevent errors. |
| 3 | Annotations | Learn about Java annotations, their basics, and how to specify retention policies and obtain annotations at runtime. |
| 4 | Generics | Understand the use of generics in Java, including creating generic classes, methods, and understanding the restrictions and errors associated with generics. |
| 5 | String Handling | Master string manipulation and handling in Java, including various string operations and conversions. |
| 6 | Servlets | Understand the life cycle and working of Java servlets, including handling HTTP requests and responses. |
| 7 | JDBC | Learn the fundamentals of JDBC, including connecting to databases, executing queries, and handling database results. |

8. Course Outcomes (COs) and Mapping with POs/ PSOs

Course Outcomes (COs)

| Cos | Description |
|---------------------|--|
| M23BCS505D.1 | Understanding the fundamental concepts of Enumerations and Annotations |
| M23BCS505D.2 | Apply the concepts of Generic classes in Java programs |
| M23BCS505D.3 | Demonstrate the concepts of String operations in Java |
| M23BCS505D.4 | Develop web based applications using Java servlets and JSP |
| M23BCS505D.5 | Illustrate database interaction and transaction processing in Java |

CO-PO-PSO Mapping

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

10.Future with this Subject:

1. Career Opportunities

- **Enterprise Application Development:** Advanced Java is extensively used in building enterprise-level applications, especially with frameworks like Spring, Hibernate, and Java EE.
- **Backend Development:** A solid grasp of Advanced Java can lead to roles focusing on backend development, where you manage server-side logic, databases, and integration with front-end components.
- **Mobile App Development (Android):** While Android development has shifted towards Kotlin, a deep knowledge of Java is still valuable for maintaining and upgrading older applications.
- **Big Data Technologies:** Java is a preferred language for working with big data technologies like Apache Hadoop and Apache Kafka.
- **Cloud Computing:** With cloud services like AWS and Google Cloud supporting Java, there are numerous opportunities in cloud-based application development.
- **Microservices Architecture:** Advanced Java skills are critical in building and deploying microservices, which is a growing trend in software architecture.
- **DevOps Roles:** Java knowledge is essential in automating processes, continuous integration, and deployment pipelines.

2. Technological Advancements

- **Java in AI and ML:** Though Python is more popular for AI and ML, Java's ecosystem is growing, with libraries like Deeplearning4j making it relevant for these technologies.

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

- **Internet of Things (IoT):** Java's portability makes it a strong contender for IoT applications, especially in embedded systems.
 - **Blockchain Development:** Java's robustness and security features make it suitable for developing blockchain solutions.
- 3. High Demand and Job Security**
- Companies consistently seek Java developers, ensuring long-term demand and job security.
 - Many legacy systems still run on Java, so there's always a need for skilled professionals to maintain and upgrade these systems.
- 4. Continuous Learning and Growth**
- Mastering Advanced Java often leads to learning more about system architecture, design patterns, and best practices in software development.
 - It also opens doors to learning and integrating other technologies like Python, JavaScript, and various cloud platforms, further enhancing your skill set.
- 5. Entrepreneurship**
- With Advanced Java skills, you could start your own tech venture, offering software solutions, consulting, or creating products that serve a niche market.

| | | |
|--------------------------------|---|------------------|
| 5th Semester | Project Work (PW) MINI PROJECT | M23BCS506 |
|--------------------------------|---|------------------|

1. Prerequisites

| S/L | Proficiency | Prerequisites |
|-----|--|--|
| 1 | Basic Engineering Principles | Fundamental courses in the respective engineering stream |
| 2 | Application of Theoretical Knowledge in Practical Scenarios | Knowledge of the core subjects of the respective stream |
| 3 | Project Design and Planning | Familiarity with design tools and project management techniques. |
| 4 | Multidisciplinary Collaboration | Basic knowledge of related disciplines (e.g., Mechanical students should have a basic understanding of Electronics, etc.). |
| 5 | Technical Communication | Writing technical reports and presenting technical content |

2. Competencies

| S/L | Competency | KSA Description |
|-----|--|--|
| 1 | Problem Identification and Analysis | Knowledge: Understanding the problem domain and relevant engineering concepts. Skill: Ability to analyze and break down complex problems into manageable parts. Attitude: Attention to detail and a systematic approach to problem-solving. |
| 2 | Solution Design and Implementation | Knowledge: Familiarity with design methodologies and tools. Skill: Proficiency in creating prototypes or models using appropriate technologies. Attitude: Creativity and innovation in developing solutions. |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|---|---|---|
| 3 | Interdisciplinary Collaboration | Knowledge: Understanding of basic concepts from other engineering disciplines. Skill: Effective communication and teamwork in a multidisciplinary environment. Attitude: Openness to different perspectives and willingness to collaborate. |
| 4 | Technical Documentation and Presentation | Knowledge: Standards and practices for technical writing and reporting. Skill: Ability to document the project effectively and present it to an audience. Attitude: Confidence and clarity in communication. |
| 5 | Project Management | Knowledge: Understanding of project timelines, resource allocation, and risk management. Skill: Ability to plan, execute, and monitor a project from start to finish. Attitude: Responsibility and accountability in managing project tasks. |

3. Project Timeline

| S/L | Timeline | Description |
|-----|--|--|
| 1 | Week 1-2: Introduction and Problem Definition | Students will define their project problem, scope, and objectives with the guidance of their mentors. |
| 2 | Week 3-4: Research and Feasibility Study | Conduct background research, explore existing solutions, and evaluate the feasibility of different approaches. |
| 3 | Week 5-6: Design and Planning | Develop a detailed project plan, including design specifications, timelines, and resource requirements. |
| 4 | Week 7-8: Prototype Development | Begin building the initial prototype or model, focusing on core functionalities. |
| 5 | Week 9-10: Testing and Refinement | Test the prototype, identify issues, and refine the design to improve performance. |
| 6 | Week 11: Final Implementation and Documentation | Complete the final implementation of the project and prepare detailed documentation. |
| 7 | Week 12: Presentation and Evaluation | Present the project to a committee for evaluation, followed by a Q&A session. |

4. Assessment Details (both CIE and SEE) Continuous Internal Evaluation:

The CIE marks shall be awarded by a committee consisting of the Head of the concerned Department and two senior faculty members of the Department, one of whom shall be the Guide.

The CIE marks awarded for the project work, shall be based on the evaluation of the project work Report, project presentation skill, and question and answer session in the ratio 50:25:25. The marks awarded for the project report shall be the same for all the batch mates.

SEE: There shall be no SEE.

5. Learning Objectives

| S/L | Learning Objectives | Description |
|-----|---|--|
| 1 | Identify and Analyze Engineering Problems | Students will learn to identify real-world engineering problems, analyze them, and propose feasible solutions. |
| 2 | Design and Implement Solution(s) | Students will gain experience in designing and implementing engineering solutions using appropriate tools and methodologies. |
| 3 | Collaborate Effectively in Teams | Students will develop teamwork skills through collaboration with peers from different engineering disciplines. |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|---|-----------------------------------|--|
| 4 | Communicate Technical Information | Students will enhance their ability to document and present technical information effectively. |
|---|-----------------------------------|--|

6. Course Outcomes (COs) and Mapping with POs/ PSOs

Course Outcomes (COs)

| Cos | Description |
|--------------------|---|
| M23BCS506.1 | Apply engineering principles to identify, formulate, and solve real-world problems. |
| M23BCS506.2 | Design and develop prototypes or models that address specific engineering challenges. |
| M23BCS506.3 | Collaborate with team members to complete the project successfully. |
| M23BCS506.4 | Document and present the project effectively, demonstrating clear communication skills. |

CO-PO-PSO Mapping

| COs/Pos | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 | PSO1 | PSO2 |
|--------------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|------|------|
| M23BCS506.1 | 3 | 3 | | | | | | | 3 | | | 3 | 3 | |
| M23BCS506.2 | 3 | 3 | 3 | | | | 3 | | | | 3 | 3 | 3 | |
| M23BCS506.3 | | 3 | 2 | 3 | | 3 | | | | | | 3 | 3 | |
| M23BCS506.4 | | | | 3 | 3 | | | 3 | | 3 | | 3 | 3 | |
| M23BCS506 | 3 | 3 | 3 | 3 | 3 | 3 | 3 | 3 | 3 | 3 | 3 | 3 | 3 | |

6. Future with this Subject

The mini-project course will serve as a foundation for more complex and comprehensive project work in the final year, such as the capstone project. The skills developed here, including problem-solving, design, teamwork, and communication, will be crucial for successful completion of future courses and for professional practice in engineering.

| | | |
|--------------------------|---|------------|
| 5 th Semester | Ability Enhancement Course (AE) RESEARCH METHODOLOGY AND INTELLECTUAL PROPERTY RIGHTS | M23BRMK507 |
|--------------------------|---|------------|

1. Prerequisites

| S/L | Proficiency | Prerequisites |
|-----|--|--|
| 1 | Basic Understanding of Research Concepts | Before delving into the specifics of engineering research and intellectual property rights, students should have a foundational understanding of what research is, its objectives, and its significance, particularly in the context of engineering. |
| 2 | Familiarity with Ethics in Research | Basic knowledge of ethics, including common ethical dilemmas and misconduct in research, is essential. This includes understanding issues related to authorship and ethical considerations in the research process. |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|---|--|--|
| 3 | Literature Review Skills | Students should have prior experience in conducting literature reviews, including familiarity with bibliographic databases such as Web of Science, Google Scholar, and effective search strategies. This will help them in understanding and analyzing existing knowledge in their research field. |
| 4 | Introduction to Intellectual Property Rights | A preliminary understanding of intellectual property rights, including patents, copyrights, trademarks, and industrial designs, would be beneficial. This knowledge should include the role of IP in society and basic IP laws, especially in the Indian context. |
| 5 | Technical Reading and Writing Skills | Competence in reading and comprehending technical documents, including research papers, datasheets, and legal texts, is crucial. Additionally, students should have basic knowledge of how to structure a journal paper and the importance of proper citation and attribution in academic writing. |

2. Competencies

| S/L | Competency | KSA Description |
|-----|--------------------------------------|---|
| 1 | Understand the research process | <p>Knowledge: Types of research (exploratory, descriptive, explanatory, etc.) Research methodologies (qualitative, quantitative, mixed) Research design (experimental, correlation, causal-comparative) Research ethics principles</p> <p>Skills: Identify research problems, Formulate research questions and objectives, Develop research proposals, Conduct literature reviews</p> <p>Attitudes: Curiosity and inquisitiveness, Critical thinking and problem-solving, Intellectual honesty and integrity</p> |
| 2 | Apply ethical principles to research | <p>Knowledge: Ethical guidelines for research Ethical issues in research (plagiarism, data fabrication, etc.) Researcher-participant relationships</p> <p>Skills: Identify potential ethical dilemmas in research Develop ethical protocols for research Obtain informed consent from participants</p> <p>Attitudes: Respect for human subjects, Commitment to research integrity Responsibility for the ethical conduct of research</p> |
| 3 | | <p>Knowledge: Sources of research literature (databases, journals, books) Literature review structure and organization</p> |
| | Conduct effective literature reviews | <p>Critical appraisal of research articles</p> <p>Skills: Search for relevant research literature, Evaluate and synthesize research findings, Organize and present literature review findings</p> <p>Attitudes: Persistence and thoroughness, Open-mindedness to different perspectives, Attention to detail</p> |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|---|---|--|
| 4 | Design research studies | <p>Knowledge: Research designs (experimental, correlational, causal-comparative), Sampling techniques, Data collection methods (surveys, interviews, observations) Skills: Develop research instruments, Select appropriate research design, Develop data collection plans Attitudes: Creativity and innovation, Flexibility and adaptability, Attention to detail</p> |
| 5 | Understand the concept of intellectual property | <p>Knowledge: Definition and types of intellectual property (patents, copyrights, trademarks, trade secrets, industrial designs) Legal framework for intellectual property protection Economic and social importance of intellectual property Skills: Identify intellectual property assets within an organization or project Understand the basics of intellectual property valuation Attitudes: Appreciation for the value of intellectual property, Respect for intellectual property rights, Awareness of intellectual property issues in business and research</p> |

3. Syllabus

| RESEARCH METHODOLOGY & INTELLECTUAL PROPERTY RIGHTS | | | |
|---|-----------------|-------------|-----|
| SEMESTER – V | | | |
| Course Code | M23BRMK507 | CIE Marks | 50 |
| Number of Lecture Hours/Week (L: T: P: S) | (1:2:0:0) | SEE Marks | 50 |
| Total Number of Lecture Hours | 25 hours Theory | Total Marks | 100 |
| Credits | 02 | Exam Hours | 03 |
| <p>Course Objectives:</p> <ol style="list-style-type: none"> 1. To know the meaning of engineering research. 2. To know the procedure of Literature Review and Technical Reading. 3. To know the fundamentals of patent laws and drafting procedure. 4. To gain awareness of the copyright laws and subject matters of copyrights and designs. 5. To interpret and learn the basic principles of design rights. | | | |
| Module -1 | | | |
| <p>Introduction: Meaning of research, objectives of engineering research, and motivation in engineering research, types of engineering research, finding and solving a worthwhile problem. Ethics in engineering research: Ethics in engineering research practice, types of research misconduct, and ethical issues related to authorship.</p> | | | |
| Module -2 | | | |
| <p>Journal Paper document: structure and approach, Literature Review and Technical Reading: New and existing knowledge in research field, analysis and synthesis of prior art. Bibliographic databases like web of science, Google and Google scholar. Effective search: the way forward, introduction to technical reading conceptualizing research, critical and creative reading, taking notes while reading, reading mathematics and algorithms, reading a datasheet. Attributions and Citations: Giving credit wherever due, citations: functions and attributes, impact of title and keywords on citations, knowledge flow through citation, styles for citations, citing datasets,</p> | | | |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

acknowledgments and attributions, what should be acknowledged, acknowledgments in books and dissertations, dedication vs. acknowledgments.

Module -3

Introduction to Intellectual Property (IP): Role of IP in the economic and cultural development of the society, IP governance, IP as a global indicator of innovation, origin of IP, history of IP in India. Major amendments IP laws and acts in India. IP Organizations in India, schemes and programs.

Patents: Conditions for obtaining a patent protection, to patent or not to patent an invention. Rights associated with patents and enforcement of patent rights. Non-patentable matters. Patent infringements and avoiding public disclosure of an invention before patenting.

Process of Patenting: Prior art search, choice of application to be filed, patent application forms, fee structure, types of patent applications. Jurisdiction of filing patent application, publication, pre-grant opposition, examination, and grant of a patent. Validity of patent protection, post-grant opposition, and commercialization of a patent. Need for a patent attorney/agent. Can a worldwide patent be obtained? Do I need first to file a patent in India? Commonly used terms in patenting, National bodies dealing with patent affairs, utility models. Case Studies on Patents. Case study of Curcuma (Turmeric) Patent, Case study of Neem Patent, Case study of Basmati patent.

Module -4

Copyrights and Related Rights: Classes of copyrights, criteria for copyright, ownership of copyright, and copyrights of the author. Copyright infringement a criminal offence and cognizable offence. Fair use doctrine.

Copyrights and internet. Non-copyright work. Copyright registration. Judicial powers of the registrar of copyrights. Fee structure, copyright symbol, validity of copyright, copyright profile of India. Transfer of copyrights to a publisher. Copyrights and the words 'adaptation', 'Indian work', 'joint authorship', 'publish'. Copyright society, copyright board, and copyright enforcement advisory council (CEAC). International copyright agreements, conventions and treaties.

Case Studies of Copyrights cases: Hawkins Cooker Ltd. vs. Magicook Appliances, KSRTC copyright case. Trademarks registration: prior art search, eligibility criteria, who can apply for a trademark. Acts and laws. Designation of trademark symbols. Classification of trademarks. Registration of a trademark is not compulsory. Validity of trademark. Types of trademark registered in India. Trademark registry and process for trademarks registration. Case Studies on Trademarks: Coca-cola company vs. Bisleri international PVT. Ltd, and Yahoo! Inc. vs. Akash Arora & Anr

Module -5

Industrial Designs: Eligibility criteria, Acts and laws to govern industrial designs. Design rights. Enforcement of design rights. Non-protectable industrial designs India. Protection term. Procedure for registration of industrial designs: Prior art search, application for registration, duration of the registration of a design. Importance of design registration. Cancellation of the registered design. Application forms.

Classification of industrial designs. Designs registration trend in India. International treaties.

Famous case of: Apple inc. vs. Samsung electronics co.

Geographical Indications (GI): acts, laws and rules pertaining to GI. Ownership of GI. Rights granted to the holders. Registered GI in India. Identification of registered GI. Classes of GI. Non-registerable GI. Protection of GI. Collective or certification marks. Enforcement of GI rights. Procedure for GI registration documents required for GI registration. GI ecosystem in India.

Case Studies on GI tags: Case Study of Mysore Silk, Darjeeling Tea, Kancheepuram Silk Sarees, case of Goa's Feni

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

2. Intellectual Property Rights by N.K. Acharya Asia Law House 6th Edition. ISBN: 978-93 81849-30-9

4. Syllabus Timeline

| S/L | Syllabus Timeline | Description |
|-----|--|---|
| 1 | Week 1-3: Introduction to Research and Intellectual Property | Week 1: Research fundamentals, types of research, research process, ethics Week 2: Intellectual property overview, patents, trademarks Week 3: Copyrights, industrial designs, geographical indications |
| 2 | Week 4-6: Literature Review, Research Design, and Data Analysis | Week 4: Literature review, bibliographic databases, citation styles Week 5: Research design, sampling, data collection methods Week 6: Data analysis techniques, research ethics case study |
| 3 | Week 7-9: Intellectual Property Law and Enforcement | Week 7: Patent law, patent search, patent drafting Week 8: Trademark law, trademark search, brand management Week 9: Copyright law, fair use, digital copyright |
| 4 | Week 10-12: Intellectual Property and Business | Week 10: Intellectual property valuation, licensing, and commercialization Week 11: Intellectual property strategy and management Week 12: Case studies on intellectual property disputes |
| 5 | Week 13 | Review and Final Exam |

5. Teaching-Learning Process Strategies

| S/L | TLP Strategies: | Description |
|-----|-------------------------|---|
| 1 | Lecture Method | Utilize various teaching methods within the lecture format to reinforce competencies. |
| 2 | Video/Animation | Incorporate visual aids like videos/animations to enhance understanding of research methodology concepts. |
| 3 | Collaborative Learning | Encourage collaborative learning for improved competency application. |
| 4 | Real-World Application | Discuss practical applications to connect theoretical concepts with real-world competencies. |
| 5 | Flipped Class Technique | Utilize a flipped class approach, providing materials before class to facilitate deeper understanding of competencies |

6. Assessment Details (both CIE and SEE) Continuous Internal Evaluation:

The minimum CIE marks requirement is 40% of maximum marks in each component. CIE Split up

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| Components | | Number | Weightage | Max. Marks | Min. Marks |
|-------------|-------------------------------|--------|-----------|------------|------------|
| (i) | Internal Assessment-Tests (A) | 2 | 50% | 25 | 10 |
| (ii) | Assignments/Quiz/Activity (B) | 2 | 50% | 25 | 10 |
| Total Marks | | | | 50 | 20 |

Final CIE Marks =(A) + (B)

Average internal assessment shall be the average of the 2 test marks conducted.

Semester End Examination:

1. Question paper pattern will be ten questions. Each question is set for 20 marks. The medium of the question paper shall be English unless otherwise it is mentioned.
2. There shall be 2 questions from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have mix of topics under that module if necessary.
3. The students have to answer 5 full questions selecting one full question from each module.
4. Marks scored will be proportionally scaled down to 50 marks

7. Learning Objectives

| S/L | Learning Objectives | Description |
|-----|---|---|
| 1 | Understand the fundamental principles of research methodology. | Research objectives should be clear and based on curiosity. A systematic approach, inspired by the scientific method, ensures transparency and replication. The goal should be to add something new or distinctive, exploring and questioning existing knowledge. |
| 2 | Apply ethical considerations in engineering research. | Students as researchers must obtain informed consent from study participants, ensure voluntary participation, protect participant identities and confidentiality, prevent harm to participants, and submit proposals to an institutional review board (IRB) for ethical approval before data collection, ensuring compliance with research objectives and balancing safety with research objectives. |
| 3 | Conduct effective literature reviews and technical reading. | Students will learn to conduct a literature review, start by searching for relevant sources, evaluating and selecting them based on quality and relevance, identifying themes, debates, and gaps, outlining your findings logically, and writing your review. Analyze, critique, and compare different sources, highlighting how your research contributes to the ongoing scholarly conversation. |
| 4 | Identify and utilize proper attribution and citation styles. | Different disciplines use specific citation styles, such as APA, MLA, or Chicago. In-text citations include author's name and publication year. Reference lists or bibliographies should be compiled at the end of the work. Book citations include author(s), title, publisher, and publication year. Journal article citations include author(s), title, journal name, volume, issue, and publication year. |
| 5 | Gain knowledge of different forms of intellectual property (IP) protection. | Patents, copyrights, and trade secrets are legal rights granted by government agencies to inventors, protecting novel processes, machines, and compositions of matter. Trademarks safeguard brand names and symbols, while trade secrets provide confidential information for competitive advantage. |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|---|--|--|
| 6 | Understand the patenting process and its importance. Recognize the significance of copyrights, trademarks, industrial designs, and geographical indications. | A patent is a legal shield granted by a government authority to inventors, providing exclusive rights to an original invention. There are three main types: utility patents, plant patents, design patents, trademarks, copyrights, industrial designs, and geographical indications. Utility patents cover inventions like machines, software, and chemical formulations, while plant patents safeguard unique plant characteristics. Design patents protect product ornamental appearance. Trademarks help build brand identity and prevent confusion. |
| 7 | Identify relevant IP organizations and government schemes in India. | The Indian government initiatives include CIPAM, IPRs in School Syllabus, Patent Facilitation Program, National IPR Policy, Technology and Innovation Support Centers, Start-up India, Make in India, National IP Awards, Patent Prosecution Highway, border measures, and support for startups and MSMEs. |

8. Course Outcomes (COs) and Mapping with POs/ PSOs

Course Outcomes (COs)

| COs | Description |
|--------------|--|
| M23BRMK507.1 | Interpret the ethical issues in engineering research, including identifying types of research misconduct and evaluating the impact of ethical practices on research outcomes. |
| M23BRMK507.2 | Analyze literature from diverse bibliographic databases, critically appraise existing research, and synthesize prior art to develop a comprehensive understanding of a chosen research topic. |
| M23BRMK507.3 | Apply appropriate citation styles and techniques, ensuring proper attributions in academic writing to maintain ethical standards and enhance the credibility of research work. |
| M23BRMK507.4 | Apply the principles of intellectual property rights, including patents, copyrights, and trademarks, to assess the eligibility of an invention or creative work for protection, and navigate the processes for registration and enforcement. |
| M23BRMK507.5 | Analyze the role of intellectual property in economic and cultural development, and explain the historical evolution and contemporary relevance of IP laws and acts, particularly in the Indian context. |

CO-PO-PSO Mapping

| COs/POs | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 | PSO1 | PSO2 |

10. Future with this Subject:

1. Advanced Research Opportunities:

- **PhD and Postdoctoral Research:** The course equips mechanical engineers with essential research skills, making them strong candidates for advanced studies. This can lead to specialization in emerging fields like computational mechanics, renewable energy systems, and smart manufacturing.
- **Interdisciplinary Research:** Understanding research methodology enables mechanical engineers to collaborate on interdisciplinary projects, combining mechanical engineering with fields like materials science, robotics, and artificial intelligence.

2. Innovation and Product Development:

- **Patentable Innovations:** Knowledge of intellectual property rights allows engineers to protect their innovations, leading to the development of patentable technologies. This is particularly relevant in industries like automotive, aerospace, and manufacturing, where innovation is key to competitiveness.
- **Start-ups and Entrepreneurship:** The course provides a foundation for engineers to start their own ventures, focusing on innovative mechanical products or services. Understanding IP can help secure funding and protect their business ideas.

3. Career in Research and Development (R&D):

- **Industry R&D Roles:** Mechanical engineers with strong research methodology skills are valuable assets in R&D departments. They can lead projects that require rigorous research, data analysis, and the development of new technologies or processes.

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

- Government and Private Research Organizations: Opportunities in organizations like CSIR (Council of Scientific & Industrial Research), DRDO (Defense Research and Development Organization), or private research labs, where engineers can contribute to national and international projects.

4. Consulting and Advisory Roles:

- IP Consulting: Engineers with expertise in intellectual property rights can work as consultants, advising companies on patenting strategies, IP management, and innovation protection.

- Research Methodology Expert: Mechanical engineers can also serve as advisors or consultants for research projects, helping organizations design and implement robust research methodologies.

5. Teaching and Academia:

- Faculty Positions: With advanced knowledge in research methodology and IP, mechanical engineers can pursue teaching careers in universities or technical institutes, contributing to the next generation of engineers.
- Curriculum Development: They can also be involved in developing or enhancing engineering curricula, incorporating modern research methods and IP considerations into mechanical engineering programs.

6. Contribution to Sustainable Development:

- Innovations for Sustainability: Mechanical engineers can apply their research skills to develop sustainable technologies, focusing on renewable energy, energy efficiency, and reducing the environmental impact of mechanical systems.
- Policy Making: With an understanding of the societal impact of engineering solutions, they can contribute to policy-making processes, particularly in areas related to environmental sustainability and technology regulation.

This course lays the foundation for mechanical engineers to not only excel in their current roles but also to explore new horizons in research, innovation, and entrepreneurship, making a significant impact on their field and society.

|-------------------------------|---|-------------------|
| 5thSemester | Basic Science (BS) ENVIRONMENTAL STUDIES | M23BESK508 |
|-------------------------------|---|-------------------|

1. Prerequisites

| S/L | Proficiency | Prerequisites |
|----------|--|--|
| 1 | Understanding Ecosystems | Basic knowledge of biology, environmental science, and ecological systems. |
| 2 | Comprehending Natural Resource Management | Familiarity with energy systems, environmental management, and global sustainability practices. |
| 3 | Knowledge of Environmental Pollution | Understanding of chemical processes, industrial impacts, and environmental science fundamentals. |
| 4 | Addressing Global Environmental Concerns | Knowledge of climate science, environmental policies, and global ecological challenges. |
| 5 | Awareness of Environmental Legislation | Familiarity with national and international environmental laws, policies, and regulations. |

2. Competencies

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| S/L | Competency | KSA Description |
|-----|---------------------------------------|--|
| 1 | Ecosystem Analysis | Knowledge: Ecosystem structure, sustainability principles, SDGs. Skills: Identifying ecosystem components, and understanding sustainability targets. Attitudes: Appreciating biodiversity, and promoting sustainability. |
| 2 | Resource Management | Knowledge: Renewable and non-renewable energy systems, sustainable practices. Skills: Analyzing case studies, and evaluating energy systems. Attitudes: Supporting sustainable resource use, and critical thinking on global issues. |
| 3 | Pollution Mitigation | Knowledge: Pollution sources, impacts, and legislation. Skills: Assessing pollution control measures, and implementing waste management strategies. Attitudes: Advocating for environmental protection, and responsible waste disposal. |
| 4 | Global Environmental Awareness | Knowledge: Climate change, groundwater depletion, global policies. Skills: Investigating global environmental challenges, and proposing solutions. Attitudes: Engaging in global environmental discussions, and supporting international efforts. |
| 5 | Environmental Legal Framework | Knowledge: Key environmental acts and regulations. Skills: Applying legal knowledge to environmental issues, and understanding EIA processes. Attitudes: Valuing legal frameworks, and ensuring compliance with environmental laws. |

3. Syllabus

| ENVIRONMENTAL STUDIES SEMESTER – V | | | |
|--|-------------------|-------------|------------|
| Course Code | M23BESK508 | CIE Marks | 50 |
| Number of Lecture Hours/Week(L: T: P: S) | (2:0:0:0) | SEE Marks | 50 |
| Total Number of Lecture Hours | 25 Hours | Total Marks | 100 |
| Credits | 02 | Exam Hours | 02 |
| Course Objectives: Students will be able | | | |
| 1. Understand the structure and function of various ecosystems like forests, deserts, wetlands, rivers, oceans, and lakes. | | | |
| 2. Explore natural resource management techniques, including energy systems and disaster management, and assess their sustainability. | | | |
| 3. Examine environmental pollution sources and impacts, and learn corrective and preventive measures alongside waste management strategies. | | | |
| 4. Investigate global environmental issues such as climate change and groundwater depletion, and the role of environmental legislation in addressing these issues. | | | |
| Module -1 | | | |
| ECOSYSTEMS (STRUCTURE AND FUNCTION): Forest, Desert, Wetlands, River, Oceanic and Lake. Sustainability: 17 SDGs- History, targets, implementation, Capacity Development | | | |
| Module -2 | | | |

| |
|---|
| NATURAL RESOURCE MANAGEMENT Advances in Energy Systems (Merits, Demerits, Global Status and Applications): Hydrogen, Solar, OTEC, Tidal and Wind. Natural Resource Management (Concept and case-studies): Disaster Management, Sustainable Mining - case studies and Carbon Trading. |
| Module -3 |
| ENVIRONMENTAL POLLUTION & WASTE MANAGEMENT Environmental Pollution (Sources, Impacts, Corrective and Preventive measures, Relevant Environmental Acts, Case-studies): Surface and Ground Water Pollution; Noise pollution; Soil Pollution and Air Pollution. Waste Management: Bio-medical Wastes; Solid waste; Hazardous wastes; E-wastes; Industrial and Municipal Sludge. |
| Module -4 |
| Global Environmental Concerns (Concept, policies and case-studies): Ground water depletion/recharging, Climate Change; Acid Rain; Ozone Depletion; Radon and Fluoride problem in drinking water; Resettlement and rehabilitation of people, Environmental Toxicology. |
| Module -5 |
| ENVIRONMENTAL LEGISLATION : Water Act 1974, Air Act 1981, Environmental Protection Act 1984, Solid Waste Management Rules-2016, E- Waste management Rule - 2022, Biomedical Waste management-2016. Environmental Impact Assessment |
| TEXTBOOKS: 1. Environmental studies, Benny Joseph, Tata Mcgraw-Hill 2nd edition 2012 \ 2. Environmental studies, S M Prakash, pristine publishing house, Mangalore 3rd edition -2018 |
| REFERENCE BOOKS: 1. Benny Joseph, Environmental studies, Tata Mcgraw-Hill 2nd edition 2009 2. M.Ayi Reddy Textbook of environmental science and Technology, BS publications 2007 3. Dr. B.S Chauhan, Environmental studies, university of science press 1st edition |

4. Syllabus Timeline

| S/L | Syllabus Timeline | Description |
|-----|-------------------|--|
| 1 | Week 1-2 | Introduction to ecosystems, exploring their structure and function with a focus on sustainability and SDGs. |
| 2 | Week 3-4 | Understanding natural resource management, advances in energy systems, and disaster management through case studies. |
| 3 | Week 5-6 | Examination of environmental pollution sources, impacts, and preventive measures, along with waste management strategies. |
| 4 | Week 7-8 | Exploration of global environmental concerns such as climate change, groundwater depletion, and related policies. |
| 5 | Week 9-10 | Study of environmental legislation, including key environmental acts and the process of Environmental Impact Assessment (EIA). |
| 6 | Week 11-12 | Revision |

5. Teaching-Learning Process Strategies

| S/L | TLP Strategies: | Description |
|-----|-----------------------|---|
| 1 | Interactive Lectures: | Utilize chalk and talk along with PowerPoint presentations and animations to engage students in theoretical and practical understanding |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|---|----------------------|--|
| 2 | Case Study Analysis: | Present real-world scenarios and case studies to help students apply theoretical knowledge to practical situations, particularly in natural resource management and pollution control. |
|---|----------------------|--|

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|---|---------------------------|--|
| 3 | Fieldwork and Site Visits | Encourage hands-on learning through field visits to environmental labs, green buildings, and treatment plants, followed by documentation and analysis of the processes observed. |
| 4 | Collaborative Learning | Promote group projects and discussions, enabling students to collaborate and learn from each other, particularly in global environmental concerns and energy systems. |

6. Assessment Details (both CIE and SEE)

Assessment Details (both CIE and SEE)

The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 40% of the maximum marks (20 marks out of 50) and for the SEE minimum passing mark is 35% of the maximum marks (18 out of 50 marks). The student is declared as a pass in the course if he/she secures a minimum of 40% (40 marks out of 100) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together.

Continuous internal Examination (CIE)

1. For the Assignment component of the CIE, there are 25 marks and for the Internal Assessment Test component, there are 25 marks.
2. The first test will be administered after 40-50% of the syllabus has been covered, and the second test will be administered after 85-90% of the syllabus has been covered
3. Any two assignment methods mentioned in the regulations, if an assignment is project-based then only one assignment for the course shall be planned. The teacher should not conduct two assignments at the end of the semester if two assignments are planned.
4. For the course, CIE marks will be based on a scaled-down sum of two tests and other methods of assessment.

The sum of two tests, two assignments, will be out of 100 marks and will be scaled down to 50 marks.

Internal Assessment Test question paper is designed to attain the different levels of Bloom's taxonomy as per the outcome defined for the course.

Semester End Examinations (SEE)

SEE paper shall be set for **50 questions**, each of the 01 mark. **The pattern of the question paper is MCQ (multiple choice questions). The time allotted for SEE is 01 hour.** The student has to secure a minimum of 35% of the maximum marks meant for SEE.

7. Learning Objectives

| S/L | Learning Objectives | Description |
|-----|---|---|
| 1 | Analyze the structure and function of various ecosystems. | Students will learn about the characteristics and interactions within ecosystems such as forests, deserts, wetlands, rivers, oceans, and lakes. |
| 2 | Evaluate natural resource management techniques. | Students will assess the merits and demerits of various energy systems and learn sustainable management practices through case studies. |
| 3 | Investigate environmental pollution and waste management. | Students will understand the sources and impacts of environmental pollution, along with strategies for pollution control and waste management. |

| | | |
|---|---|--|
| | legislation and its application. | 2023 Scheme – 5 th to 6 th Sem Competency Based Syllabi for B.E CSE |
| 4 | Explore global environmental concerns and policies. | Students will study global issues like climate change and groundwater depletion, and examine the role of environmental legislation in addressing these challenges. |
| 5 | Understand environmental | Students will gain insights into key environmental acts and regulations, and learn how to apply them in real-world scenarios. |

8. Course Outcomes (COs) and Mapping with POs/ PSOs

Course Outcomes (COs)

| Cos | Description |
|---------------------|--|
| M23BESK508.1 | Analyze the structure and functions of various ecosystems and evaluate their sustainability |
| M23BESK508.2 | Apply knowledge of natural resource management and advances in energy systems to assess their global impacts |
| M23BESK508.3 | Investigate environmental pollution sources and apply waste management strategies in real-world scenarios |
| M23BESK508.4 | Critically analyze global environmental concerns and assess the effectiveness of environmental policies |
| M23BESK508.5 | Demonstrate an understanding of environmental legislation and apply it to ensure sustainable practices |

10. Future with this Subject

This course provides a foundational understanding of environmental science that is crucial for advanced studies in environmental engineering, sustainability, and policy-making. It equips students with the knowledge and skills to tackle global environmental challenges and supports interdisciplinary research, making it a valuable asset for careers in environmental management, consulting, and advocacy. The insights gained from this course will also be beneficial in professional roles requiring compliance with environmental legislation and sustainable development practices.

| Activities Report Evaluation by College NSS Officer at the end of every semester(3 rd to 6 th semester) | | | |
| Course objectives: National Service Scheme (NSS) will enable students to: <ol style="list-style-type: none"> 1. Understand the community in general in which they work. 2. Identify the needs and problems of the community and involve them in problem-solving. 3. Develop among themselves a sense of social & civic responsibility & utilize their knowledge in finding practical solutions to individual and community problems. 4. Develop competence required for group-living and sharing of responsibilities & gain skills in mobilizing community participation to acquire leadership qualities and democratic attitudes. 5. Develop capacity to meet emergencies and natural disasters & practice national integration and social harmony in general. | | | |
| General Instructions-Pedagogy: These are sample Strategies, which teachers can use to accelerate the attainment of the various course outcomes. <ol style="list-style-type: none"> 1. In addition to the traditional lecture method, different types of innovative teaching methods may be adopted so that the activities will develop students' theoretical and applied social and cultural skills. 2. State the need for NSS activities and its present relevance in the society and Provide real-life examples. 3. Support and guide the students for self-planned activities. 4. You will also be responsible for assigning homework, grading assignments and quizzes, and documenting students' progress in real activities in the field. 5. Encourage the students for group work to improve their creative and analytical skills. | | | |

Contents :

1. Organic farming, Indian Agriculture (Past, Present and Future)Connectivity for marketing.
2. Waste management– Public, Private and Govt organization, 5R's.
3. Setting of the information imparting club for women leading to contribution in social and economic issues.
4. Water conservation techniques–Role of different stakeholders–Implementation.
5. Preparing an action able business proposal for enhancing the village in come and approach for implementation.
6. Helping local schools to achieve good results and enhance their enrolment in Higher/technical/vocational education.
7. Developing Sustainable Water management system for rural areas and implementation approaches.
8. Contribution to any national level initiative of Government of India. For eg. Digital India, Skill India, Swatch Bharat, Atmanirbhar Bharath, Make in India, Mudra scheme, Skill development programs etc.
9. Spreading public awareness under rural out reach programs.(minimum 5 programs).
10. Social connect and responsibilities.
11. Plantation and adoption of plants. Know your plants.
12. Organize National integration and social harmony events/workshops/seminars.(Minimum 02 programs).
13. Govt.school Rejuvenation and helping them to achieve good infrastructure.

NOTE:

Student/s in individual or in a group should select any one activity in the beginning of each semester till end of that respective semester for successful completion as per the instructions of NSS officer with the consent of HOD of the department.

At the end of every semester, activity report should be submitted for evaluation.

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

Distribution of Activities – Semester wise from 3rd to 6th semester.

| Sem | Topics / Activities to be Covered |
|---------------------------------------|--|
| 3rdSem for 25 Marks | <ol style="list-style-type: none"> 1. Organic farming, Indian Agriculture (Past, Present, and Future) Connectivity for marketing. 2. Waste management– Public, Private and Govt organization, 5R's. 3. Setting of the information imparting club for women leading to contribution in social and economic issues. |
| 4thSem for 25 Marks | <ol style="list-style-type: none"> 1. Water conservation techniques– Role of different stakeholders–Implementation. 2. Preparing an actionable business proposal for enhancing the village income and approach for implementation. 3. Helping local schools to achieve good results and enhance their enrolment in Higher/technical/ vocational education. |
| 5thSem for 25 Marks | <ol style="list-style-type: none"> 1. Developing Sustainable Water management systems for rural areas and implementation approaches. 2. Contribution to any national-level initiative of the Government of India. For eg. Digital India, Skill India, Swachh Bharat, Atmanirbhar Bharath, Make in India, Mudra scheme, Skill development programs etc. 3. Spreading public awareness under rural outreach programs.(minimum 5 programs). 4. Social connect and responsibilities. |
| 6thSem for 25 Marks | <ol style="list-style-type: none"> 1. Plantation and adoption of plants. Know your plants. 2. Organize National integration and social harmony events/workshops/seminars.(Minimum 02 programs). 3. Govt.school Rejuvenation and helping them to achieve good infrastructure. |

Course outcomes (Course Skill Set):

At the end of the course, the student will be able to:

| Cos | Description |
|---------------------|---|
| M23BNSK509.1 | Understand the importance of his/her responsibilities towards society. |
| M23BNSK509.2 | Analyse the environmental and societal problems/issues and will be able to design solutions for the same. |
| M23BNSK509.3 | Evaluate the existing system and to propose practical solutions for the same for sustainable development. |
| M23BNSK509.4 | Implement government or self-driven projects effectively in the field. |
| M23BNSK509.5 | Develop capacity to meet emergencies and natural disasters & practice national integration and social harmony in general. |

It may differ depending on local resources available for the study as well as environment and climatic differences, location, and time of execution.

Plan of Action ((Execution of Activities For Each Semester)

| Sl. No | Practice Session Description |
|---|---|
| 1. | Lecture session by NSS Officer |
| 2. | Students Presentation on Topics |
| 3. | Presentation-1, Selection of topic, PHASE-1 |
| 4. | Commencement of activity and its progress -PHASE-2 |
| 5. | Execution of Activity |
| 6. | Execution of Activity |
| 7. | Execution of Activity |
| 8. | Execution of Activity |
| 9. | Execution of Activity |
| 10. | Case-study-based Assessment, Individual performance |
| 11. | Sector wise study and its consolidation |
| 12. | Video-based seminar for 10-minutes by each student At the end of the semester with a Report. |
| | <ul style="list-style-type: none"> In every semester from 3rd semester to 6th semester, Each student should do activities according to the scheme and syllabus. At the end of every semester student performance has to be evaluated by the NSS officer for the assigned activity progress and its completion. At last in 6th semester consolidated report of all activities from 3rd to 6th semester, compiled report should be submitted as per the instructions. |
| Assessment Details: | |
| Weightage | CIE – 100% |
| Presentation-1 Selection of topic, PHASE-1 | 10 Marks |
| | <ul style="list-style-type: none"> Implementation strategies of the project(NSS work). |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|--|-----------------|--|
| Commencement of activity and its progress - PHASE-2 | 10 Marks | <ul style="list-style-type: none"> The last Report should be signed by the NSS Officer, the HOD, and the principal. At-last Report should be evaluated by the NSS officer of the institute. Finally, the consolidated marks sheet should be sent to the university and made available at the LIC visit. |
| Case Study-based Assessment Individual Performance with Report | 10 Marks | |
| Sector-wise study & its consolidation | 10 Marks | |
| Video based seminar for 10 minutes by each student At the end of semester with Report. Activities. | 10 Marks | |
| Total marks for the course in each semester | 50 Marks | |
| Marks scored for 50 by the students should be Scale down to 25 marks In each semester for CIE entry in the VTU portal. | | |
| 25 marks CIE entry will be entered in University IA marks portal at the end of each semester 3rd to 6th sem, Report and assessment copy should be made available in the department semester wise | | |
| Students should present the progress of the activities as per the schedule in the prescribed practical session in the field. There should be positive progress in the vertical order for the benefit of society in general. | | |
| Suggested Learning Resources: Books: <ol style="list-style-type: none"> 1. NSS Course Manual, Published by NSS Cell, VTU Belagavi. 2. Government of Karnataka, NSS cell, activities reports and manual. 3. Government of India, NSS cell, Activities reports and manual. | | |

| Course objectives: <ol style="list-style-type: none"> 1. To enable the student to have good Health. 2. To practice mental hygiene. 3. To possess emotional stability. 4. To integrate moral values. 5. To attain a higher level of consciousness. | | | |

The Health Benefits of Yoga

The benefits of various yoga techniques have been supposed to improve

- body flexibility,
- performance,
- stress reduction,
- attainment of inner peace, and
- self-realization.

The system has been advocated as a complementary treatment to aid the healing of several ailments such as

- coronary heart disease,
- depression,
- anxiety disorders,
- asthma, and
- extensive rehabilitation for disorders including musculoskeletal problems and traumatic brain injury.

The system has also been suggested as a behavioral therapy for smoking cessation and substance abuse (including alcohol abuse).

If you practice yoga, you may receive these physical, mental, and spiritual benefits:

- Physical
 1. Improved body flexibility and balance
 2. Improved cardiovascular endurance (stronger heart)
 3. Improved digestion
 4. Improved abdominal strength
 5. Enhanced overall muscular strength
 6. Relaxation of muscular strains
 7. Weight control
 8. Increased energy levels
 9. Enhanced immune system
- Mental

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

1. Relief of stress resulting from the control of emotions
2. Prevention and relief from stress-related disorders
3. Intellectual enhancement, leading to improved decision-making skills
- Spiritual
 1. Life with meaning, purpose, and direction
 2. Inner peace and tranquility
 3. Contentment

Semester V

- Patanjali's Ashtanga Yoga its need and importance.
- Ashtanga Yoga
 1. Asana
 2. Pranayama
 3. Pratyahara
- Asana its meaning by name, technique, precautionary measures and benefits of each asana
- Different types of Asanas
 - a. Sitting 1. Ardha Ushtrasana 2. Vakrasana 3. Yogamudra in Padmasana
 - b. Standing 1. UrdhvaHastothanasana 2. Hastapadasana 3. ParivrittaTrikonasana 4. Utkatasana
 - c. Prone line 1. Padangushtha Dhanurasana 2. Poorna Bhujangasana / Rajakapotasana
 - d. Supine line 1. Sarvangasana 2. Chakraasana 3. Navasana/Noukasana 4. Pavanamuktasana
- Revision of practice 60 strokes/min 3 rounds
- Meaning by name, technique, precautionary measures and benefits of each Pranayama 1. Ujjayi 2. Sheetal 3. Shektari

Course outcomes (Course Skill Set):

At the end of the course, the student will be able to:

| COs | Description |
|---------------------|--|
| M23BYOK509.1 | Understand the meaning, aim and objectives of Yoga. |
| M23BYOK509.2 | Perform Suryanamaskar and able to Teach its benefits. |
| M23BYOK509.3 | Understand and teach different Asanas by name, its importance, methods and benefits. |
| M23BYOK509.4 | Instruct Kapalabhati and its need and importance. |
| M23BYOK509.5 | Teach different types of Pranayama by its name, precautions, procedure and uses |
| M23BYOK509.6 | Coach different types of Kriyas, method to follow and usefulness. |

Assessment Details (both CIE and SEE)

- Students will be assessed with internal test by a. Multiple choice questions b. Descriptive type questions (Two internal assessment tests with 25 marks/test)
- Final test shall be conducted for whole syllabus for 50 marks.
- Continuous Internal Evaluation shall be for 100 marks (including IA test)

Suggested Learning Resources: Books:

1. Yogapravesha in Kannada by Ajitkumar
2. Light on Yoga by BKS Iyengar
3. Teaching Methods for Yogic practices by Dr. M L Gharote & Dr. S K Ganguly
4. Yoga Instructor Course hand book published by SVYASA University, Bengaluru
5. Yoga for Children –step by step – by Yamini Muthanna

|--|--|-----------|
| 2023 Scheme – 5 th to 6 th Sem. Competency Based Syllabi for B.E CSE 6 th Semester | Integrated Professional Course (IPC) Fall Stack Development | M23BCS601 |
| Web links and Video Lectures (e-Resources): Refer links 6. https://youtu.be/KB-TYlgd1wE 7. https://youtu.be/aa-TG0Wg1Ls | | |

1. Prerequisites

| S/L | Proficiency | Prerequisites |
|-----|------------------------------|--|
| 1 | Basic Programming Knowledge | Python: Since Django is a Python-based framework, strong proficiency in Python is essential. You should be comfortable with Python syntax, data types, loops, functions, and object-oriented programming (OOP). |
| 2 | Front-End Development Skills | HTML/CSS: Proficiency in HTML and CSS is necessary to create the structure and style of web pages. You should understand the basics of responsive design. JavaScript: Knowledge of JavaScript is important for adding interactivity to web pages. Understanding the Document Object Model (DOM) and how to manipulate it using JavaScript is crucial. Front-End Frameworks/Libraries: Familiarity with front-end frameworks like Bootstrap for styling, or JavaScript libraries like jQuery, can be beneficial. Learning a modern front-end framework like React can also be helpful for creating dynamic user interfaces. |
| 3 | Django-Specific Knowledge | Django Framework: Proficiency in Django is key. This includes understanding Django's MVC (Model-View-Controller) architecture, working with models, views, and templates, and using Django's ORM (Object-Relational Mapping) to interact with databases. |
| 4 | Database Knowledge | SQL Databases: Understanding of SQL and how to work with databases like PostgreSQL, MySQL, or SQLite, which are commonly used with Django. You should be comfortable with designing database schemas, writing queries, and optimizing database performance. Django ORM: Proficiency in Django's ORM to perform database operations in a Pythonic way without writing raw SQL. |
| 5 | Security Practices | Django Security Features: Familiarity with Django's built-in security features, such as CSRF protection, SQL injection protection, and handling authentication securely. Web Security Basics: Understanding of HTTPS, secure password storage, user authentication and authorization, and common web vulnerabilities. |

2. Competencies

| S/L | Competency | KSA Description |
|-----|------------|-----------------|
|-----|------------|-----------------|

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|---|------------------------------|--|
| 1 | Web Technologies | Knowledge: Frontend: HTML5, CSS3, JavaScript, frameworks like React.js, Angular, or Vue.js. Backend: Server-side languages like Node.js, Java, or Python, and frameworks (Express.js, Django). Skills: Develop responsive web applications that deliver a seamless user experience. Attitudes: Build interactive and dynamic user interfaces as well as robust serverside applications. |
| 2 | Database Management | Knowledge: Familiarity with relational databases (MySQL, PostgreSQL) and NoSQL databases (MongoDB) Skills: Write complex queries and optimize database performance. Attitudes: Design, implement, and manage databases efficiently. |
| 3 | API Development | Knowledge: Knowledge of RESTful APIs and GraphQL. Skills: Test and document APIs for usability. Attitudes: Design and implement APIs that facilitate communication between frontend and backend. |
| 4 | Responsive Web Design | Knowledge: Familiarity with responsive design principles and frameworks (e.g., Bootstrap). Skills: Use CSS techniques to ensure design consistency across devices. Attitudes: Create interfaces that adapt to various screen sizes. |
| 5 | Problem-Solving | Knowledge: Techniques for troubleshooting and debugging. Skills: Implement solutions efficiently and evaluate their effectiveness Attitudes: Analyze complex issues and propose effective solutions. |
| 6 | Team Collaboration | Knowledge: Principles of teamwork and collaboration in software development. Skills: Communicate clearly and constructively in team settings. Attitudes: Work effectively in diverse teams and contribute to group objectives. |
| 7 | Project Development | Knowledge: Understanding the lifecycle of software development from requirements to deployment. Skills: Deliver end-to-end solutions that meet user needs. Attitudes: Integrate frontend and backend components to create cohesive applications. |

3. Syllabus

| FULL STACK DEVELOPMENT SEMESTER – VI | | | |
|--|--|-------------|------------|
| Course Code | M23BCS601 | CIE Marks | 50 |
| Number of Lecture Hours/Week(L: T: P: S) | (2:2:2:0) | SEE Marks | 50 |
| Total Number of Lecture Hours | 40 Hours Theory +20 Hours Practical | Total Marks | 100 |
| Credits | 4 | Exam Hours | 03 |
| Course Learning Objectives: <ol style="list-style-type: none"> 1. Explain the use of learning full stack web development. 2. Make use of rapid application development in the design of responsive web pages. 3. Illustrate Models, Views and Templates with their connectivity in Django for full stack web development. 4. Demonstrate the use of state management and admin interfaces automation in Django. 5. Design and implement Django apps containing dynamic pages with SQL databases. | | | |
| Module-1: MVC based Web Designing | | | |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| |
|---|
| Web framework, MVC Design Pattern, Django Evolution, Views, Mapping URL to Views, Working of Django URL Confs and Loose Coupling, Errors in Django, Wild Card patterns in URLS. Textbook 1: Chapter 1 and Chapter 3 |
| Module -2: Django Templates and Models |
| Template System Basics, Using Django Template System, Basic Template Tags and Filters, MVT Development Pattern, Template Loading, Template Inheritance, MVT Development Pattern. Configuring Databases, Defining and Implementing Models, Basic Data Access, Adding Model String Representations, Inserting/Updating data, Selecting and deleting objects, Schema Evolution Textbook 1: Chapter 4 and Chapter 5 |
| Module -3: Django Admin Interfaces and Model Forms |
| Activating Admin Interfaces, Using Admin Interfaces, Customizing Admin Interfaces, and Reasons to use Admin Interfaces. Form Processing, Creating Feedback forms, Form submissions, custom validation, creating Model Forms, URLConf Ticks, and Including Other URLConfs. Textbook 1: Chapters 6, 7 and 8 |
| Module -4: Generic Views and Django State Persistence |
| Using Generic Views, Generic Views of Objects, Extending Generic Views of objects, Extending Generic Views. MIME Types, Generating Non-HTML contents like CSV and PDF, Syndication Feed Framework, Sitemap framework, Cookies, Sessions, Users and Authentication. Textbook 1: Chapters 9, 11 and 12 |
| Module -5: jQuery and AJAX Integration in Django |
| Ajax Solution, Java Script, XMLHttpRequest and Response, HTML, CSS, JSON, iFrames, Settings of Java Script in Django, jQuery and Basic AJAX, jQuery AJAX Facilities, Using jQuery UI Autocomplete in Django Textbook 2: Chapters 1, 2 and 7. |
| Laboratory Component: 1. Installation of Python, Django and Visual Studio code editors can be demonstrated. Creation of virtual environment, Django project and App should be demonstrated 2. Develop a Django app that displays A. current date and time in server B. date and time four hours ahead and four hours before as an offset of current date and time in server. |

| | |
|--|---|
| 3. | Develop a simple Django app that displays an unordered list of fruits and ordered list of selected students for an event |
| 4. | Develop a layout.html with a suitable header (containing navigation menu) and footer with copyright and developer information. Inherit this layout.html and create 3 additional pages: contact us, About Us and Home page of any website. |
| 5. | Develop a Django app that performs student registration to a course. |
| A. | It should also display list of students registered for any selected course. Create students and course as models with enrolment as ManyToMany field. |
| B. | For student and course models created, register admin interfaces, perform migrations and illustrate data entry through admin forms. |
| C. | For students enrolment, create a generic class view which displays list of students and detail view that displays student details for any selected student in the list. |
| 6. | Develop a Model form for student that contains his topic chosen for project, languages used and duration with a model called project. |
| 9.. | Develop example Django app that performs CSV and PDF generation for any models created in previous laboratory component. |
| 10. | Develop a registration page for student enrolment as done in Program 5, but without page refresh using AJAX. |
| 11. | Develop a search application in Django using AJAX that displays courses enrolled by a student being searched. |
| Textbooks : | |
| 1. | Adrian Holovaty, Jacob Kaplan Moss, The Definitive Guide to Django: Web Development Done Right, Second Edition, Springer-Verlag Berlin and Heidelberg GmbH & Co. KG Publishers, 2009 |

| 3. | Model Forms with Django: https://www.youtube.com/watch?v=gMM1rtTwKxE |
| 4. | Real time Interactions in Django: https://www.youtube.com/watch?v=3gHmfoeZ45k |
| 5. | AJAX with Django for beginners: https://www.youtube.com/watch?v=3VaKNyjlxAU |
| Activity Based Learning (Suggested Activities in Class)/ Practical Based learning | |
| 1. | Real world problem solving - applying the Django framework concepts and its integration with AJAX to develop any shopping website with admin and user dashboards. |

4. Syllabus Timeline

| S/L | Syllabus Timeline | Description |
|-----|------------------------------------|---|
| 1 | Week 1: MVC based Web Designing | Understand the concept of MVC and MVT architecture, Evolution of Django, views, working of Django URL confs and Loose coupling. Understand how to install python, Django and visual studio code and how to create virtual environment and develop a Django app that display current date and time with different scenarios |
| 2 | Week 2: Django Templates | Creating HTML templates, Using Django's template language for dynamic content, Template inheritance and context rendering. Develop a simple Django app of order and unordered list of fruits and students for an event and also develop an app for layout.html |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|---|---|--|
| 3 | Week 3-4: Models | Defining Django models and fields, Performing database migrations. Introduction to Django's ORM (Object-Relational Mapping), understanding concept of inserting, updating, selecting and deleting the data in database. Develop a Django app that performs student registration to a course. It should also display list of students registered for any selected course. Create students and course as models with enrolment as ManyToMany field. |
| 4 | Week 5-6: Django Admin Interfaces | Understand the concept of admin interface and how to use, active and customizing admin interface. |
| | | For student and course models, register admin interfaces, perform migrations and illustrate data entry through admin forms. |
| 5 | Week 7-8: Model Forms | Creating and handling forms in Django and understand how to create a feedback form, model forms. Develop a Model form for student that contains his topic chosen for project, languages used and duration with a model called project |
| 6 | Week 9-10: Generic Views | Definition of generic views, extending generic views of object, different types of generic view. Understanding the concept of generating non-HTML contents like CSV and PDF. For student's enrolment, create a generic class view which displays list of students and detail view that displays student details for any selected student in the list. Develop example Django app that performs CSV and PDF generation for any models created in previous laboratory component. |
| 7 | Week 11-12: jQuery and Integration in Django AJAX | Understand the concept of HTML request and Response, jQuery, Ajax solution, CSS, JSON with code snippet. Develop a registration page for student enrolment but without page refresh using AJAX. Develop a search application in Django using AJAX that displays courses enrolled by a student being searched. |

5. Teaching-Learning Process Strategies

| S/L | TLP Strategies: | Description |
|-----|---|--|
| 1 | Interactive Lectures and Demos | Use interactive lectures to introduce new concepts, supported by live coding sessions where the instructor demonstrates how to implement these concepts in real-time. For example, while teaching Django models, the instructor can create models in a live coding session and show how they translate into database tables. |
| 2 | Hands-on Labs and Coding Exercises | Incorporate regular lab sessions where students work on coding exercises that apply the concepts taught in lectures. After learning about Django views and templates, assign exercises where students create their own views and templates for a small web application. |
| 3 | Project-Based Learning | Use a project-based learning approach where students build a full stack application over the course duration, integrating all aspects of development (frontend, backend, database, and deployment). Start with smaller individual projects (e.g., a simple blog), leading up to a capstone project where students create a more complex application, such as an e-commerce site. |
| 4 | Collaborative Learning and Pair Programming | Encourage collaborative learning through pair programming and group projects, where students can work together to solve problems. Assign pair programming tasks, such as creating RESTful APIs or implementing authentication, and group projects where teams build different modules of a larger application. |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|---|---|--|
| 5 | Flipped Classroom Approach | Implement a flipped classroom model, where students study theoretical concepts through online resources (videos, articles) before class, and class time is dedicated to discussions, Q&A, and practical exercises. Assign pre-class videos on Django's ORM, and use class time to discuss advanced queries and perform hands-on exercises. |
| 6 | Continuous Assessment and Feedback | Use formative assessments (quizzes, coding challenges) and provide regular feedback to monitor student progress and address learning gaps. After each module, conduct a quiz or a coding challenge to assess understanding. Provide detailed feedback on code quality, efficiency, and best practices. |
| 7 | Use of Real-World Case Studies | Integrate real-world case studies into the curriculum to demonstrate how full stack development is applied in various industries. Analyze a case study of a successful web application, discussing the technologies used, the architecture, and the challenges faced during development. |
| 8 | Guest Lectures and Industry Interaction | Invite industry professionals to give guest lectures or hold Q&A sessions to provide insights into the latest trends and best practices in full stack development. |
| | | Arrange guest lectures on topics like cloud deployment, scalability, or emerging technologies in full stack development. |
| 9 | Supplementary Resources and Self-Learning | Provide supplementary resources like online tutorials, documentation, and recommended reading to encourage self-learning and deeper exploration of topics. Share resources on advanced Django topics, front-end frameworks, or best practices in web security, encouraging students to explore these on their own. |

6. Assessment Details (both CIE and SEE)

The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 40% of the maximum marks (20 marks out of 50). A student shall be deemed to have satisfied the academic requirements and earned the credits allotted to each subject/ course if the student secures not less than 35% (18 Marks out of 50) in the semester-end examination (SEE), and a minimum of 40% (40 marks out of 100) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together

Theory Course with 4 credits: Integrated Professional Core Course (IPC)

| Components | | Number | Weightage | Max. Marks | Min. Marks |
|---------------|---------------------------------|------------|-----------|------------|------------|
| Theory (A) | Internal Assessment-Tests (A) | 2 | 60% | 15 | 06 |
| | Assignments/Quiz/Activity (B) | 2 | 40% | 10 | 04 |
| | Total Marks | | 100% | 25 | 10 |
| Components | | Number | Weightage | Max. Marks | Min. Marks |
| Laboratory(B) | Record Writing | Continuous | 60% | 15 | 06 |
| | Test at the end of the semester | 1 | 40% | 10 | 04 |
| | Total Marks | | 100% | 25 | 10 |

Final CIE Marks = (A) + (B) Semester

End Examination pattern:

1. Question paper pattern will be ten questions. Each question is set for 20 marks. The medium of the question paper shall be English unless otherwise it is mentioned.
2. There shall be 2 question from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have mix of topics under that module if necessary.
3. The students have to answer 5 full questions selecting one full question from each module.

4. The question paper may include at least one question from the laboratory component.

5. Marks scored will be proportionally scaled down to 50 marks

7. Learning Objectives

| S/L | Learning Objectives | Description |
|-----|--|---|
| 1 | Master Core Python Programming Skills | Develop a solid understanding of Python programming, including advanced concepts such as object-oriented programming, file handling, and libraries. |
| 2 | Understand and Apply Django Framework | Gain in-depth knowledge of Django's MVC (Model-View-Controller) architecture and how it facilitates web development. |
| 3 | Develop Database Management Skills | Learn how to design, implement, and manage databases using Django's ORM and SQL. |
| 4 | Build and Style User Interfaces | Acquire skills in front-end technologies like HTML, CSS, and JavaScript to create responsive and interactive user interfaces. |
| 5 | Implement Security Best Practices | Learn how to secure web applications using Django's built-in security features and web security best practices. |
| 6 | Integrate Front-End Frameworks with Django | Learn how to integrate modern front-end frameworks (e.g., React, Vue.js) with Django for building dynamic, single-page applications |
| 7 | Test and Debug Django Applications | Understand the importance of testing and debugging, and learn how to write and run tests in Django |

8. Course Outcomes (COs) and Mapping with POs/ PSOs Course Outcomes (COs)

| COs | Description |
|--------------------|--|
| M23BCS601.1 | Describe the working of MVT based full stack web development with Django. |
| M23BCS601.2 | Apply the Django framework libraries to render non HTML contents like CSV and PDF. |
| M23BCS601.3 | Analyse the role of Template Inheritance and Generic views for developing full stack web applications |
| M23BCS601.4 | Designing of Models and Forms for rapid development of web pages and Perform jQuery based AJAX integration to Django Apps to build responsive full stack web applications. |
| M23BCS601.5 | Demonstrate the ability to design and develop python programs by using various Django frameworks and document the result. |

CO-PO-PSO Mapping

| COs/POs | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 | PSO1 | PSO2 |
|--------------------|----------|----------|------------|----------|------------|----------|----------|----------|----------|----------|----------|----------|-------------|-------------|
| M23BCS601.1 | 3 | - | - | - | - | - | - | - | - | - | - | 2 | 2 | - |
| M23BCS601.2 | - | 3 | - | - | - | - | - | - | - | - | - | 2 | 2 | - |
| M23BCS601.3 | - | 3 | 2 | - | - | - | - | - | - | - | - | 2 | - | 2 |
| M23BCS601.4 | - | - | 2 | - | 2 | - | - | - | - | - | - | 2 | - | 3 |
| M23BCS601.5 | 3 | 3 | 3 | - | 3 | - | - | - | - | - | - | 2 | 3 | 3 |
| M23BCS601 | 3 | 3 | 2.3 | - | 2.5 | - | - | - | - | - | - | 2 | 2.33 | 2.33 |

9. Assessment Plan

Continuous Internal Evaluation (CIE)

| | CO1 | CO2 | CO3 | CO4 | CO5 | Total |
|----------|-----------|-----------|----------|----------|-----|-----------|
| Module 1 | 10 | | | | | 10 |
| Module 2 | | 4 | 6 | | | 10 |
| Module 3 | | 10 | | | | 10 |
| Module 4 | | | 5 | 5 | | 10 |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | | | | | |
|--------------|-----------|-----------|-----------|----------|-----------|-----------|
| Module 5 | | | | | 10 | 10 |
| Total | 10 | 14 | 10 | 5 | 10 | 50 |

Semester End Examination (SEE)

| | CO1 | CO2 | CO3 | CO4 | CO5 | Total |
|--------------|-----------|-----------|-----------|-----------|-----------|------------|
| Module 1 | 20 | | | | | 20 |
| Module 2 | | 8 | 12 | | | 20 |
| Module 3 | | 20 | | | | 20 |
| Module 4 | | | 10 | 10 | | 20 |
| Module 5 | | | | | 20 | 20 |
| Total | 20 | 28 | 22 | 10 | 20 | 100 |

Conditions for SEE Paper Setting:

Each module of SEE question paper should be allocated with questions for 20% of the total SEE marks. 10.

Future with this Subject

- Continued Popularity and Growth
 - Widespread Adoption: Django will continue to be a popular choice for developers due to its robustness, ease of use, and the large number of built-in features that simplify complex tasks.
 - Community and Ecosystem: The Django community is active and growing, with ongoing development of new features, libraries, and extensions, ensuring that Django remains relevant and up-to-date.
- Enhanced Performance and Scalability
 - Machine Learning and AI: Integration with machine learning libraries and AI tools will become more prevalent, allowing developers to incorporate intelligent features into their Django applications.
 - Blockchain: Django could be used to develop applications that interact with blockchain technologies, providing secure and decentralized solutions.
- Advanced Front-End Integration
 - Single-Page Applications (SPAs): Django will increasingly integrate with modern front-end frameworks like React, Vue.js, and Angular to build dynamic SPAs, improving user experience and application responsiveness.
 - Progressive Web Apps (PWAs): Django's ability to support PWAs will allow developers to create applications that work seamlessly across different platforms and devices, offering an app-like experience in the browser.
- Enhanced Security Features
 - Built-In Security Enhancements:** As security threats evolve, Django will continue to strengthen its security features to protect against new vulnerabilities and ensure secure web application development.
 - Compliance:** Django will support compliance with various data protection regulations and standards, making it easier for developers to build applications that meet legal requirements.
- Growing Job Market and Career Opportunities
 - Increased Demand: The demand for full stack developers skilled in Django will likely continue to grow, driven by the need for robust web applications across various industries.
 - Career Specialization: Developers with expertise in Django will have opportunities to specialize in areas such as enterprise application development, e-commerce solutions, and data-driven applications.
- Cloud and DevOps Integration
 - Cloud-Native Development: Django applications will increasingly be designed for cloud environments, leveraging cloud services for scalability, storage, and computing power.
 - DevOps Practices: Integration with DevOps practices will streamline the development, deployment, and maintenance of Django applications, promoting continuous integration and continuous deployment (CI/CD) workflows.

|--------------------------|--|-----------|
| 6 th Semester | Professional Core Course (PC) Machine Learning | M23BCS602 |
|--------------------------|--|-----------|

1. Prerequisites

| S/L | Proficiency | Prerequisites |
|-----|--|---|
| 1. | Basic Mathematics | <ul style="list-style-type: none"> • Good understanding of calculus (derivatives, integrals, optimization). • Familiarity with probability and statistics (probability distributions, hypothesis testing). |
| 2. | Programming | <ul style="list-style-type: none"> • Proficiency in at least one programming language commonly used for machine learning (Python, R). • Experience with data structures and algorithms. • Basic understanding of software engineering principles (code organization, debugging). |
| 3. | Basic Understanding of Data Structures | <ul style="list-style-type: none"> • Concepts of arrays, lists, trees, and basic algorithms for sorting and searching. |
| 4. | Foundation in linear algebra | <ul style="list-style-type: none"> • Knowledge of matrices, vectors, eigenvalues, gradients, and optimization. |

2. Competencies

| S/L | Competency | KSA Description |
|-----|------------|-----------------|
|-----|------------|-----------------|

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|---|--|---|
| 1 | Data Exploration and Preparation | <ul style="list-style-type: none"> Knowledge: Understanding various data types, data quality issues, and data preprocessing techniques. Skills: Ability to clean, transform, and prepare data for machine learning algorithms. Attitudes: Appreciation for the importance of high-quality data. |
| 2 | Supervised Learning Algorithms | <ul style="list-style-type: none"> Knowledge: Understanding the principles of supervised learning, including regression and classification algorithms (linear regression, logistic regression, decision trees, support vector machines). Skills: Ability to apply, evaluate, and tune these algorithms. Attitudes: Critical thinking in model selection and evaluation. |
| 3 | Unsupervised Learning and Dimensionality Reduction | <ul style="list-style-type: none"> Knowledge: Understanding clustering and dimensionality reduction techniques (k-means, PCA). Skills: Ability to apply these methods for data exploration and feature engineering. Attitudes: Openness to exploring data patterns and reducing data complexity. |
| 4 | Model Evaluation and Selection | <ul style="list-style-type: none"> Knowledge: Understanding metrics for evaluating model performance (accuracy, precision, recall, F1-score, ROC curves). Skills: Ability to compare models, perform cross-validation, and select the best model for a given task. Attitudes: Objectivity in model assessment. |
| 5 | Ethical Considerations in Machine Learning | <ul style="list-style-type: none"> Knowledge: Awareness of ethical implications, bias in data, and fairness considerations. Skills: Ability to identify and mitigate bias in machine learning models. Attitudes: Responsibility and a commitment to ethical AI practices. |

3. Syllabus

| Machine Learning SEMESTER – VI | | | |
|--|-----------|-------------|-----|
| Course Code | M23BCS602 | CIE Marks | 50 |
| Number of Lecture Hours/Week(L: T: P: S) | (3:2:0:0) | SEE Marks | 50 |
| Total Number of Lecture Hours | 50 Hours | Total Marks | 100 |
| Credits | 04 | Exam Hours | 03 |
| Course Objectives: | | | |
| 1. Introduce the fundamental concepts and principles of machine learning. | | | |
| 2. Provide hands-on experience with commonly used machine learning algorithms. | | | |
| 3. Develop skills in data preprocessing, feature engineering, model building, evaluation, and selection. | | | |
| 4. Foster critical thinking about the ethical implications of machine learning. | | | |
| 5. Prepare students to apply machine learning techniques to real-world problems. | | | |
| Module -1 | | (10 hours) | |
| Machine Learning and Data Essentials | | | |
| Introduction to Machine Learning, Machine Learning Explained, Machine Learning in Relation to Other Fields, Types of Machine Learning, Challenges of Machine Learning, Machine Learning Process, Machine Learning Applications, What is Data?, Big Data Analytics and Types of Analytics, Big Data Analysis Framework. | | | |
| Chapter 1 (All Sections), Chapter 2 (Sections 2.1, 2.2, 2.3) | | | |
| Module -2 | | (10 hours) | |

Data Analysis and Learning Foundations.

Descriptive Statistics, Univariate Data Analysis and Visualization, Bivariate Data and Multivariate Data, Essential Mathematics for Multivariate Data, Introduction to Learning and its Types. Chapter 2 (Sections 2.4, 2.5, 2.6, 2.7, 2.8), Chapter 3 (Section 3.1)

Module -3**(10 hours)****Regression and Supervised Learning**

Introduction to Computation Learning Theory, Design of a Learning System, Introduction to Concept Learning, Induction Biases, Modeling in Machine Learning, Learning Frameworks, Introduction to Regression, Introduction to Linearity, Correlation, and Causation, Introduction to Linear Regression, Validation of Regression Methods. Chapter 3 (Sections 3.2, 3.3, 3.4, 3.5, 3.6, 3.7), Chapter 5 (Sections 5.1, 5.2, 5.3, 5.4)

Module -4**(10 hours)****Advanced Supervised Learning and Bayesian Principles**

Multiple Linear Regression, Polynomial Regression, Logistic Regression, Ridge, Lasso, and Elastic Net Regression, Introduction to Decision Tree Learning Model, Decision Tree Induction Algorithms, Introduction to Probability-based Learning, Fundamentals of Bayes Theorem, Classification Using Bayes Model, Introduction to Ensemble Learning, Ensembling Techniques, Parallel Ensemble Models.

Chapter 5 (Sections 5.5, 5.6, 5.7, 5.8), Chapter 6 (Sections 6.1, 6.2), Chapter 8 (Sections 8.1, 8.2, 8.3), Chapter 12 (Sections 12.1, 12.2).

Module -5**(10 hours)****Unsupervised Learning, Reinforcement Learning, and Beyond**

Introduction to Clustering Approaches, Proximity Measures, Hierarchical Clustering Algorithms, Partitional Clustering Algorithm, Overview of Reinforcement Learning, Scope of Reinforcement Learning, Reinforcement Learning As Machine Learning, Probabilistic Graphical Models, Artificial Neural Networks, Support Vector Machines, Genetic Algorithms, Deep Learning.

Chapter 13 (Sections 13.1, 13.2, 13.3, 13.4), Chapter 14 (Sections 14.1, 14.2, 14.3), Overview of Chapters 9, 10, 11, 15, 16.

4. Syllabus Timeline

| S/L | Syllabus Timeline | Description |
|-----|-------------------|---|
| 1 | Week 1-2: | Introduction to ML, Types of Learning, Applications, Data Types, Descriptive Statistics, Visualization (Modules 1 & 2, introductory portions) |
| 2 | Week 3-4: | Regression Analysis: Linear, Multiple Linear, Polynomial, Model Evaluation (Module 3) |
| 3 | Week 5-6: | Classification with Logistic Regression, Regularization, Bias-Variance Tradeoff (Module 3 & 4 - introductory part) |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|----------|-------------|--|
| 4 | Week 7-8: | Decision Trees, Ensemble Methods (Bagging, Random Forests), Evaluating Classifiers (Module 4) |
| 5 | Week 9-10: | Unsupervised Learning: Clustering (k-means), Dimensionality Reduction (PCA), Applications (Module 5) |
| 6 | Week 11-12: | Reinforcement Learning Fundamentals, Applications, Introduction to Advanced Topics: Probabilistic Graphical Models, Neural Networks, Support Vector Machines, Genetic Algorithms, Deep Learning (Module 5 & Overviews) |

5. Teaching-Learning Process Strategies

| S/L | TLP Strategies: | Description |
|-----|------------------------|--|
| 1 | Lecture Method | Deliver core concepts and foundational knowledge, interactive discussions. |
| 2 | Code Demonstrations | In-class coding examples using Python and relevant ML libraries (like scikitlearn) to illustrate algorithm implementation and data analysis techniques. |
| 3 | Project-Based Learning | Hands-on projects where students apply ML to datasets and solve real-world inspired problems. |
| 4 | Case Studies | Analyze real-world applications of machine learning to understand its impact and challenges. |
| 5 | Group Discussions | Facilitate critical thinking and encourage collaborative learning through discussions on ethical considerations, future trends, and current events in AI/ML. |
| 6 | Guest Lectures | Invite industry experts to provide insights into practical applications and career paths in Machine Learning. |

6. Assessment Details (both CIE and SEE) Continuous Internal Evaluation:

The minimum CIE marks requirement is 40% of maximum marks in each component. **CIE**

Split up

| Components | | Number | Weightage | Max. Marks | Min. Marks |
|--------------------|-------------------------------|--------|-----------|------------|------------|
| (i) | Internal Assessment-Tests (A) | 2 | 50% | 25 | 10 |
| (ii) | Assignments/Quiz/Activity (B) | 2 | 50% | 25 | 10 |
| Total Marks | | | | 50 | 20 |

Final CIE Marks = (A) + (B) Average

internal assessment shall be the average of the 2 test marks conducted.

Semester End Examination:

1. Question paper pattern will be ten questions. Each question is set for 20 marks. The medium of the question paper shall be English unless otherwise it is mentioned.
2. There shall be 2 question from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have mix of topics under that module if necessary.
3. The students have to answer 5 full questions selecting one full question from each module.
4. Marks scored will be proportionally scaled down to 50 mark

7. Learning Objectives

| S/L | Learning Objectives | Description |
|-----|---|--|
| 1 | Data Understanding and Preparation for Machine Learning | Comprehend data types, data quality issues, and learn data preprocessing techniques for effective machine learning. |
| 2 | Supervised Learning Concepts and Algorithms | Understand the principles of supervised learning, including regression and classification algorithms. Be able to apply, evaluate, and tune these algorithms for predictive modeling. |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|---|---|---|
| 3 | Unsupervised Learning Techniques | Grasp the concepts of clustering, dimensionality reduction, and their applications in data exploration and feature engineering. Be able to apply common methods like k-means and PCA. |
| 4 | Model Evaluation, Selection, and Performance Metrics | Learn various metrics for evaluating model performance and be able to compare and select the best model for a given task using techniques like cross-validation. |
| 5 | Ethical Implications and Applications of Machine Learning | Develop an understanding of the ethical implications of machine learning, including bias in data, fairness considerations, and responsible AI development practices. |
| 6 | Future Trends and Advanced Topics in Machine Learning | Gain awareness of current trends, emerging technologies, and advanced topics in machine learning to foster continuous learning and exploration in the field. |

8. Course Outcomes (COs) and Mapping with POs/ PSOs

Course Outcomes (COs)

| COs | Description |
|--------------------|--|
| M23BCS602.1 | Understand the fundamental concepts of machine learning, its types, applications, and the ethical implications of its use. |
| M23BCS602.2 | Apply data preprocessing techniques and perform exploratory data analysis to prepare data for machine learning algorithms. |
| M23BCS602.3 | Implement unsupervised learning techniques for clustering and dimensionality reduction. |
| M23BCS602.4 | Build, evaluate, and compare supervised learning models for regression and classification tasks. |
| M23BCS602.5 | Analyze and interpret the results of machine learning models and communicate findings effectively. |

CO-PO-PSO Mapping

| COs/POs | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 | PSO1 | PSO2 |
|--------------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|------|------|
| M23BCS602.1 | 2 | - | - | - | - | - | - | - | - | - | - | - | 3 | 3 |
| M23BCS602.2 | - | 3 | - | - | - | - | - | - | - | - | - | - | 3 | - |
| M23BCS602.3 | - | - | 3 | - | 3 | - | - | - | - | - | - | - | - | 3 |
| M23BCS602.4 | - | - | - | 3 | 3 | - | - | - | - | - | - | - | 3 | - |
| M23BCS602.5 | - | - | - | 3 | - | - | - | - | - | 3 | - | - | - | 3 |
| M23BCS602 | 2 | 3 | 3 | 3 | 3 | - | - | - | - | 3 | - | - | 3 | 3 |

9. Assessment Plan

Continuous Internal Evaluation (CIE)

| | CO1 | CO2 | CO3 | CO4 | CO5 | Total |
|--------------|-----------|-----------|-----------|-----------|-----------|-----------|
| Module 1 | 10 | | | | | 10 |
| Module 2 | | 10 | | | | 10 |
| Module 3 | | | 10 | | | 10 |
| Module 4 | | | | 10 | | 10 |
| Module 5 | | | | | 10 | 10 |
| Total | 10 | 10 | 10 | 10 | 10 | 50 |

Semester End Examination (SEE)

| | CO1 | CO2 | CO3 | CO4 | CO5 | Total |
|--------------|-----------|-----------|-----------|-----------|-----------|------------|
| Module 1 | 20 | | | | | 20 |
| Module 2 | | 20 | | | | 20 |
| Module 3 | | | 20 | | | 20 |
| Module 4 | | | | 20 | | 20 |
| Module 5 | | | | | 20 | 20 |
| Total | 20 | 20 | 20 | 20 | 20 | 100 |

10. Future with this Subject:

1. **Deep Learning Specialization:** The knowledge gained here primes you to explore the fascinating world of deep learning (CNNs, RNNs, Transformers). Imagine designing algorithms for self-driving cars, medical image analysis, or even writing creative text—all made possible with deep learning and highly relevant to your future careers.
2. **MLOps (Machine Learning Operations):** Building ML models is just the start. MLOps focuses on deploying, managing, and scaling those models to real-world applications, a crucial skill for ML engineers and data scientists.
3. **Explainable AI (XAI):** As AI makes more decisions, understanding why becomes paramount. XAI techniques, which focus on interpreting model behavior, are essential for building trust and ensuring ethical AI development, especially in sensitive fields like healthcare and finance.
4. **Edge Computing and IoT:** The future is interconnected. By integrating ML with edge devices and the Internet of Things (IoT), you can create intelligent systems that react in real-time – from smart homes and factories to autonomous vehicles, creating massive career opportunities in the process.
5. **Reinforcement Learning Applications:** Imagine teaching robots to learn like humans. Reinforcement learning makes this possible and is poised to revolutionize fields like robotics, control systems, and personalized learning experiences.
6. **Generative AI:** This rapidly advancing field uses models like GANs and diffusion models to create stunningly realistic images, videos, and even music, blurring the lines between human and machine creativity and opening exciting career paths for those with the right ML skills.

| | | |
|--------------------------|--|-------------------|
| 6 th Semester | Professional Elective-II (PE) BLOCKCHAIN TECHNOLOGY | M23BCS603A |
|--------------------------|--|-------------------|

1. Prerequisites

| S/L | Proficiency | Prerequisites |
|-----|--------------------------------------|---|
| 1 | Basic Programming Skills | Understanding of programming concepts and knowledge of languages like Python, JavaScript, or C++ is essential. |
| 2 | Data Structures | Familiarity with data structures such as linked lists, hash maps, and graphs is crucial. |
| 3 | Basic Knowledge of Computer Security | A good grasp of cryptographic principles is important for securing blockchain transactions. |
| 4 | Distributed Systems and Networking | Understanding how distributed systems work and the basics of networking can help grasp how blockchain nodes communicate and maintain consensus. |
| 5 | Basic Knowledge of Economics | Since blockchain often intersects with cryptocurrencies, having a basic understanding of economic principles can be beneficial. |

2. Competencies

| S/L | Competency | KSA Description |
|-----|--|--|
| 1 | Blockchain Fundamentals | Knowledge: Understand the basic concepts of blockchain, including its architecture, how it works, and its various applications. Skills: Explain blockchain concepts clearly and apply them in practical scenarios. Attitudes: Curiosity and eagerness to explore new technologies and their potential impacts. |
| 2 | Decentralized system & Cryptography | Knowledge: Familiarity with decentralized networking and cryptographic principles such as public-key cryptography, cryptographic hashing, and digital signatures. Skills: Implement cryptographic algorithms like Secret Key Cryptography (SKC), Public Key Cryptography (PKC) & Hash Functions. Attitudes: Attention to detail and a strong focus on security and privacy. |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|---|--|--|
| 3 | Basic Knowledge of Cryptocurrency | Knowledge: <ul style="list-style-type: none"> Understand the basic principles of Bitcoin, including its creation, blockchain technology, mining process, and transaction mechanisms. Familiarity with various alternative cryptocurrencies like Ethereum, Litecoin, Ripple, and others, including their unique features and use cases. Skills: <ul style="list-style-type: none"> Proficiency in programming languages such as Python, Solidity, and JavaScript for developing blockchain applications and smart contracts. Understanding and implementing security measures to protect digital wallets, private keys, and transactions from potential threats. Attitudes: <ul style="list-style-type: none"> Commitment to ethical practices in cryptocurrency development. |
| 4 | Smart Contracts | Knowledge: Understanding of smart contracts, particularly on platforms like Ethereum, and how they automate and enforce agreements. Skills: Proficiency in writing and deploying smart contracts using languages like python. Attitudes: Precision and thoroughness in coding to ensure accuracy and reliability. |
| 5 | Understanding Different Blockchains | Knowledge: Understanding of non-Cryptocurrency Applications like supply chain management, IoT and others. Skills: Proficiency in blockchain fundamentals. Attitudes: Willingness to adapt to the rapidly changing landscape of blockchain. |

3. Syllabus

| BLOCKCHAIN TECHNOLOGY SEMESTER – VI | | | |
|---|------------|-------------|-----|
| Course Code | M23BCS603A | CIE Marks | 50 |
| Number of Lecture Hours/Week (L: T: P: S) | (3:0:0:0) | SEE Marks | 50 |
| Total Number of Lecture Hours | 40 Hours | Total Marks | 100 |
| Credits | 03 | Exam Hours | 03 |
| Course objectives: This course will enable students to: 1. Define and explain the fundamentals of Blockchain 2. Illustrate the technologies of blockchain 3. Describe the models of blockchain 4. Analyze and demonstrate the Ethereum | | | |
| Module -1 | | | |
| Blockchain 101: Distributed systems, History of blockchain, Introduction to blockchain, Types of blockchain, CAP theorem and blockchain, Benefits and limitations of blockchain. Text Book 1: Chapter 1 | | | |
| Module -2 | | | |
| Decentralization and Cryptography: Decentralization using blockchain, Methods of decentralization, Routes to decentralization, Decentralized organizations. Cryptography and Technical Foundations: Cryptographic primitives, Asymmetric cryptography, Public and private keys Text Book 1: Chapter 2, Chapter 4 | | | |
| Module -3 | | | |
| Bitcoin Bitcoin, Transactions, Blockchain, Bitcoin payments. Theoretical foundations, Bitcoin limitations, Namecoin, Litecoin, Primecoin, Zcash Text Book 1: Chapter 5, Chapter 6, Chapter 8 | | | |
| Module -4 | | | |

Smart Contracts and Ethereum 101:

Smart Contracts: Definition, Ricardian contracts. Ethereum 101: Introduction, Ethereum blockchain, Elements of the Ethereum blockchain, Precompiled contracts. **Text Book 1: Chapter 9, Chapter 10**

Module -5**Alternative Blockchains:** Blockchains

Blockchain- Outside of Currencies: Internet of Things, Government, Health, Finance, Media **Text**

Book 1: Chapter 17**Text Books:**

1. Mastering Blockchain - Distributed ledgers, decentralization and smart contracts explained, Imran Bashir, Packt Publishing Ltd, Second Edition, ISBN 978-1-78712-544-5, 2017
2. Bitcoin and Cryptocurrency Technologies, Arvind Narayanan, Joseph Bonneau, Edward Felten, 2016

Reference Books:

1. Blockchain Basics: A Non-Technical Introduction in 25 Steps, Daniel Drescher, Apress, First Edition, 2017
2. Mastering Bitcoin: Unlocking Digital Cryptocurrencies, Andreas M. Antonopoulos, O'Reilly Media, First Edition, 2014.

4. Syllabus Timeline

| S/L | Syllabus Timeline | Description |
|-----|---|--|
| 1 | Week 1-2: Blockchain 101 | <ul style="list-style-type: none"> • Competency: Blockchain Fundamentals • Knowledge: Understand the basic concepts of blockchain, including its architecture, how it works, and its various applications. • Skills: Explain blockchain concepts clearly and apply them in practical scenarios. |
| 2 | Week 3-4: Decentralization and Cryptography | <ul style="list-style-type: none"> • Competency: Decentralized system & Cryptography • Knowledge: Familiarity with decentralized networking and cryptographic principles such as public-key cryptography, cryptographic hashing, and digital signatures. • Skills: Implement cryptographic algorithms like Secret Key Cryptography (SKC), Public Key Cryptography (PKC) & Hash Functions. |
| 3 | Week 5-6: Bitcoin and Alternative Coins | <ul style="list-style-type: none"> • Competency: Basic Knowledge of cryptocurrency • Knowledge: Understand the basic principles of Bitcoin, including its creation, blockchain technology, mining process, and transaction mechanisms. Familiarity with various alternative cryptocurrencies like Ethereum, Litecoin, Ripple, and others, including their unique features and use cases. • Skills: Proficiency in programming languages such as Python, Solidity, and JavaScript for developing blockchain applications and smart contracts. Understanding and implementing security measures to protect digital wallets, private keys, and transactions from potential threats. |
| 4 | Week 7-8: Smart Contracts and Ethereum 101 | <ul style="list-style-type: none"> • Competency: Smart Contracts • Knowledge: Understanding of smart contracts, particularly on platforms like Ethereum, and how they automate and enforce agreements. • Skills: Writing and deploying smart contracts using languages like python. |
| 5 | Week 9-10: Alternative Blockchains | <ul style="list-style-type: none"> • Competency: Understanding Different Blockchains • Knowledge: Understanding of non-Cryptocurrency Applications like supply chain management, IoT and others. • Skills: Proficiency in blockchain fundamentals. |

5. Teaching-Learning Process Strategies

| S/L | TLP Strategies: | Description |
|-----|---|---|
| 1 | Lecture Method | <ul style="list-style-type: none"> Utilize various teaching methods within the lecture format to reinforce competencies. |
| 2 | Video/Animation | <ul style="list-style-type: none"> Incorporate visual aids like videos/animations to enhance understanding of the block chain concepts. |
| 3 | Collaborative Learning | <ul style="list-style-type: none"> Encourage collaborative learning for improved competency application. |
| 4 | Higher Order Thinking (HOTS) Questions: | <ul style="list-style-type: none"> Pose HOTS questions to stimulate critical thinking related to each competency. |
| 5 | Problem-Based Learning (PBL) | <ul style="list-style-type: none"> Implement PBL to enhance analytical skills and practical application of competencies |
| 6 | Multiple Representations | <ul style="list-style-type: none"> Introduce topics in various representations to reinforce competencies |
| 7 | Real-World Application | <ul style="list-style-type: none"> Discuss practical applications to connect theoretical concepts with real-world competencies. |
| 8 | Flipped Class Technique | <ul style="list-style-type: none"> Utilize a flipped class approach, providing materials before class to facilitate deeper understanding of competencies |
| 9 | Programming Assignments | <ul style="list-style-type: none"> Assign programming tasks to reinforce practical skills associated with competencies. |

6. Assessment Details (both CIE and SEE)

The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 40% of the maximum marks (20 marks out of 50). A student shall be deemed to have satisfied the academic requirements and earned the credits allotted to each subject/ course if the student secures not less than 35% (18 Marks out of 50) in the semester-end examination(SEE), and a minimum of 40% (40 marks out of 100) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together **Continuous Internal Evaluation:**

| Components | | Number | Weightage | Max. Marks | Min. Marks |
|-------------|-------------------------------|--------|-----------|------------|------------|
| (i) | Internal Assessment-Tests (A) | 2 | 50% | 25 | 10 |
| (ii) | Assignments/Quiz/Activity (B) | 2 | 50% | 25 | 10 |
| Total Marks | | | | 50 | 20 |

Final CIE Marks = (A) + (B) Average

internal assessment shall be the average of the 2 test marks conducted.

CIE methods /question paper is designed to attain the different levels of Bloom's taxonomy as per the outcome defined for the course.

Semester End Examination:

Theory SEE will be conducted as per the scheduled timetable, with common question papers for the subject
(duration 03 hours)

1. Question paper pattern will be ten questions. Each question is set for 20marks. The medium of the question paper shall be English unless otherwise it is mentioned.
2. There shall be 2 question from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have mix of topics under that module if necessary.
3. The students have to answer 5 full questions selecting one full question from each module.
4. Marks scored will be proportionally scaled down to 50 marks

7. Learning Objectives

| S/L | Learning Objectives | Description |
|-----|--|---|
| 1 | Understanding Blockchain Technology Fundamentals | Students will grasp the fundamental concepts of blockchain and it's decentralized way of function, including smart contracts, cryptocurrencies, non-crypto blockchains |
| 2 | Developing blockchain applications | Students will learn to develop and implement blockchain applications, smart contracts and for real world scenarios using programming languages like python. |
| 3 | Project-Based Learning | Through hands-on projects, students will apply their knowledge of blockchain to design, develop and implement blockchain applications, reinforcing their understanding of theoretical concepts |
| 4 | Collaboration and Communication Skills | Students will work collaboratively in teams on design projects, enhancing their ability to communicate effectively, share ideas, and solve problems collectively. |
| 5 | Ethical and Professional Responsibility | Students will understand the ethical and professional responsibilities associated with blockchain technology, including transparency and compliance with regulations, cautious and strategic approach to managing risks associated with cryptocurrency investments and trading, best practices for securing blockchain networks and applications. |

8. Course Outcomes (COs) and Mapping with POs/ PSOs

Course Outcomes (COs)

| COs | Description |
|---------------------|--|
| M23BCS603A.1 | Explain fundamentals of blockchain and how it works. |
| M23BCS603A.2 | Implement security measures through cryptographic principles. |
| M23BCS603A.3 | Describe fundamentals of cryptocurrencies and their role in economics. |
| M23BCS603A.4 | Analyse and demonstrate the Ethereum. |
| M23BCS603A.5 | Analyse and demonstrate Hyperledger fabric. |

CO-PO-PSO Mapping

| COs/POs | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 | PSO1 | PSO2 |
|---------------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|------|------|
| M23BCS603A.1 | 3 | - | - | - | - | - | - | - | - | - | - | - | 3 | 3 |
| M23BCS603A.2 | - | 3 | - | - | - | - | - | - | - | - | - | - | 3 | 3 |
| M23BCS603A.3 | - | - | 3 | - | - | - | - | - | - | - | - | - | 3 | 3 |
| M23BCS603A.4 | 3 | - | - | - | - | - | - | - | - | - | - | - | 3 | 3 |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| Module 5 | | | | | 20 | 20 |
| Total | 20 | 20 | 20 | 20 | 20 | 100 |

Conditions for SEE Paper Setting:

Each module of SEE question paper should be allocated with questions for 20% of the total SEE marks

10. Future with this Subject

The "Blockchain Technology" course in the seventh semester of the B.E program lays a strong foundation for several future opportunities in the industry. The contributions of this subject extend across various areas, enhancing the students' understanding and skills in the field of Blockchain and Cryptocurrencies. Here are some notable contributions:

- **Enhanced Security and Transparency:** Blockchain's decentralized nature ensures that data is secure and transparent, reducing the risk of fraud and tampering. In supply chain management, companies are using blockchain to track the journey of products from origin to consumer, ensuring authenticity and reducing counterfeiting.
- **Decentralized Finance (DeFi):** DeFi platforms are revolutionizing traditional financial systems by providing decentralized financial services without intermediaries.
- **Integration with Emerging Technologies:** Blockchain is being integrated with other emerging technologies like Artificial Intelligence (AI) and the Internet of Things (IoT) to create innovative solutions.
- **Enterprise Adoption:** More enterprises are adopting blockchain technology to improve efficiency, reduce costs, and enhance security. Companies like Walmart and Maersk are using blockchain for supply chain management, while financial institutions are exploring blockchain for secure and transparent transactions.
- **Regulatory Developments:** As blockchain technology matures, regulatory frameworks are evolving to provide clearer guidelines and foster innovation. Governments are exploring Central Bank Digital Currencies (CBDCs) to leverage blockchain for secure and efficient digital currencies.
- **Non-Fungible Tokens (NFTs):** NFTs are expanding beyond digital art to include various applications such as virtual real estate, gaming, and intellectual property. Platforms like Decentraland and Axie Infinity use NFTs to create virtual worlds and gaming ecosystems where users can own and trade digital assets.

| | | |
|--------------------------|--|------------|
| 6 th Semester | PROFESSIONAL ELECTIVE-II(PE) COMPUTER VISION | M23BCS603B |
|--------------------------|--|------------|

1. Prerequisites

| S/L | Proficiency | Prerequisites |
|-----|------------------------|--|
| 1 | Mathematics | Linear Algebra: Understanding of vectors, matrices, eigenvalues, and eigenvectors, which are fundamental in image transformations, camera models, and feature detection. Calculus: Proficiency in differential calculus for understanding optimization in machine learning models, as well as the image brightness constancy equation. Probability and Statistics: Basic concepts to understand statistical filtering, robust estimation, and error modelling. |
| 2 | Basic Algorithm Design | Familiarity with algorithm design principles, data structures (e.g., arrays, lists, trees, graphs), and complexity analysis. |
| 3 | Programming | Familiarity with Python, including libraries like NumPy, OpenCV, and Matplotlib for image processing tasks. |
| 4 | Fourier Transforms | Understanding of Fourier transforms and their applications in signal processing. |
| 5 | Basic Image Processing | Prior exposure to image processing techniques such as filtering, convolution, and Fourier transforms. This will help students grasp the more advanced concepts covered in the course |

2. Competencies

| S/L | Competency | KSA Description |
|-----|--|---|
| 1 | Overview of Computer Vision and Its Applications | Knowledge: Understanding the fundamentals of imaging geometry, radiometry, digitization, camera models, and projection techniques. Skills: Ability to apply concepts from linear algebra and calculus to understand imaging geometry and transformations. Attitudes: Eagerness to explore the foundational aspects of computer vision and understand the underlying principles of image formation and processing. |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|---|---|---|
| 2 | Feature Detection and Segmentation | <p>Knowledge: Feature Detection: Understanding of edge, corner, line, and curve detection techniques, along with descriptors like SIFT, HOG, and shape context. Segmentation Techniques: Familiarity with various segmentation methods such as active contours, split & merge, watershed, graph-based segmentation, and normalized cuts.</p> <p>Skills: Algorithm Development: Ability to implement and modify feature detection algorithms for specific tasks in computer vision.</p> <p>Attitudes: Precision: A meticulous approach to identifying and extracting features and segmenting images accurately.</p> |
| 3 | Camera Calibration | <p>Knowledge: In-depth understanding of camera models, including intrinsic and extrinsic parameters, radial lens distortion, and various projection techniques.</p> <p>Skills: Skill in calibrating cameras using calibration techniques and understanding the impact of different camera models on image acquisition.</p> <p>Attitudes: A critical approach to understanding and applying camera calibration techniques, ensuring accurate image acquisition.</p> |
| 4 | Motion Representation | <p>Knowledge: Understanding the motion field of rigid objects, motion parallax, optical flow, affine flow, and the image brightness constancy equation.</p> <p>Skills: Motion Analysis: Understanding the motion field of rigid objects, motion parallax, optical flow, affine flow, and the image brightness constancy equation.</p> <p>Attitudes: A proactive approach to tackling challenges in motion representation and finding innovative solutions.</p> |
| 5 | Motion Tracking and Object Recognition | <p>Knowledge: Understanding of statistical filtering, iterated estimation, Kalman filters, and their applications in motion tracking.</p> <p>Skills: Ability to develop and implement motion tracking algorithms using statistical filtering and estimation techniques.</p> <p>Attitudes: A commitment to achieving high accuracy in motion tracking and object recognition tasks.</p> |

3. Syllabus

| COMPUTER VISION SEMESTER – VI | | | |
|--|-------------------|-------------|------------|
| Course Code | M23BCS603B | CIE Marks | 50 |
| Number of Lecture Hours/Week(L: T: P: S) | (3:0:0:0) | SEE Marks | 50 |
| Total Number of Lecture Hours | 40 Hours | Total Marks | 100 |
| Credits | 03 | Exam Hours | 03 |

| | |
|---|--|
| Course Objectives: | |
| <ol style="list-style-type: none"> 1. Learn how digital images are formed, represented, and processed using techniques like filtering and transformations. 2. Understand and apply methods to identify edges, corners, and other features, as well as divide images into meaningful regions. 3. Acquire skills to set up cameras accurately and use their parameters to rebuild three-dimensional scenes from images. 4. Study techniques to represent movement in images and implement methods to follow moving objects over time. 5. Explore and apply approaches to identify objects within images and describe their shapes effectively. | |
| Module -1 | |
| <p>Overview of computer vision and its applications: Image Formation and Representation: Imaging geometry, radiometry, digitization, cameras and Projections, rigid and affine transformation</p> <p>Image Processing: Pixel transforms, color transforms, histogram processing, histogram equalization, filtering, convolution, Fourier transformation and its applications in sharpening, blurring and noise removal.</p> | |
| Module -2 | |
| <p>Feature detection: edge detection, corner detection, line and curve detection, active contours, SIFT and HOG descriptors, shape context descriptors, Morphological operations.</p> <p>Segmentation: Active contours, split & merge, watershed, region splitting, region merging, graph-based segmentation, mean shift and model finding, Normalized cut.</p> | |
| Module -3 | |
| <p>Camera calibration: camera models; intrinsic and extrinsic parameters; radial lens distortion; direct parameter calibration; camera parameters from projection matrices; orthographic, weak perspective, affine, and perspective camera models.</p> | |
| Module -4 | |
| <p>Motion representation: the motion field of rigid objects; motion parallax; optical flow, the image brightness constancy equation, affine flow; differential techniques; feature-based techniques; regularization and robust estimation</p> | |
| Module -5 | |
| <p>Motion tracking: statistical filtering; iterated estimation; observability and linear systems; the Kalman filter.</p> <p>Object recognition and shape representation: alignment, appearance-based methods, invariants, image eigenspaces</p> | |
| Text Books: | |
| <ol style="list-style-type: none"> 1. Computer Vision: Algorithms and Applications, R. Szeliski, Springer, 2011. 2. Introductory techniques for 3D computer vision, E. Trucco and A. Verri, Prentice Hall, 1998. | |
| Reference Books: | |
| <ol style="list-style-type: none"> 1. Computer Vision: Algorithms and Applications, Richard Szeliski 2. Multiple View Geometry in Computer Vision, Richard Hartley and Andrew Zisserman | |

4. Syllabus Timeline

| S/L | Syllabus Timeline | Description |
|-----|-------------------|---|
| 1 | Week 1-3: | <p>Overview of computer vision and its applications: Image Formation and Representation: Imaging geometry, radiometry, digitization, cameras and Projections, rigid and affine transformation</p> <p>Image Processing: Pixel transforms, color transforms, histogram processing, histogram equalization, filtering, convolution, Fourier transformation and its applications in sharpening, blurring and noise removal.</p> |
| 2 | Week 4-6: | <p>Feature detection: edge detection, corner detection, line and curve detection, active contours, SIFT and HOG descriptors, shape context descriptors, Morphological operations.</p> <p>Segmentation: Active contours, split & merge, watershed, region splitting, region merging, graph-based segmentation, mean shift and model finding, Normalized cut.</p> |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|----------|------------|---|
| 3 | Week 8-11: | Camera calibration: camera models; intrinsic and extrinsic parameters; radial lens distortion; direct parameter calibration; camera parameters from projection matrices; orthographic, weak perspective, affine, and perspective camera models. |
| 4 | Week 7-8: | Motion representation: the motion field of rigid objects; motion parallax; optical flow, the image brightness constancy equation, affine flow; differential techniques; feature-based techniques; regularization and robust estimation |
| 5 | Week 9-12: | Motion tracking: statistical filtering; iterated estimation; observability and linear systems; the Kalman filter. Object recognition and shape representation: alignment, appearance-based methods, invariants, image eigenspaces |

5. Teaching-Learning Process Strategies

| S/L | TLP Strategies: | Description |
|-----|-----------------------------|---|
| 1 | Interactive Lectures | Use lectures to introduce key concepts in computer vision, image processing, and motion analysis. Ensure that each lecture includes visual aids, diagrams, and realworld examples to illustrate complex ideas. |
| 2 | Hands-on Labs and Workshops | Conduct lab sessions where students can apply theoretical knowledge by coding and experimenting with image processing algorithms, feature detection techniques, and camera calibration tasks using Python and relevant libraries. |
| 3 | Collaborative Learning | Group Projects: Assign group projects where students work together to solve complex computer vision problems, encouraging peer-to-peer learning and collaboration. |
| 4 | Problem-Based Learning | Real-World Case Studies: Introduce problem-based learning by presenting students with real-world case studies that require them to apply computer vision techniques to solve practical problems. |

6. Assessment Details (both CIE and SEE) Continuous Internal Evaluation:

This section of regulations is applicable to all theory-based courses. The minimum CIE marks requirement is 40% of maximum marks in each component.

CIE Split up for Professional Elective Course (PE)

| Components | | Number | Weightage | Max. Marks | Min. Marks |
|-------------------|-------------------------------|--------|-----------|------------|------------|
| (i) | Internal Assessment-Tests (A) | 2 | 50% | 25 | 10 |
| (ii) | Assignments/Quiz/Activity (B) | 2 | 50% | 25 | 10 |
| TotalMarks | | | | 50 | 20 |

FinalCIE Marks =(A) + (B) Average

internal assessment shall be the average of the 2 test marks conducted.

Semester End Examinations:

Theory Course with 4, 3 and 2 Credits: Professional Core Course (PC)/Professional Elective/Open Elective

1. Question paper pattern will be ten questions. Each question is set for 20marks. The medium of the question

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

paper shall be English unless otherwise it is mentioned.

2. There shall be 2 question from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have mix of topics under that module if necessary.

3. The students have to answer 5 full questions selecting one full question from each module.

1. Marks scored will be proportionally scaled down to 50 marks

7. Learning Objectives

| S/L | Learning Objectives | Description |
|-----|---|--|
| 1 | Understand Image Formation and Processing Techniques | Students will be able to explain the principles of image formation, representation, and processing, including key techniques like filtering, convolution, and Fourier transformation. |
| 2 | Apply Feature Detection and Segmentation Methods | Students will demonstrate the ability to implement and apply various feature detection and image segmentation methods to extract and analyse meaningful information from images. |
| 3 | Calibrate Cameras and Perform 3D Reconstruction | Students will acquire the skills to calibrate cameras, understand intrinsic and extrinsic parameters, and use projection techniques for accurate 3D scene reconstruction. |
| 4 | Analyse and Represent Motion in Images | Students will learn to analyse and represent motion in images and videos using techniques like optical flow, motion parallax, and differential methods, understanding the principles behind motion tracking. |
| 5 | Implement Motion Tracking and Object Recognition Systems | Students will be able to develop and implement systems for motion tracking and object recognition using statistical filtering, Kalman filters, and appearance-based methods. |
| 6 | Integrate Theoretical Knowledge with Practical Applications | Students will integrate their understanding of computer vision concepts with practical applications, solving real-world problems through hands-on projects and case studies. |

8. Course Outcomes (COs) and Mapping with POs/ PSOs

Course Outcomes (COs)

| COs | Description |
|---------------------|--|
| M23BCS603B.1 | Apply image processing techniques like filtering and convolution to enhance and modify digital images. |
| M23BCS603B.2 | Analyse and evaluate feature detection and segmentation methods to extract important features and divide images into meaningful regions. |
| M23BCS603B.3 | Calibrate cameras and reconstruct 3D scenes from 2D images using projection techniques. |
| M23BCS603B.4 | Evaluate the effectiveness of motion analysis and tracking systems by critically analysing the application of techniques like optical flow and motion parallax in various scenarios. |
| M23BCS603B.5 | Design and create object recognition systems that accurately identify and classify objects in different environments. |

CO-PO-PSO Mapping

10.Future with this Subject

Revolutionizing Autonomous Vehicles:

As self-driving technology advances, computer vision specialists will play a critical role in developing and refining the visual systems that enable vehicles to navigate roads safely and efficiently, making autonomous transportation more reliable and widespread.

Transforming Healthcare with Advanced Diagnostics:

Computer vision will drive innovations in medical imaging, enabling more accurate and automated diagnoses through techniques like automated tumour detection and real-time monitoring of patient conditions, leading to improved patient outcomes and personalized treatments.

Enhancing Augmented and Virtual Reality Experiences:

Experts in computer vision will contribute to creating more immersive and interactive AR and VR environments by improving object recognition, gesture tracking, and environmental mapping, enriching experiences in gaming, training, and education.

Advancing Security and Surveillance Technologies:

Computer vision will enhance security systems through improved facial recognition, anomaly detection, and automated monitoring, leading to more effective crime prevention and public safety measures.

Innovating Robotics and Automation:

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

The integration of computer vision into robotics will lead to smarter, more capable robots that can perform complex tasks in manufacturing, healthcare, and service industries, driving automation and increasing efficiency across various sectors.

Developing Smart Cities and IoT Solutions:

Computer vision will be pivotal in building smart cities by providing advanced solutions for traffic management, environmental monitoring, and urban planning, leading to more connected, efficient, and sustainable urban environments.

1. Prerequisites

| S/L | Proficiency | Prerequisites |
|-----|---|---|
| 1 | Programming Fundamentals | Proficiency in at least one programming language (e.g., C, C++, Java) is essential. This includes understanding data structures (like arrays, linked lists, trees), algorithms, and basic programming concepts. |
| 2 | Basic Knowledge of Linear Algebra | Understanding of vectors, matrices, matrix multiplication, and other fundamental linear algebra concepts. |
| 3 | Formal Languages and Automata Theory | Knowledge of finite automata, regular expressions, context-free grammars, and pushdown automata. |
| 4 | Syntax and Semantics | Understanding of syntax (how code is structured) and semantics (the meaning of code) of programming languages. |
| 5 | Operating Systems | Concepts such as process management, memory management, and file systems can be beneficial. |
| 6 | Modular Design | Knowledge of designing software in a modular and maintainable way, which is crucial for building complex systems like compilers. |

2. Competencies

| S/L | Competency | KSA Description |
|-----|------------|-----------------|
|-----|------------|-----------------|

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|---|--------------------------|--|
| 1 | Introduction: | <p>Knowledge:</p> <ul style="list-style-type: none"> Understanding why compilers are needed and what they do (e.g., translating high-level code to machine code). <p>Skills:</p> <ul style="list-style-type: none"> Skills in analyzing and designing algorithms and data structures for tasks such as parsing and optimization. Familiarity with tools like Lex (for lexical analysis) and Yacc/Bison (for parsing). <p>Attitudes:</p> <ul style="list-style-type: none"> Ability to adapt to new methods, tools, and languages as you dive deeper into compiler design. Recognizing that compiler design can be intricate and requires thorough testing and debugging. |
| 2 | Lexical Analysis: | <p>Knowledge:</p> <ul style="list-style-type: none"> Understanding what lexical analysis is and why it's essential for compiler design. It involves scanning the input source code and breaking it into tokens. Knowledge of various types of tokens (e.g., keywords, operators, identifiers) and their typical patterns in programming languages. <p>Skills:</p> <ul style="list-style-type: none"> Ability to write code for lexical analysis, including implementing tokenization logic and using tools like Lex or Flex. Ability to implement mechanisms for detecting and reporting lexical errors, including providing meaningful error messages. <p>Attitudes:</p> <ul style="list-style-type: none"> Approach problems methodically, breaking down the task of tokenization into manageable components. Willingness to iteratively test and refine your lexical analyzer to handle all expected and edge-case inputs. |
| 3 | Syntax Analysis: | <p>Knowledge:</p> <ul style="list-style-type: none"> Understanding the role of syntax analysis in translating source code into a parse tree or abstract syntax tree (AST), and its importance in ensuring code conforms to grammatical rules. <p>Skills:</p> |

| | | |
|---|--------------------------------------|---|
| | | <ul style="list-style-type: none"> Ability to write and implement parsers using different techniques (e.g., recursive descent, table-driven parsers). Skills in designing meaningful error messages and handling syntax errors gracefully. <p>Attitudes:</p> <ul style="list-style-type: none"> Recognizing the importance of precise grammar definitions and the potential impact of small errors in syntax rules. Ability to adapt to different programming languages and their specific syntactic rules when designing or using parsers. |
| 4 | Syntax directed translation: | <p>Knowledge:</p> <ul style="list-style-type: none"> Familiarity with the concept of attributed grammars, where grammar rules are augmented with attributes and semantic functions. Knowledge of how intermediate representations are translated into target code and the role of syntax-directed translation in this process. <p>Skills:</p> <ul style="list-style-type: none"> Proficiency with tools and frameworks that support syntax-directed translation, such as parser generators (Yacc/Bison, ANTLR) and compiler construction kits. <p>Attitudes:</p> <ul style="list-style-type: none"> Ability to approach translation problems methodically, breaking down complex syntax and semantic issues into manageable components. |
| 5 | Intermediate Code Generation: | <p>Knowledge:</p> <ul style="list-style-type: none"> Knowledge of different forms of IR, such as abstract syntax trees (ASTs), three-address code (TAC), and intermediate languages (e.g., LLVM IR). Understanding of control flow graphs (CFGs) and their role in representing the flow of control within a program. <p>Skills:</p> <ul style="list-style-type: none"> Ability to implement code that generates intermediate representations from high-level source code. Skills in selecting appropriate low-level instructions and mapping intermediate code to these instructions. <p>Attitudes:</p> <ul style="list-style-type: none"> Recognizing the importance of precise IR generation and optimization to ensure correct and efficient target code. Keeping up with new methods and best practices in intermediate code generation and optimization. |

3. Syllabus

| COMPILER DESIGN SEMESTER – VI | | | |
|---|-------------------|-------------|------------|
| Course Code | M23BCS603C | CIE Marks | 50 |
| Number of Lecture Hours/Week(L: T: P: S) | (3:0:0:0) | SEE Marks | 50 |
| Total Number of Lecture Hours | 40 Hours | Total Marks | 100 |
| Credits | 03 | Exam Hours | 03 |
| <p>Course Objectives:</p> <ol style="list-style-type: none"> To teach concepts of language translation and phases of compiler design. To describe the common forms of parsers. To inculcate knowledge of parser by parsing LL parser and LR parser. To demonstrate intermediate code using technique of syntax directed translation. | | | |
| Module -1 | | | |

| |
|--|
| Introduction : Language processors; The structure of a Compiler; The evolution programming languages; The science of building a Compiler; Applications of compiler technology; Programming language basics. |
| Module -2 |
| Lexical analysis: The Role of Lexical Analyzer; Input Buffering; Specifications of Tokens; Recognition of Tokens.lexical analyzer generator, Finite automate. |
| Module -3 |
| Syntax Analysis: Introduction, Role Of Parsers, Context Free Grammars, Writing a grammar, Top Down Parsers, Bottom-Up Parsers |
| Module -4 |
| Syntax-Directed Translation: Syntax-directed definitions; Evaluation orders for SDDs; Applications of syntaxdirected translation; Syntax-directed translation schemes. |
| Module -5 |
| Intermediate Code Generation: Variants of syntax trees; Three-address code; Translation of expressions; Control flow; Back patching; Switchstatements; Procedure calls. |
| TEXT BOOKS: <ol style="list-style-type: none"> 1. Compilers-Principles, Techniques and Tools by Alfred V Aho, Monica S. Lam, Ravi Sethi, Jeffrey D. Ullman. Pearson, 2nd edition, 2007 2. Dhamdhare, D. M., "Compiler Construction Principles and Practice", 2nd edition, Macmillan India Ltd., New Delhi, 2008 |
| Reference Books: <ol style="list-style-type: none"> 1. Kenneth C. Louden, "Compiler Construction: Principles and Practice", Thompson Learning, 2003 2. Andrew W. Appel (2004), Modern Compiler Implementation C, Cambridge University Press, UK. |

4. Syllabus Timeline

| S/L | Syllabus Timeline | Description |
|-----|---|--|
| 1 | Week 1-3: Introduction | Language processors; The structure of a Compiler; The evolution programming languages; The science of building a Compiler; Applications of compiler technology; Programming language basics. |
| 2 | Week 4-6: Lexical analysis | The Role of Lexical Analyzer; Input Buffering; Specifications of Tokens; Recognition of Tokens.lexical analyzer generator, Finite automate. |
| 3 | Week 7-8: Syntax Analysis | Introduction, Role Of Parsers, Context Free Grammars, Writing a grammar, Top Down Parsers, Bottom-Up Parsers |
| 4 | Week 9-11: Syntax-Directed Translation | Syntax-directed definitions; Evaluation orders for SDDs; Applications of syntaxdirected translation; Syntax-directed translation schemes. |
| 5 | Week 12-13 : Intermediate Code Generation | Variants of syntax trees; Three-address code; Translation of expressions; Control flow; Back patching; Switchstatements; Procedure calls. |

5. Teaching-Learning Process Strategies

| S/L | TLP Strategies: | Description |
|-----|-----------------|--|
| 1 | Lecture Method | Utilize various teaching methods within the lecture format to reinforce competencies. |
| 2 | Video/Animation | Incorporate visual aids like videos/animations to enhance understanding of the compiler design concepts. |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|---|-------------------------|---|
| 3 | Collaborative Learning | Encourage collaborative learning for improved competency application. |
| 4 | Real-World Application | Discuss practical applications to connect theoretical concepts with real-world competencies. |
| 5 | Flipped Class Technique | Utilize a flipped class approach, providing materials before class to facilitate deeper understanding of competencies |
| 6 | Laboratory Learning | Utilize the facilities available in the laboratories to understand the behavior of the materials by performing few experiments. |

6. Assessment Details (both CIE and SEE) Continuous Internal Evaluation:

The minimum CIE marks requirement is 40% of maximum marks in each component.

CIE Split up

| Components | | Number | Weightage | Max. Marks | Min. Marks |
|--------------------|--------------------------------|--------|-----------|------------|------------|
| (i) | Internal Assessment-Tests (A) | 2 | 50% | 25 | 10 |
| (ii) | Assignments/Quiz/ Activity (B) | 2 | 50% | 25 | 10 |
| Total Marks | | | | 50 | 20 |

Final CIE Marks = (A) + (B) Average

internal assessment shall be the average of the 2 test marks conducted.

Semester End Examination:

1. Question paper pattern will be ten questions. Each question is set for 20 marks. The medium of the question paper shall be English unless otherwise it is mentioned.
2. There shall be 2 question from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have mix of topics under that module if necessary.
3. The students have to answer 5 full questions selecting one full question from each module.
4. Marks scored will be proportionally scaled down to 50 marks

7. Learning Objectives

| S/L | Learning Objectives | Description |
|-----|------------------------------|---|
| 1 | Introduction | Gain a clear understanding of what a compiler is, why it is needed, and how it fits into the process of translating high-level source code into executable machine code. |
| 2 | Lexical analysis | Gain practical skills in implementing lexical analyzers to recognize and process tokens from source code. |
| 3 | Syntax analysis | Grasp the significance of syntax analysis in the compilation process, including its role in ensuring that source code adheres to the grammatical rules of the programming language. |
| 4 | Syntax directed translation | Understand how syntax-directed definitions and attributed grammars are used to associate semantic rules with syntax rules. |
| 5 | Intermediate code generation | Learn how intermediate code is generated from the syntax-directed translation process and its role in the compilation pipeline.. |

8. Course Outcomes (COs) and Mapping with POs/ PSOs

Course Outcomes (COs)

| Cos | Description |
|---------------------|--|
| M23BCS603C.1 | Apply knowledge of different phases and passes of the compiler |
| M23BCS603C.2 | Analyse formal languages for creating regular expressions to define token patterns |
| M23BCS603C.3 | Construct the intermediate representation considering the type systems |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | | | | |
|--------------|-----------|-----------|-----------|-----------|-----------|
| Module 3 | | 7 | 6 | | 13 |
| Module 4 | | | 6 | 7 | 13 |
| Module 5 | | | | 6 | 6 |
| Total | 12 | 13 | 12 | 13 | 50 |

| | |
|---------------------|---|
| M23BCS603C.4 | Design and implement different types of parsers i.e. Top-Down and Bottom-up parsers and construct LL, SLR, CLR, and LALR parsing table. |
|---------------------|---|

CO-PO-PSO Mapping

| COs/POs | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 | PSO1 | PSO2 |
|---------------------|----------|----------|----------|----------|-----|-----|-----|-----|-----|------|------|------|----------|----------|
| M23BCS603C.1 | 3 | - | - | - | - | - | - | - | - | - | - | - | 3 | 3 |
| M23BCS603C.2 | - | 3 | - | - | - | - | - | - | - | - | - | - | 3 | 3 |
| M23BCS603C.3 | - | - | 3 | - | - | - | - | - | - | - | - | - | 3 | 3 |
| M23BCS603C.4 | - | - | - | 3 | - | - | - | - | - | - | - | - | 3 | 3 |
| M23BCS603C | 3 | 3 | 3 | 3 | - | - | - | - | - | - | - | - | 3 | 3 |

9. Assessment Plan

Continuous Internal Evaluation (CIE)

| | CO1 | CO2 | CO3 | CO4 | Total |
|----------|-----|-----|-----|-----|-------|
| Module 1 | 6 | | | | 6 |
| Module 2 | 6 | 6 | | | 12 |

Semester End Examination (SEE)

| | CO1 | CO2 | CO3 | CO4 | CO5 | Total |
|--------------|-----------|-----------|-----------|-----------|-----------|------------|
| Module 1 | 20 | | | | | 20 |
| Module 2 | | 20 | | | | 20 |
| Module 3 | | | 20 | | | 20 |
| Module 4 | | | | 20 | | 20 |
| Module 5 | | | | | 20 | 20 |
| Total | 20 | 20 | 20 | 20 | 20 | 100 |

10. Future with this Subject

1. Advanced Optimization Techniques

- **Machine Learning and AI:** Leveraging machine learning and artificial intelligence to improve optimization strategies, such as predicting optimal code transformations or automating performance tuning.
- **Adaptive Optimization:** Developing compilers that adapt to runtime information and dynamically optimize code based on real-time performance metrics.

2. Integration with Modern Hardware Architectures

- **Heterogeneous Computing:** Designing compilers to efficiently target heterogeneous computing environments, including CPUs, GPUs, TPUs, and other accelerators.
- **Customizable Architectures:** Supporting new and customizable hardware architectures, such as domain-specific processors and reconfigurable hardware (FPGAs).

3. Support for New Programming Paradigms

- **Parallel and Concurrent Programming:** Enhancing compilers to better support parallelism and concurrency, including automatic parallelization and synchronization.

- **Domain-Specific Languages (DSLs):** Creating compilers that efficiently handle DSLs tailored for specific applications, such as data science, machine learning, or graphics.

4. Increased Focus on Security

- **Security-Oriented Optimizations:** Incorporating security considerations into optimization strategies to mitigate vulnerabilities such as buffer overflows, side-channel attacks, and other exploits.
- **Secure Compilation Practices:** Developing techniques for producing secure code, including tools for detecting and mitigating vulnerabilities during the compilation process.

| | | |
|--------------------------|---|-------------------|
| 6 th Semester | Professional Elective -II (PE) SOCIAL NETWORK ANALYSIS | M23BCS603D |
|--------------------------|---|-------------------|

1. Prerequisites

| S/L | Proficiency | Prerequisites |
|-----|------------------------------|---|
| 1 | Mathematics | Graph Theory: Understanding concepts like nodes, edges, paths, and centrality measures (e.g., degree centrality, closeness centrality). Probability: Basics of probability theory can be useful for understanding stochastic processes in networks. |
| 2 | Statistical | Proficiency in statistical methods to analyse network data, including descriptive statistics, hypothesis testing, and regression analysis. |
| 3 | Computational | Programming: Familiarity with programming languages such as Python, R, or Java is important for implementing SNA algorithms and processing data. |
| 4 | Data Handling and Management | Data Collection: Skills in collecting and cleaning data from various sources, including social media, surveys, or databases. |
| 5 | Structural Analysis: | Basic Concepts: Understanding fundamental graph theory concepts such as types of networks (e.g., directed, undirected, weighted) and network metrics (e.g., clustering coefficient, network density). Advanced Metrics: Knowledge of more advanced metrics like community detection, network robustness, and dynamic network analysis. |
| 6 | Data Interpretation: | Visualization: Ability to create and interpret network visualizations to identify patterns, clusters, and outliers. Statistical Analysis: Skills in applying statistical techniques to validate network findings and draw meaningful conclusions. |
| 7 | Practical Application | Case Studies: Experience with real-world data and case studies to understand practical challenges and solutions in network analysis. |

2. Competencies

| S/L | Competency | KSA Description |
|-----|-----------------------------------|--|
| 1 | Introduction | Knowledge: Semantic Web principles and technologies, Social Web concepts and platforms, Network analysis methodologies Key concepts in social network analysis. Skills: Web development basics, Data mining and analysis Use of network analysis tools Attitudes: Attention to detail in calculations and diagrams. Persistence in analyzing complex load scenarios. |
| 2 | Modeling and visualization | Knowledge: Graph theory fundamentals Social network analysis principles, Data visualization techniques Centrality measures in network analysis Skills: Implementing graph algorithms Creating and interpreting node-edge diagrams Developing matrix-based network representations, Designing hybrid network visualizations Attitudes: Analytical mind set for interpreting complex network structures Curiosity about social dynamics and their digital representations |

| | | |
|---|---|---|
| 3 | Extraction and mining communities in web social networks | Knowledge: Definitions of social network structures and dynamics Familiarity with community detection algorithms Knowledge of web archiving techniques and formats Understanding of multi-relational and dynamic network models Awareness of decentralized online social networks Grasp of evaluation metrics for community detection. |
| | | Skills: Proficiency in programming languages (e.g., Python, R) Experience with network analysis tools (e.g., Network, Gephi) Ability to implement and adapt community detection algorithms Data pre-processing and cleaning Attitudes: Respect for user privacy and data protection. Ethical consideration in behaviour prediction and analysis Commitment to transparency in data collection and use Proactive approach to security and trust issues Curiosity about human behaviour and social dynamics Openness to interdisciplinary approaches |
| 4 | Predicting behaviour and issues | Knowledge: Data management principles and techniques Statistical inference and distribution methods Reality mining concepts and applications Context-awareness in social computing Privacy concepts and regulations in online environments Skills: human Data collection and analysis Predictive modelling of human behaviour Designing privacy-preserving systems Implementing trust models and algorithms privacy Attitudes: Trust in online environment – Trust models based on subjective logic – Trust network analysis – Trust transitivity analysis – Combining trust and reputation – Trust derivation based on trust comparisons – Attack spectrum and counter measures. |
| 5 | Application | Knowledge: Machine learning algorithms and techniques Linguistic analysis methods, Emotion classification models Social media data structures and APIs, Emerging technology trends Skills: Programming (e.g., Python, R) Statistical analysis and Data visualization Model development and evaluation, API integration and Network graph analysis. Attitudes: It is use for Commitment to data security. |

3. Syllabus

| SOCIAL NETWORK ANALYSIS SEMESTER – VI | | | |
|---|-------------------|-------------|------------|
| Course Code | M23BCS603D | CIE Marks | 50 |
| Number of Lecture Hours/Week(L: T: P: S) | (3:0:0:0) | SEE Marks | 50 |
| Total Number of Lecture Hours | 40 Hours | Total Marks | 100 |
| Credits | 03 | Exam Hours | 03 |
| Course Objectives: <ol style="list-style-type: none"> 1. Ability to understand the fundamental concepts and applications of social network analysis 2. Ability to model and visualize the social network 3. Ability to extract and Mine Communities in Web Social Networks 4. Ability to evaluate link prediction techniques and cascade models to predict network behavior and changes. 5. Ability to analyze anomaly detection techniques to identify and address malicious activities in networks. | | | |
| Module -1 | | | |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| |
|--|
| <p>Networks and Society , What is Social Network Analysis?, Why do We Study Social Networks? Applications of Social Network Analysis, Preliminaries, Three Levels of Social Network Analysis ,Graph Visualization Tools, Network Measures, Network Basics, Node Centrality, Assortativity ,Transitivity and Reciprocity, Similarity, Degeneracy Text Book1:Chapter 1 ,2</p> |
| Module -2 |
| <p>Network Growth Models, Properties of Real-World Networks, Random Network Model, Ring Lattice Network Model, Watts–Strogatz Model, Preferential Attachment Model, Price’s Model, Local-world Network Growth Model, Network Model with Accelerating Growth, Aging in Preferential Attachment, Link Analysis, Applications of Link Analysis, Signed Networks, Strong and Weak Ties, Link Analysis Algorithms, PageRank, Personalised PageRank, DivRank, SimRank, PathSIM Text Book1:Chapter 3 ,4</p> |
| Module -3 |
| <p>Community Structure in Networks, Applications of Community Detection, Types of Communities, Community Detection Methods, Disjoint Community Detection, Overlapping Community Detection, Local Community Detection, Community Detection vs Community Search, Evaluation of Community Detection Methods, Link Prediction, Applications of Link Prediction, Temporal Changes in a Network, Problem Definition Text Book1:Chapter 5 ,6.1,6.2,6.3</p> |
| Module -4 |
| <p>Evaluating Link Prediction Methods, Heuristic Models, Probabilistic Models, Supervised Random Walk, Information-theoretic Model, Latest Trends in Link Prediction, Cascade Behaviours and Network Effects , Preliminaries and Important Terminologies, Cascade Models, Case Study – The “Indignados” Movement , Probabilistic Cascades, Epidemic Models Independent Cascade Models, Cascade Prediction Text Book1:Chapter 6.4,6.5,6.6,6.7,6.8,6.9, Chapter7</p> |
| Module -5 |
| <p>Anomaly Detection in Networks, Outliers versus Network-based Anomalies, Challenges, Anomaly Detection in Static Networks, Anomaly Detection in Dynamic Networks Malicious Activities on OSNs, Sockpuppets in OSNs, Collusion on Online Social Networks Text Book1:Chapter 8,10.1,10.2,10.3</p> |

| 6 | Laboratory Learning | Knowledge about tools related to social networks and implementation of social network visualizations using tools such as Gephi, Cytoscape. |

6. Assessment Details (both CIE and SEE) Continuous Internal Evaluation:

The minimum CIE marks requirement is 40% of maximum marks in each component. **CIE Split up**

| Components | Number | Weightage | Max. Marks | Min. Marks |
|------------------------------------|--------|-----------|------------|------------|
| (i) Internal Assessment-Tests (A) | 2 | 50% | 25 | 10 |
| (ii) Assignments/Quiz/Activity (B) | 2 | 50% | 25 | 10 |
| Total Marks | | | 50 | 20 |

Final CIE Marks = (A) + (B)

Average internal assessment shall be the average of the 2 test marks conducted.

Semester End Examination:

1. Question paper pattern will be ten questions. Each question is set for 20 marks. The medium of the question paper shall be English unless otherwise it is mentioned.
2. There shall be 2 questions from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have mix of topics under that module if necessary.
3. The students have to answer 5 full questions selecting one full question from each module.
4. Marks scored will be proportionally scaled down to 50 marks

7. Learning Objectives

| S/L | Learning Objectives | Description |
|-----|--|--|
| 1 | Introduction | Web - Limitations of current Web – Development of Semantic Web – Emergence of the Social Web – Statistical Properties of Social Networks Analysis. |
| 2 | Modeling and visualization | Visualizing Online Social Networks - A Taxonomy of Visualizations - Graph Representation - Centrality- Clustering - Node-Edge Diagrams - Visualizing Social Networks with Matrix- Based Representations- Node-Link Diagrams |
| 3 | Extraction and mining communities in web social networks | Definition of community – Evaluating communities – Methods for community detection and mining – Applications of community mining algorithms – Tools for detecting communities social network infrastructures and communities |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|---|--|---|
| 4 | Predicting human behavior and privacy issues | Understanding and predicting human behaviour for social communities – User data management – Inference and Distribution – Enabling new human experiences – Reality mining – Context – Awareness – Privacy in online social networks – Trust in online environment |
| 5 | Application | A Learning Based Approach for Real Time Emotion Classification of Tweets, A New Linguistic Approach to Assess the Opinion of Users in Social Network Environments, |

8. Course Outcomes (COs) and Mapping with POs/ PSOs

Course Outcomes (COs)

| Cos | Description |
|---------------------|---|
| M23BCS603D.1 | Apply social network analysis techniques, including node centrality, assortativity, transitivity, and reciprocity, to analyse and interpret real-world networks. |
| M23BCS603D.2 | Identify different network growth models, link analysis algorithms, and community detection methods to analyze and solve real-world problems involving network structures, such as social networks, biological networks, and organizational systems |
| M23BCS603D.3 | Analyse link prediction methods and network effects, to interpret and examine the underlying patterns and dynamics in complex networks |
| M23BCS603D.4 | Analyse and evaluate anomaly detection techniques for static and dynamic networks, including challenges related to malicious activities and collusion in online social networks. |

CO-PO-PSO Mapping

10. Future with this Subject:

- † **Integration with Artificial Intelligence (AI):** AI and machine learning will continue to enhance SNA by providing more sophisticated tools for pattern recognition, predictive analytics, and automated insights. AI algorithms can identify trends, anomalies, and influence patterns that may not be apparent through traditional methods.
- † **Big Data and Real-Time Analysis:** With the growth of big data, SNA will increasingly leverage vast amounts of real-time data from social media platforms, communication networks, and other sources. This will enable more dynamic and timely analysis of social interactions and network structures.
- † **Enhanced Visualization Tools:** Advanced visualization techniques will allow for more intuitive and interactive representations of complex social networks. Tools that can effectively illustrate multidimensional relationships and evolving networks will improve our ability to understand and communicate findings.
- † **Integration with Other Disciplines:** SNA will benefit from integration with fields like psychology, sociology, and economics. Understanding social behaviour and dynamics in a more holistic context will improve the accuracy and relevance of network analyses.
- † **Privacy and Ethical Considerations:** As SNA tools become more powerful, there will be increasing focus on privacy and ethical concerns. Developing frameworks to ensure responsible data use, protect individuals' privacy, and address biases will be critical.
- † **Personalized Social Network Insights:** Advances in data analysis will enable more personalized insights into individual behaviours and relationships within networks. This could impact areas like targeted marketing, personalized recommendations, and tailored interventions.
- † **Block chain and Decentralized Networks:** Block chain technology and decentralized networks may offer new ways to analyze and visualize social interactions. These technologies could provide greater transparency and security in network analysis.
- † **Cross-Network Analysis:** Future SNA will likely involve the analysis of multiple interconnected networks, such as combining social networks with professional or academic networks. This can provide a more comprehensive understanding of individuals' roles and influence across different contexts.
- † **Increased Focus on Small-Scale Networks:** While much of SNA has focused on large-scale networks, there will be growing interest in understanding smaller, niche networks, including those within organizations or specific communities.
- † **Advancements in Data Collection Methods:** New methods for data collection, such as sensors, wearables, and automated scraping tools, will provide richer and more diverse datasets for analysis, enhancing the depth and accuracy of social network insights.

|-----------------------------|---|------------|
| 6 th Semester | Open elective -I Programming in Java | M23BCS604A |
|-----------------------------|---|------------|

1. Prerequisites

| S/L | Proficiency | Prerequisites |
|-----|--|--|
| 1 | Basic Programming Concepts | Understanding the use of variables to store data and understand basic data types like integers, floats, characters, and strings. The use of control structures and Understand how to define and call functions or methods, including parameters and return values. |
| 2 | Understanding of Object-Oriented Programming (OOP) | Understanding to define classes and create objects in Java and how inheritance allows one class to inherit fields and methods from another. Getting familiar with method overriding and overloading. Learning how to use access modifiers to protect data and ensure a class's internal representation is hidden from the outside. |
| 3 | Basic Knowledge of Java Syntax and Semantics | Understanding the Java-specific syntax and basic error handling using exceptions. |
| 4 | Development Tools and Environment | Choosing an IDE or text editor suitable for Java development, such as IntelliJ IDEA, Eclipse, or NetBeans. Learning the usage of the IDE for coding, debugging, and managing your projects. The JDK provides the necessary tools for compiling and running Java programs. |
| 5 | Understanding of Compilation and Execution | Understanding the difference between source code and bytecode. Understand the process of compiling Java code into bytecode and running it on the Java Virtual Machine (JVM). |

2. Competencies

| S/L | Competency | KSA Description |
|-----|--------------------|--|
| 1 | Core Java Concepts | Knowledge: Proficiency with Java syntax, including how to write correct and efficient code using Java's syntax rules. Skills: Learning the basic concepts of primitive data types in java. Attitude: Fundamental to understanding the language and its capabilities. |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|----------|---|---|
| 2 | Object-Oriented Programming | Knowledge: Ability to define and instantiate classes and objects. Understanding method overloading and overriding, and how polymorphism enables flexible code Skills: Practicing the concept of functional programming Attitude: Principles that shape how developers approach problem-solving and software design. |
| 3 | Java Virtual Machine (JVM) and Performance | Knowledge: Understanding the JVM's role in executing Java applications and how garbage collection works. Skills: Understanding the concept of JVM and Execution process. Attitude: Component of the Java ecosystem, and its design embodies specific attitudes toward performance and execution. |
| 4 | Development Tools and Practices | Knowledge: Proficiency with build tools like Maven or Gradle for managing dependencies and building projects. Using an Integrated Development Environment (IDE) like IntelliJ IDEA, Eclipse, or NetBeans effectively. Skills: |
| | | Understanding the development of new projects using java. Attitude: Commitment to efficiency, quality, collaboration, and continuous improvement. |

3. Syllabus

| Programming in Java SEMESTER – VI | | | |
|--|-------------------|-------------|------------|
| Course Code | M23BCS604A | CIE Marks | 50 |
| Number of Lecture Hours/Week (L: T: P: S) | (3:0:0:0) | SEE Marks | 50 |
| Total Number of Lecture Hours | 40 Hours | Total Marks | 100 |
| Credits | 03 | Exam Hours | 03 |
| Course objectives: This course will enable students to 1. Learn fundamental features of object oriented language and JAVA 2. Set up Java JDK environment to create, debug and run simple Java programs. 3. Learn object oriented concepts using programming examples. 4. Study the concepts of importing of packages and exception handling mechanism. 5. Discuss the String Handling examples with Object Oriented concept | | | |
| Module -1 | | | |
| An Overview of Java: Object-Oriented Programming, A First Simple Program, A Second Short Program, Two Control Statements, Using Blocks of Code, Lexical Issues, The Java Class Libraries. Data Types, Variables, and Arrays: Java Is a Strongly Typed Language, The Primitive Types, Integers, Floating-Point Types, Characters, Booleans, A Closer Look at Literals, Variables, Type Conversion and Casting, Automatic Type Promotion in Expressions, Arrays, Textbook 1:Ch 2,Ch 3. | | | |
| Module -2 | | | |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

Operators: Arithmetic Operators, The Bitwise Operators, Relational Operators, Boolean Logical Operators, The Assignment Operator, The ? Operator, Operator Precedence, Using Parentheses, **Control Statements:** Java's Selection Statements, Iteration Statements, Jump Statements. **Textbook 1:Ch 4,Ch 5.**

Module -3

Introducing Classes: Class Fundamentals, Declaring Objects, Assigning Object Reference Variables, Introducing Methods, Constructors, The this Keyword, Garbage Collection, The finalize() Method.

A Closer Look at Methods and Classes: Overloading Methods, A Closer Look at Argument Passing, Returning Objects, Recursion, Introducing Access Control, Introducing final.

Inheritance: Inheritance, Using super, Creating a Multilevel Hierarchy, When Constructors Are Called, Method Overriding.

Textbook 1: Ch 6, Ch 7.1-7.9, Ch 8.1-8.5

Module -4

Packages and Interfaces:

Packages, Access Protection, Importing Packages, Interfaces, Exception Handling: Exception-Handling Fundamentals, Exception Types, Uncaught Exceptions, Using try and catch, Multiple catch Clauses, Nested try Statements, throw, throws, finally, Java's Built-in Exceptions, Creating Your Own Exception Subclasses, Chained Exceptions, Using Exceptions.

Module -5

Type Wrappers, I/O, Applets, and Other Topics: I/O Basics, Reading Console Input, Writing Console Output, The PrintWriter Class, Reading and Writing Files, Applet Fundamentals-Example Program.

String Handling: The String Constructors, String Length, Special String Operations, Character Extraction, String Comparison, Searching Strings, Modifying a String, Data Conversion Using valueOf(), Changing the Case of Characters Within a String, Additional String Methods, StringBuffer, StringBuilder.

Text Books:

1. Herbert Schildt, Java the Complete Reference, 7th Edition, Tata McGraw Hill, 2007. (Chapters 2, 3, 4, 5, 6, 7, 8, 9, 10, 12, 13, 15)
2. Cay S Horstmann, "Core Java - Vol. 1 Fundamentals", Pearson Education, 10th Edition, 2016.

Reference Books:

1. Raoul-Gabriel Urma, Mario Fusco, Alan Mycroft, "Java 8 in Action", Dreamtech Press/Manning Press, 1st Edition, 2014.

2. Thinking in Java, Fourth Edition, by Bruce Eckel, Prentice Hall, 2006
(https://sd.blackball.lv/library/thinking_in_java_4th_edition.pdf)

4. Syllabus Timeline

| S/L | Syllabus Timeline | Description |
|-----|---|--|
| 1 | Week 1-2: An Overview of Java | It involves understanding its fundamental aspects, core features. The knowledge of basic concepts such as variables, datatypes, programming structure and execution environment. Acquiring the knowledge of basic concepts of Java programming. |
| 2 | Week 3-4: Operators | Understanding the usage and applying various types of operators effectively. It involves understanding and applying different types of operators. Usage of different operators to perform specific operations. |
| 3 | Week 5-6: Introducing Classes | Understanding the design, implement, and utilize classes effectively. Encompasses the understanding of classes concept in programming. Ability to use the concept of classes and object to solve related problems in Java. |
| 4 | Week 7-8: Packages and Interfaces | It involves understanding purpose, usage, and interaction of packages and interfaces within Java applications. Knowledge of packages and interfaces. Involve a range of abilities related to designing, implementing java application using packages and interfaces. |
| 5 | Week 9-10: Type Wrappers, I/O, Applets, and Other Topics | Involves understanding and effectively using basic concepts of Applets and string methods. Understanding the Applet viewer and different string methods to perform specific operations. Involve effectively using Applets to build basic GUI application. |

5. Teaching-Learning Process Strategies

| S/L | TLP Strategies: | Description |
|-----|--|---|
| 1 | Lecture Method | Utilize various teaching methods within the lecture format to reinforce competencies. |
| 2 | Video/Animation | Incorporate visual aids like videos/animations to enhance understanding of the Java concepts. |
| 3 | Collaborative Learning | Encourage collaborative learning for improved competency application. |
| 4 | Higher Order Thinking (HOTS) Questions: | Pose HOTS questions to stimulate critical thinking related to each competency. |
| 5 | Problem-Based Learning (PBL) | Implement PBL to enhance analytical skills and practical application of competencies |
| 6 | Pair Programming | Incorporate pair programming sessions where students collaborate in pairs to solve coding tasks or work on projects together. |
| 7 | Use of Tools and Resources | Familiarize students with IDEs like IntelliJ IDEA or Eclipse for coding and debugging. Apply Java concepts to practical problems and projects to demonstrate their utility. |
| 8 | Problem-Solving Sessions | Organize problem-solving sessions where students can work together to solve coding challenges and overcome programming obstacles |

6. Assessment Details (both CIE and SEE)

Theory Course with 3 Credits: Open Elective (OE)

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

This section of regulations is applicable to all theory-based courses. The minimum CIE marks requirement is 40% of maximum marks in each component.

CIE Split up for Open Elective (OE)

| Components | | Number | Weightage | Max. Marks | Min. Marks |
|-------------|-------------------------------|--------|-----------|------------|------------|
| (i) | Internal Assessment-Tests (A) | 2 | 50% | 25 | 10 |
| (ii) | Assignments/Quiz/Activity (B) | 2 | 50% | 25 | 10 |
| Total Marks | | | | 50 | 20 |

Final CIE Marks = (A) + (B)

Average internal assessment shall be the average of the 2 test marks conducted.

Semester End Examinations:

Theory Course with 4, 3 and 2 Credits: Professional Core Course (PC)/Professional Elective/Open Elective

1. Question paper pattern will be ten questions. Each question is set for 20marks. The medium of the question paper shall be English unless otherwise it is mentioned.
2. There shall be 2 question from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have mix of topics under that module if necessary.
3. The students have to answer 5 full questions selecting one full question from each module.
4. Marks scored will be proportionally scaled down to 50 marks

7. Learning Objectives

| S/L | Learning Objectives | Description |
|-----|---|---|
| 1 | Master Advanced Java Concepts | Ensuring that students gain a deep understanding of complex Java concepts, tools, and frameworks, enabling them to develop robust, scalable, and efficient applications |
| 2 | Apply Object-Oriented Programming principles | Creating and manipulating classes and objects, and understand the role of constructors. Implementing and using inheritance to create hierarchical relationships between classes. Utilizing method overloading and overriding to achieve polymorphism. |
| 3 | Understand Java's Execution Environment | Java code is compiled into bytecode and executed on the Java Virtual Machine (JVM). Understand basic concepts of memory management, including garbage collection. |
| 4 | Practical Application | Developing Practical Programming Skills. Designing and implementing the algorithms for common problems and tasks |

8. Course Outcomes (COs) and Mapping with POs/PSOs**Course Outcomes (COs)**

| COs | Description |
|---------------------|---|
| M23BCS604A.1 | Understanding the basic concepts of java to solve real time problems. |
| M23BCS604A.2 | Apply the object-oriented concepts of java and exception handling concepts to implement java program. |
| M23BCS604A.3 | Analyze I/O and String handling concept to develop an application program. |
| M23BCS604A.4 | Analyze and develop computer programs to solve real world problems in Java. |

CO-PO-PSO Mapping

| COs/ POs | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 | PSO 1 | PSO 2 |
|--------------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|-------|-------|
| M23BCS604A1 | 3 | - | - | - | - | - | - | - | - | - | - | - | - | - |
| M23BCS604A2 | - | 3 | - | - | - | - | - | - | - | - | - | - | - | - |
| M23BCS604A3 | - | - | 3 | - | - | - | - | - | - | - | - | - | 3 | 3 |
| M23BCS604A4 | - | - | - | 3 | - | - | - | - | - | - | - | 3 | 3 | 3 |
| M23BCS604A | 3 | 3 | 3 | 3 | - | - | - | - | - | - | - | 3 | 3 | 3 |

9. Assessment Plan**Continuous Internal Evaluation (CIE)**

| | | | | | | |
|--------------|-----------|-----------|-----------|-----------|--|-----------|
| Module 1 | 10 | | | | | 10 |
| Module 2 | | 10 | | | | 10 |
| Module 3 | | | 10 | | | 10 |
| Module 4 | | | | 10 | | 10 |
| Module 5 | | | | 10 | | 10 |
| Total | 10 | 10 | 10 | 20 | | 50 |

Semester End Examination (SEE)

| | | | | | | |
|--|-----|-----|-----|-----|-----|--------------|
| | CO1 | CO2 | CO3 | CO4 | CO5 | Total |
|--|-----|-----|-----|-----|-----|--------------|

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | CO1 | CO2 | CO3 | CO4 | CO5 | Total |
|--------------|-----|-----|-----|-----|-----|-----------|
| Module 1 | 20 | | | | | 20 |
| Module 2 | | 20 | | | | 20 |
| Module 3 | | | 20 | | | 20 |
| Module 4 | | | | 20 | | 20 |
| Module 5 | | | | 20 | | 20 |
| Total | 20 | 20 | 20 | 40 | | 50 |

Conditions for SEE Paper Setting:

Each module of SEE question paper should be allocated with questions for 20% of the total SEE marks **10**.

Future with this Subject

The future of advanced Java development is poised to evolve with advancements in technology and shifts in software development practices.

- 1. Language Evolution:** Ongoing updates and feature enhancements in recent versions improve performance, simplify syntax, and introduce new functionalities. This aims to simplify concurrency and scalability with lightweight, user-friendly fibers and continuations.
- 2. Performance Improvements:** The Java Virtual Machine (JVM) continues to receive performance optimizations, improving execution speed and efficiency.
- 3. Integration with Emerging Technologies:** Java is increasingly used in big data processing frameworks (like Apache Hadoop and Apache Spark) and artificial intelligence applications. Java's portability and robustness make it suitable for IoT applications and devices.
- 4. Educational and Enterprise Adoption:** Java remains a primary language taught in computer science programs, ensuring a steady influx of new developers. Many large enterprises continue to rely on Java for mission-critical applications, ensuring its relevance in the business world.
- 5. Development Practices and Tools:** Improved tools and practices for monitoring and managing the performance and health of Java applications in production environments. Advanced Integrated Development Environments (IDEs) and tools providing enhanced code assistance, debugging, and profiling capabilities.

| | |
|--|---------------------------------|
| 2023 Scheme – 5 th to 6 th Sem. Competency Based Syllabi for B.E CSE | Open Elective |
| 6 th Semester | Introduction to Data Structures |
| | M23BCS604B |

1. Prerequisites

| S/L | Proficiency | Prerequisites |
|-----|---------------------------------|--|
| 1 | Basic Programming Concepts | Variables and Data Types: Understanding different data types (int, float, char, etc.) and how to declare and use variables. Control Structures: Proficiency with loops (for, while, do-while) and conditional statements (if, else if, else, switch). Functions: Understanding how to define and use functions, including parameter passing, return types, and recursion. Pointers: Understanding pointers, pointer arithmetic, and how they relate to arrays and functions. Memory Management: Familiarity with dynamic memory allocation using malloc (), calloc (), realloc (), and free () functions. |
| 2 | Advanced C Programming Concepts | Structures: Ability to define and use structures to group different data types together. Unions and Enumerations: Understanding how to use unions and enumerations. File I/O: Basic knowledge of reading from and writing to files in C. Preprocessor Directives: Familiarity with macros, #define, #include, and conditional compilation. |
| 3 | Basic Algorithms | Sorting Algorithms: Understanding basic sorting algorithms like Bubble Sort, Selection Sort, and Insertion Sort. Searching Algorithms: Familiarity with searching techniques like Linear Search and Binary Search. |
| 4 | Mathematical Concepts | Discrete Mathematics: Basic understanding of sets, functions, relations, and combinatorics. |
| 5 | Problem-Solving Skills | Algorithm Design: Ability to design algorithms for solving problems using data structures. Debugging and Testing: Skills in debugging code and testing to ensure correctness and efficiency. |

2. Competencies

| S/L | Competency | KSA Description |
|-----|---|---|
| 1 | In-Depth Understanding of Data Structures | Knowledge (K) Arrays: Understanding static and dynamic arrays, multidimensional arrays, and their applications. Linked Lists: Knowledge of singly linked lists, doubly linked lists, and circular linked lists, including their memory structure and use cases. Stacks and Queues: Understanding of stack and queue concepts, including their implementation and applications using arrays and linked lists. Skills (S) Coding Proficiency: Ability to write, debug, and optimize code for implementing various data structures from scratch in C. Data Structure Operations: Skill in implementing operations such as insertion, deletion, searching, and traversal for different data structures. Attitudes: Use of Pointers and Dynamic Memory: Proficiency in using pointers for creating and manipulating complex data structures, and managing dynamic memory effectively. |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|---|---|---|
| 2 | Problem-Solving Abilities | Knowledge (K) Complexity Analysis: Knowledge of time and space complexity analysis using Big O notation, with the ability to analyze the performance of data structure operations. |
| | | Sorting and Searching Algorithms: Understanding of fundamental algorithms and their integration with data structures. Recursion and Iteration: Knowledge of recursive and iterative approaches to solving problems, especially in tree and graph algorithms. Skills (S) Data Structure Selection: Ability to choose the most appropriate data structure for solving specific problems based on efficiency and complexity considerations. Debugging: Skill in identifying and fixing bugs related to pointers, memory allocation, and data structure operations in C code. Optimization: Ability to optimize data structures for performance, minimizing time and space complexity through efficient algorithms and code practices. Attitudes: Practical Application: Ability to apply knowledge of data structures in solving real-world programming challenges, particularly in system programming, embedded systems, and performance-critical applications. Scalability and Efficiency: Ability to design and implement data structures that scale efficiently with large datasets or under high-performance requirements |
| 3 | Errors and Handling the Errors | Knowledge: Understanding of issues with errors. Skills: Implementing how to handle the errors through appropriate C++ programming construct. Attitudes: Appreciation for the way error is handled and making the execution of program in control. |
| 4 | Reusability of Classes and Methods | Knowledge: Understanding the importance of code reusability through classes and methods reusability. Skills: Applying concepts of object orientation with classes and methods. Describing the actual importance of reusability through implementations. Attitudes: Openness to learning and using object orientation concepts to achieve code reusability. |

3. Syllabus

| Introduction to Data Structures SEMESTER – VI | | | |
|--|-------------------|-------------|------------|
| Course Code | M23BCS604B | CIE Marks | 50 |
| Number of Lecture Hours/Week (L: T: P: S) | (3:0:0:0) | SEE Marks | 50 |
| Total Number of Lecture Hours | 40 Hours | Total Marks | 100 |
| Credits | 03 | Exam Hours | 03 |
| Course Learning Objectives 1. Introduce elementary data structures. 2. Analyze Linear Data Structures: Stack, Queues, Lists 3. Analyze Non Linear Data Structures: Trees 4. Assess appropriate data structure during program development/Problem Solving. | | | |
| Module -1 | | | |

| | |
|---|--|
| Introduction: Introduction to arrays: one-dimensional arrays, two dimensional arrays, initializing two dimensional arrays, Multidimensional arrays. Introduction to Pointers: Pointer concepts, accessing variables through pointers, Dynamic memory allocation, pointers applications. Introduction to structures and unions: Declaring structures, Giving values to members, structure initialization, arrays of structures, nested structure, unions, sizeof() structures. Textbook 1: Ch 8.3 to 8.15, Ch 12.3 to 12.19 Textbook 2: Ch 2.1 to 2.13, 2.51, 2.80 to 2.98 | |
| Module -2 | |
| Linear Data Structures-Stacks and queues: Introduction, Stack representation in Memory, Stack Operations, Stack Implementation, Applications of Stack. Introduction, Queues-Basic concept, Logical representation of Queues, Queue Operations and its types, Queue Implementation, Applications of Queue. Textbook 2: Ch 6.1 to 6.14, Ch 8.1, 8.2 | |
| Module -3 | |
| Linear Data Structures-Linked List: Introduction, Linked list Basic concept, Logical representation of Linked list, Self-Referential structure, Singly-linked List Operations and Implementation, Circular Linked List, applications of Linked list. Textbook 1: Ch 15.1, 15.3, 15.4, 15.8 Textbook 2: Ch 9.2, 9.5 | |
| Module -4 | |
| Non Linear Data Structures – Trees Introduction, Basic concept, Binary Tree and its types, Binary Tree Representation, Binary Tree Traversal, and Binary Search tree, Expression Trees. Textbook 1: Ch 16.1, 16.2 Textbook 2: Ch 10.1, 10.2, 10.4, 10.6.3 | |
| Module -5 | |
| Sorting and Searching Sorting: Introduction, Bubble sort, Selection sort, Insertion sort Searching: Introduction, Linear search, Binary search. Textbook 1: Ch 17.1, 17.2.2, 17.2.4, 17.3.1, 17.3.2 Textbook 2: Ch 11.1, 11.2, 11.3, 11.7, 11.10.1, 11.10.2 | |
| Textbooks 1. C Programming and data structures, E Balaguruswamy 4th Edition, 2007, McGraw Hill 2. Systematic approach to Data structures using C, A M Padma Reddy, 7th Edition 2007, Sri Nandi Publications. References 1. Ellis Horowitz and Sartaj Sahni, Fundamentals of Data Structures in C, 2nd Ed, Universities Press, 2014. 2. Seymour Lipschutz, Data Structures Schaum's Outlines, Revised 1st Ed, McGraw Hill, 2014. | |

4. Syllabus Timeline

| S/L | Syllabus Timeline | Description |
|-----|--|---|
| 1 | Week 1-2: Introduction to arrays, Introduction to Pointers | Introduction to arrays: one-dimensional arrays, two dimensional arrays, initializing two dimensional arrays, Multidimensional arrays. Introduction to Pointers: Pointer concepts, accessing variables through pointers, Dynamic memory allocation, pointers applications. Introduction to structures and unions: Declaring structures, Giving values to members, structure initialization, arrays of structures, nested structure, unions, sizeof() structures. |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|----------|--|---|
| 2 | Week 3-4: Stack and Queues | Introduction, Stack representation in Memory, Stack Operations, Stack Implementation, Applications of Stack. Introduction, Queues-Basic concept, Logical representation of Queues, Queue Operations and its types, Queue Implementation, Applications of Queue. |
| 3 | Week 5-6: Linear Data Structures Linked List: | Introduction, Linked list Basic concept, Logical representation of Linked list, Self-Referential structure, Singly-linked List Operations and Implementation, Circular Linked List, applications of Linked list. |
| 4 | Week 7-8: Non Linear Data Structures – Trees | Introduction, Basic concept, Binary Tree and its types, Binary Tree Representation, Binary Tree Traversal, Binary Search tree, Expression Trees. |
| 5 | Week 9-10: Sorting and Searching | Sorting: Introduction, Bubble sort, Selection sort, Insertion sort Searching: Introduction, Linear search, Binary search. |

5. Teaching-Learning Process Strategies

| S/L | TLP Strategies: | Description |
|------------|---|--|
| 1 | Foundation in C Programming | Prerequisite Knowledge: Ensure students have a solid understanding of C programming basics, including pointers, memory allocation, and structures (struct). Review Pointers and Memory Management: Since data structures in C heavily rely on pointers, start with a review of pointer operations and dynamic memory allocation using malloc(), calloc(), realloc(), and free(). |
| 2 | Begin with Basic Data Structures | Arrays and Strings: Start with arrays as the simplest form of data structure in C. Teach how strings are handled as arrays of characters, and introduce basic string manipulation functions. Structures (struct): Introduce the concept of structures to group different data types, laying the groundwork for more complex data structures like linked lists and trees. |
| 3 | Introduce Linked Lists | Singly Linked List: Begin with singly linked lists, covering concepts like nodes, head pointers, and traversal. Emphasize how pointers are used to link nodes. Implementation: Guide students through coding linked list operations such as insertion, deletion, and traversal. Debugging Practice: Since pointer errors are common, provide debugging exercises to help students develop problem-solving skills. |
| 4 | Stack and Queue Implementations | Stack Using Arrays and Linked Lists: Teach how to implement stacks using both arrays and linked lists. Discuss the advantages and disadvantages of each approach. Queue Implementation: Similar to stacks, introduce queues with both array-based and linked-list-based implementations. Explain the differences between simple queues, circular queues, and priority queues. |
| 5 | Dynamic Memory Management | Memory Allocation for Data Structures: Use examples to show how to allocate and deallocate memory for data structures dynamically. Discuss memory leaks and best practices for managing memory in C. |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|----------|---------------------------------|---|
| 6 | Advanced Data Structures | <p>Trees: Introduce binary trees and binary search trees, focusing on recursive implementations of tree operations. Explain traversal methods (in-order, preorder, post-order) and their applications.</p> <p>Graphs: Teach basic graph representations using adjacency matrices and adjacency lists. Discuss graph traversal algorithms (BFS and DFS) and their implementation in C.</p> <p>Hash Tables: Explain the concept of hashing and collision resolution techniques. Implement a simple hash table using arrays and linked lists.</p> |
|----------|---------------------------------|---|

6. Assessment Details (both CIE and SEE)

Theory Course with 3 Credits: Open Elective (OE)

This section of regulations is applicable to all theory-based courses. The minimum CIE marks requirement is 40% of maximum marks in each component.

CIE Split up for Open Elective (OE)

| Components | | Number | Weightage | Max. Marks | Min. Marks |
|--------------------|-------------------------------|--------|-----------|------------|------------|
| (i) | Internal Assessment-Tests (A) | 2 | 50% | 25 | 10 |
| (ii) | Assignments/Quiz/Activity (B) | 2 | 50% | 25 | 10 |
| Total Marks | | | | 50 | 20 |

$$\text{Final CIE Marks} = (\text{A}) + (\text{B}) \text{ Average}$$

internal assessment shall be the average of the 2 test marks conducted.

Semester End Examinations:

Theory Course with 4, 3 and 2 Credits: Professional Core Course (PC)/Professional Elective/Open Elective

1. Question paper pattern will be ten questions. Each question is set for 20 marks. The medium of the question paper shall be English unless otherwise it is mentioned.
2. There shall be 2 question from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have mix of topics under that module if necessary.

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

3. The students have to answer 5 full questions selecting one full question from each module.
4. Marks scored will be proportionally scaled down to 50 marks

7. Learning Objectives

| S/L | Learning Objectives | Description |
|----------|--|--|
| 1 | Understanding Basic Concepts of Data Structures | Definition and Types: Understand what a data structure is and the different types (e.g., linear and non-linear). Efficiency: Learn the importance of data structures in terms of time and space complexity. Data Structure Operations: Master the basic operations (insertion, deletion, traversal, searching, and sorting) on various data structures. |
| 2 | Mastering Linear Data Structures | Arrays: Learn how to use arrays, including dynamic arrays, and understand their memory management. Linked Lists: Understand the implementation of singly linked lists, doubly linked lists, and circular linked lists. Stacks: Study stack operations (push, pop, peek) and their implementation using arrays or linked lists. Queues: Understand queues, including circular queues, and their implementation using arrays or linked lists. |
| 3 | Understanding NonLinear Data Structures | Trees: Learn about binary trees, binary search trees (BST), AVL trees, and heap trees. Understand tree traversal methods (in-order, pre-order, post-order). Graphs: Understand the representation of graphs using adjacency matrices and lists. Study graph traversal techniques (BFS and DFS). Hash Tables: Learn about hashing, hash functions, and collision resolution techniques. |
| 4 | Practical Implementation Skills | C Programming: Enhance C programming skills, particularly in relation to implementing data structures from scratch. Problem Solving: Apply data structures to solve real-world problems, understanding when and how to use each type of structure. Debugging and Optimization: Learn to debug code effectively and optimized data structures for performance. |

8.Course Outcomes (COs) and Mapping with POs/ PSOs

Course Outcomes (COs)

| Cos | Description |
|---------------------|--|
| M23BCS604B.1 | Apply basic concepts of data structures and linear data structure to solve computational problems. |
| M23BCS604B.2 | Apply dynamic memory management techniques using pointers and implement complex data structures. |
| M23BCS604B.3 | Analyze non-linear data structures like trees and graphs. |
| M23BCS604B.4 | Analyze various algorithms for sorting, searching, and other data operations. |

CO-PO-PSO Mapping

| COs/POs | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 | PSO1 | PSO2 |
|---------------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|------|------|

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | | | | | | | | | | | | | |
|---------------------|----------|----------|---|---|----------|---|---|---|---|---|---|---|----------|----------|
| M23BCS604B.2 | 3 | - | - | - | 3 | - | - | - | - | - | - | - | 3 | |
| M23BCS604B.3 | - | 3 | - | - | 3 | - | - | - | - | - | - | - | | 3 |
| M23BCS604B.4 | - | 3 | - | - | 3 | - | - | - | - | - | - | - | 3 | 3 |
| M23BCS604B | 3 | 3 | - | - | 3 | - | - | - | - | - | - | - | 3 | 3 |

Explanation:

- **CO1 and CO2** primarily maps to **PO1** because it involves applying foundational knowledge to solve problems.
- **CO3 and CO4** relate **PO2**, as they require students to analyze various data structures, which aligns with problemsolving.
- **CO1 to CO4** maps to **PO5** because student use modern tools (such as C programming language).

9. Assessment Plan

Continuous Internal Evaluation (CIE)

| | CO1 | CO2 | CO3 | CO4 | Total |
|--------------|-----------|-----------|-----------|-----------|-----------|
| Module 1 | 10 | | | | 10 |
| Module 2 | | 10 | | | 10 |
| Module 3 | | | 10 | | 10 |
| Module 4 | | | | 10 | 10 |
| Module 5 | | | | 10 | 10 |
| Total | 10 | 10 | 10 | 20 | 50 |

Semester End Examination (SEE)

| | CO1 | CO2 | CO3 | CO4 | Total |
|--------------|-----------|-----------|-----------|-----------|------------|
| Module 1 | 20 | | | | 20 |
| Module 2 | | 20 | | | 20 |
| Module 3 | | | 20 | | 20 |
| Module 4 | | | | 20 | 20 |
| Module 5 | | | | 20 | 20 |
| Total | 20 | 20 | 20 | 40 | 100 |

Conditions for SEE Paper Setting:

Each module of SEE question paper should be allocated with questions for 20% of the total SEE marks **10**.

Future with this Subject

Foundation for Advanced Computer Science Concepts

- **Algorithms:** Data structures are the building blocks for designing and analyzing algorithms. A solid understanding of data structures in C prepares you for more advanced topics like algorithm design, complexity analysis, and optimization.
- **Systems Programming:** C is often used in system-level programming (e.g., operating systems, embedded systems). Understanding data structures is crucial for writing efficient and high-performance system code.
- **Artificial Intelligence and Machine Learning:** Efficient data management using appropriate structures is key in AI/ML for handling large datasets and implementing algorithms.
- **Career Opportunities**
- **Software Development:** Knowledge of data structures is essential for software engineers, as it directly impacts the efficiency and performance of software applications. Companies like Google, Microsoft, and Amazon highly value this skill.
- **System Architect or Engineer:** In roles that involve designing large-scale systems (e.g., distributed systems, databases), data structures are vital for ensuring scalability and performance.
- **Embedded Systems Engineer:** C is the language of choice for embedded systems, where efficient data structures are crucial due to limited resources.

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

- **Database Administrator/Developer:** Understanding data structures helps in optimizing database queries, designing indexing strategies, and improving overall database performance.
- **Game Development:** Game developers use data structures extensively for managing game states, rendering graphics, and handling user input in real-time.

| | | |
|--------------------------|---|------------|
| 6 th Semester | Open Elective –I(OE) Introduction to DBMS | M23BCS604C |
|--------------------------|---|------------|

1. Prerequisites

| S/L | Proficiency | Prerequisites |
|-----|--------------------------------------|---|
| 1 | Basic Computer Literacy | A solid understanding of how computers work, file management, and using software applications is essential. |
| 2 | Fundamentals of Data and Information | Familiarize yourself with the concepts of data, information, and knowledge. Understand the differences between structured and unstructured data. |
| 3 | Basic Programming Concepts | While not mandatory, a familiarity with programming concepts can be helpful, especially if you intend to work with databases in a software development context. |
| 4 | Operating System Concepts | Familiarity with concepts like file systems, memory management, and process scheduling can help you understand how a DBMS interacts with the underlying operating system. |
| 5 | Problem-Solving Skills | Develop your analytical and problem-solving skills, as designing efficient and effective databases often requires making trade-offs and optimizing for different scenarios. |

2. Competencies

| S/L | Competency | KSA Description |
|-----|-----------------------------------|---|
| 1 | Data Modeling | Knowledge: Understand the principles of data modeling. Skills: Entity-Relationship diagrams (ERDs), Attitudes: These concepts help design efficient and organized database. |
| 2 | Relational Algebra and Set Theory | Knowledge: Gain basic knowledge of relational algebra and set theory. Skills: The knowledge used to interact with relational databases. Attitudes: The foundation of relational databases. |
| 3 | SQL (Structured Query Language): | Knowledge: the basics of SQL, the standard language for data query. Skills: Writing queries to retrieve, update, and manipulate data. Attitudes: Acquired skill to be used for querying with relational databases. |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|---|------------------------------|--|
| 4 | Normalization | Knowledge: Learn about database normalization. Skills: To eliminate redundancy and improve data integrity. Attitudes: Understand the concept of normalization for optimizing query performance. |
| 5 | DataBase applications | Knowledge: Gain insight into query optimization strategies. Skills: To design data base structure for a particular application. Attitudes: To enhance database performance. |

3. Syllabus

| Introduction DBMS SEMESTER – VI | | | |
|--|-------------------|-------------|------------|
| Course Code | M23BCS604C | CIE Marks | 50 |
| Number of Lecture Hours/Week(L: T: P: S) | (3:0:0:0) | SEE Marks | 50 |
| Total Number of Lecture Hours | 40 Hours | Total Marks | 100 |
| Credits | 03 | Exam Hours | 03 |
| Course objectives: 1. To provide a strong foundation in database concepts, technology, and practice. 2. To practice SQL programming through a variety of database problems. 3. To understand the relational database design principles. 4. To demonstrate the use of concurrency and transactions in database. 5. To design and build database application for real world problems. 6. To become familiar with database storage structures and access techniques. | | | |
| Module -1 | | | |

| | | |
|--|--|----------------|
| Introduction to DBMS and Database Design | | 8 hours |
| Introduction to Databases: Introduction, Characteristics of database approach, Advantages of using the DBMS approach, History of database applications. Overview of Database Languages and Architectures: Data Models, Schemas, and Instances. Three schema architecture and data independence, database languages, and interfaces. The Database System environment. Conceptual Data Modeling using Entities and Relationships: Entity types, Entity sets, attributes, roles, and structural constraints, Weak entity types, ER diagrams, examples, Specialization and Generalization. Text-1: CH-1.1-1.8, 2.1-2.6, 3.1-3.10 | | |
| Module -2 | | |
| Relational Models | | 8 hours |
| Relational Model: Relational Model Concepts, Relational Model Constraints and relational database schemas, Update operations, transactions, and dealing with constraint violations. Relational Algebra and Calculus: Unary and Binary relational operations, additional relational operations (aggregate, grouping, etc.) Examples of Queries in relational algebra, Tuple relational calculus, Domain relational calculus. Mapping Conceptual Design into a Logical Design: Relational Database Design using ER-to-Relational mapping. Text-1 : CH-5.1-5.3,8.1-8.7,9.1 | | |
| Module -3 | | |
| SQL | | 8 hours |
| SQL: SQL data definition and data types, Schema change statements in SQL, specifying constraints in SQL, retrieval queries in SQL, INSERT, DELETE, and UPDATE statements in SQL, Additional features of SQL : Advanced Queries: More complex SQL retrieval queries, Specifying constraints as assertions and action triggers, Views in SQL. Text-1 CH-6.1-6.5,7.1-7.4 | | |
| Module -4 | | |
| Functional dependencies: | | 8 hours |
| Database Design Theory – Introduction to Normalization using Functional and Multivalued Dependencies: Informal design guidelines for relation schema, Functional Dependencies, Text-1: CH-14.1-14.3 | | |
| Module -5 | | |
| Normalization: | | |
| Normal Forms based on Primary Keys, Second and Third Normal Forms, Boyce-Codd Normal Form, Multivalued Dependency and Fourth Normal Form, Join Dependencies and Fifth Normal Form. Text-1:CH-14.4-14.7 | | |
| Text Books: | | |
| 1. Fundamentals of Database Systems, Ramez Elmasri and Shamkant B. Navathe, 7 th Edition, 2017, Pearson. 2. Raghu Ramakrishnan and Johannes Gehrke, Database Management Systems, McGraw-Hill, 3 rd Edition. | | |
| Reference Books: | | |
| 1.Data base System Concepts, Silberschatz, Korth, McGraw hill, Sixth Edition 2. An Introduction to Database systems, C.J. Date, A.Kannan, S.Swami Nadhan, Pearson, Eight Edition | | |

4. Syllabus Timeline

| S/L | Syllabus Timeline | Description |
|-----|-------------------|---|
| 1 | Week 1-3 | Knowledge: Understand the principles of data modeling Skills: Entity-Relationship diagrams (ERDs). These concepts help design efficient and organized database. |
| 2 | Week 4-6 | Knowledge: Gain basic knowledge of relational algebra and set theory. Skills: The knowledge used to interact with relational databases and the foundation of relational databases. |

| 2023 Scheme - 5 th to 6 th Sem Competency Based Syllabi for B.E. CSE | | |
|--|------------|---|
| | | Skills: To design data base structure for a particular application. |
| 3 | Week 7-9 | Knowledge: The basics of SQL, the standard language for data query. Skills: Writing queries to retrieve, update, and manipulate data. |
| 4 | Week 10-12 | Knowledge: Learn about database normalization to eliminate redundancy and improve data integrity. Skills: Understand the concept of normalization for optimizing query performance. |
| 5 | Week 13-15 | Knowledge: Gain sight into query optimization strategies to enhance database performance. |

5. Teaching-Learning Process Strategies

| S/L | TLP Strategies: | Description |
|-----|------------------------------|---|
| 1 | Lecture Method | • Using traditional lecture methods and ICT as and when needed. |
| 2 | Video/Animation | • Incorporate visual aids like videos/animations to enhance learning. |
| 3 | Collaborative Learning | • Encourage collaborative learning approaches for peer learning. |
| 4 | Problem-Based Learning (PBL) | • Implement PBL to enhance analytical skills and practical application. |
| 5 | Real-World Application | • Discuss practical applications to connect theoretical concepts with realworld competencies. |
| 6 | Programming Assignments | • Assign programming tasks to reinforce practical skills associated with competencies. |

6. Assessment Details (both CIE and SEE)

The minimum CIE marks requirement is 40% of maximum marks in each component.

| up | Components | | Number | Weightage | Max. Marks | Min. Marks |
|----|-------------------------------|------|--------|-----------|------------|------------|
| | (i) | (ii) | | | | |
| | Internal Assessment-Tests (A) | | 2 | 50% | 25 | 10 |
| | Assignments/Quiz/Activity (B) | | 2 | 50% | 25 | 10 |
| | Total Marks | | | | 50 | 20 |

**CIE Split
for Open
Elective
(OE)**

$$\text{Final CIE Marks} = (A) + (B)$$

Average internal assessment shall be the average of the 2 test marks conducted.

Semester End Examinations:

1. Question paper pattern will be ten questions. Each question is set for 20marks. The medium of the question paper shall be English unless otherwise it is mentioned.
2. There shall be 2 question from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have mix of topics under that module if necessary.
3. The students have to answer 5 full questions selecting one full question from each module.
4. Marks scored will be proportionally scaled down to 50 marks

7. Learning Objectives

| S/L | Learning Objectives |
|-----|---------------------|
|-----|---------------------|

| | |
|---------------------|--|
| M23BCS604C.4 | 2023 Schema - 5th to 6th Sem Competency Based Syllabi for B.E CSE |
| | Design and develop entity relationship model and database application. |

| | |
|---|--|
| 1 | To provide a strong foundation in database concepts, technology, and practice. |
| 2 | To practice SQL programming through a variety of database problems. |
| 3 | To understand the relational database design principles. |
| 4 | To design and build database application for real world problems. |
| 5 | To become familiar with database storage structures and access techniques. |

8. Course Outcomes (COs) and Mapping with POs/ PSOs Course Outcomes (COs):

| Cos | Description |
|---------------------|--|
| M23BCS604C.1 | Understand and apply the basic elements of a relational database management system. |
| M23BCS604C.2 | Apply various constraints, techniques and Structured Query Language (SQL) statement for database operations. |
| M23BCS604C.3 | Analyze various database models and normalization for the given application. |

CO-PO-PSO Mapping:

| COs/POs | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 | PSO1 | PSO2 |
|---------------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|------|------|
| M23BCS604C.1 | 3 | - | - | - | - | - | - | - | - | - | - | - | 3 | - |
| M23BCS604C.2 | 3 | - | - | - | 2 | - | - | - | - | - | - | - | 3 | 3 |
| M23BCS604C.3 | - | 3 | - | - | - | - | - | - | - | - | - | - | - | 3 |
| M23BCS604C.4 | - | - | 3 | - | - | - | - | - | - | - | - | - | - | 3 |
| M23BCS604C | 3 | 3 | 3 | | 2 | | | | | | | | 3 | 3 |

9. Assessment Plan

| Continuous Internal Evaluation (CIE) | CO1 | CO2 | CO3 | CO4 | Total |
|--------------------------------------|-----------|-----------|-----------|-----------|-----------|
| Module 1 | 10 | | | | 10 |
| Module 2 | | 10 | | | 10 |
| Module 3 | | | 10 | | 10 |
| Module 4 | | | | 10 | 10 |
| Module 5 | | | | 10 | 10 |
| Total | 10 | 10 | 10 | 20 | 50 |

Semester End Examination (SEE)

| | CO1 | CO2 | CO3 | CO4 | Total |
|--------------|-----------|-----------|-----------|-----------|------------|
| Module 1 | 20 | | | | 20 |
| Module 2 | | 20 | | | 20 |
| Module 3 | | | 20 | | 20 |
| Module 4 | | | | 20 | 20 |
| Module 5 | | | | 20 | 20 |
| Total | 20 | 20 | 20 | 40 | 100 |

Each module of SEE question paper should be allocated with questions for 20% of the total SEE mark

10.Future with this Subject:

- Data Organization and Storage: Companies can store their data in databases in a structured, organized manner, making it simpler to access and analyze.
- Data Analysis: Databases contain a lot of data, and with the correct tools, organizations can analyze that data to find insights that will help them make business decisions and strategies.
- Efficiency: Databases give companies a centralized area to keep their data, making it more straightforward for staff to retrieve the data they want, minimizing duplication of work and boosting efficiency.
- Security & Privacy: Databases let companies control who has access to their data, ensuring that only authorized users may see and change it. This aids in preventing unauthorized access to and breaches of vital consumer and corporate information.
- This course is the foundation for many other courses to follow such as cloud storage, distributed data storage, block chain, Big data, Quantum computing etc.,

| | | |
|--------------------------|---|------------|
| 6 th Semester | Open Elective-I(OE) Introduction to Operating system | M23BCS604D |
|--------------------------|---|------------|

1. Prerequisites

| S/L | Proficiency | Prerequisites |
|-----|--------------------------------|---|
| 1 | Basic programming skills | Understanding of programming concepts and experience in a programming language such as C, C++, Java, or Python. |
| 2 | Computer architecture | Basic understanding of computer organization and architecture, including concepts like memory hierarchy, CPU operations, and input/output systems. |
| 3 | Data structures and algorithms | Familiarity with fundamental data structures (arrays, linked lists, trees, etc.) and algorithms (sorting, searching, etc.). |
| 4 | Computer Organization | Knowledge of how hardware components interact at a low level is helpful. This includes concepts like machine instructions, addressing modes, memory management, and I/O operations. |
| 5 | Databases | Basic understanding of databases and file management systems is helpful as operating systems often interact with databases for storing and retrieving data. |

2. Competencies

| S/L | Competency | KSA Description |
|-----|------------|-----------------|
|-----|------------|-----------------|

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|---|-------------------------------|--|
| 1 | Operating System Fundamentals | <p>Knowledge: Understanding of different operating system architectures (e.g., monolithic, microkernel, hybrid). Familiarity with system calls, file systems, memory management, process scheduling, and input/output subsystems.</p> <p>Skills: Ability to configure and install various operating systems (e.g., Windows, Linux, macOS, UNIX). Proficiency in troubleshooting OS-related issues.</p> <p>Attitudes: Ability to explain the core components of an operating system and how they interact, diagnose common OS-related performance issues, and optimize the OS for better resource utilization.</p> |
| 2 | System Administration | <p>Knowledge: Understanding of system administration tasks such as user management, system security, backup, software installation, and system configuration.</p> <p>Skills: Proficiency in managing user accounts, configuring system services, managing file systems, applying patches, and performing system backups.</p> <p>Attitudes: Ability to perform routine administrative tasks, automate repetitive tasks through scripts, and ensure that the operating system is secure and running efficiently.</p> |
| 3 | File System Management | <p>Knowledge: Understanding of different types of file systems (e.g., NTFS, ext4, APFS, FAT32). Knowledge of file system structures, data storage, permissions, and disk management tools.</p> <p>Skills: Ability to create, mount, and manage file systems. Proficiency in handling disk partitions, optimizing file system performance, and resolving file system-related issues.</p> <p>Attitudes: Ability to recover data from damaged or corrupted file systems, implement proper file access permissions, and ensure data integrity in an OS.</p> |
| 4 | Memory Management | <p>Knowledge: Understanding of memory hierarchy, paging, segmentation, and virtual memory. Knowledge of memory allocation techniques and OS strategies to handle memory (e.g., paging, swapping).</p> <p>Skills: Ability to monitor and troubleshoot memory usage in the operating system, such as detecting memory leaks, managing memory usage, and optimizing virtual memory.</p> <p>Attitudes: Ability to design efficient memory management techniques for both hardware and software, ensure that system memory is allocated properly, and minimize the occurrence of out-of-memory errors.</p> |
| 5 | Process Management | <p>Knowledge: Understanding of how processes are created, scheduled, and terminated. Familiarity with multithreading, multitasking, process synchronization, and inter-process communication (IPC).</p> |
| | | <p>Skills: Ability to manage processes using command-line tools or GUI utilities. Proficiency in using OS utilities to track process states and system resource consumption.</p> <p>Attitudes: Ability to implement and manage process scheduling strategies, optimize resource allocation, and troubleshoot process deadlocks or race conditions.</p> |

3. Syllabus

| Introduction to Operating system SEMESTER – VI | | | |
|---|-------------------|-------------|------------|
| Course Code | M23BCS604D | CIE Marks | 50 |
| Number of Lecture Hours/Week(L: T: P: S) | (3:0:0:0) | SEE Marks | 50 |
| Total Number of Lecture Hours | 40 Hours | Total Marks | 100 |
| Credits | 03 | Exam Hours | 03 |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| |
|--|
| <p>Course objectives: This course will enable students to:</p> <ol style="list-style-type: none"> 1. Basic Understanding of Computer System Structure and Operating Systems Structure 2. Analyze the main tasks carried out by the operating systems Process and thread management, CPU scheduling algorithms, memory management and deadlocks. 3. To demonstrate different APIs/Commands related to processor, memory, storage and file system management. |
| Module -1 |
| <p>Introduction to operating systems: What operating systems do; Computer System organization; Computer System architecture; Operating System operations(dual-mode and multi-mode); computing environments; System structures: Operating system services; User - Operating System interface; System calls; Types of system calls; operating system structures</p> <p>textbook 1- chapter 1(1.1,1.2,1.3,1.5,1.11) chapter 2 (2.1,2.2,2.3,2.4,2.7)</p> |
| Module -2 |
| <p>Process management: Process Concept; Process Scheduling; Operation on Process; Inter-Process Communication. Multithreaded Programming: Overview; Multicore Programming, multithreading models, thread libraries, threading issues. Process scheduling - Basic Concepts, CPU I/O Burst Cycle; CPU Scheduler – Pre-emptive Scheduling, Dispatcher; Scheduling Criteria; Scheduling Algorithms – FCFS, SJF, Round-Robin, Priority.</p> <p>textbook 1-chapter 3(3.1,3.2,3.3,3.4)chapter 4(4.1,4.2,4.3,4.4,4.6)chapter 6(6.1,6.2,6.3)</p> |
| Module -3 |
| <p>Process Synchronization: Synchronization: The critical section problem; Peterson's solution; Synchronization hardware; Mutex locks; Semaphores; Classical problems of synchronization; Deadlocks: System model; Deadlock characterization; Methods for handling deadlocks; Deadlock prevention; Deadlock avoidance; Deadlock detection and recovery from deadlock.</p> <p>textbook 1-chapter 5(5.1,5.2,5.3,5.4,5.5,5.6,5.7) chapter 7(7.1-7.7)</p> |
| Module -4 |
| <p>Memory Management: Background; Swapping; Contiguous memory allocation; Segmentation; Paging; Structure of page table; Virtual Memory Management: Background; Demand paging; Page replacement; Allocation of frames; Thrashing.</p> <p>textbook 1-chapter 8(8.1-8.6) chapter 9(9.1,9.2,9.4,9.5,9.6)</p> |
| Module -5 |
| <p>File System, Implementation of File System: File concept; Access methods; Directory and Disk structure; File system mounting; File sharing; Implementing File system: File system structure; File system implementation; Allocation methods; Free space management. Storage management: overview of Mass storage structures; Disk structure; Disk attachment; Disk scheduling;</p> <p>textbook 1-chapter 11(11.1-11.5)chapter 12(12.1-12.5)chapter 10(10.1-10.4)</p> |
| <p>Text Books:</p> <ol style="list-style-type: none"> 1. Abraham Silberschatz, Peter Baer Galvin, Greg Gagne, Operating System Concepts 9th edition, Wiley - India, 2018 2. 4. Syllabus Timeline

| S/L | Syllabus Timeline | Description |
|-----|--|---|
| 1 | Week 1-2: Introduction to operating systems | Competency: Understanding of Operating System Concepts Knowledge: how operating systems manage hardware resources efficiently. Skills: Understanding of basic operating system functions and objectives, knowledge of operating system history and evolution. |
| 2 | Week 3-4: Process management | Competency: Problem-solving Skills Knowledge: develop skills in breaking down problems and designing efficient solutions. Skills: Proficiency in evaluating CPU scheduling algorithms, ability to analyze performance metrics. |
| 3 | Week 5-6: Process Synchronization and deadlocks | Competency: Concurrency and Parallelism Knowledge: to design and implement concurrent programs that utilize multiple threads or processes. Skills: Understanding process and thread concepts, synchronization mechanisms. |
| 4 | Week 7-8: Memory Management | Competency: Memory Management Knowledge: how operating systems manage memory resources efficiently to support multiple processes. Skills: Understanding of virtual memory concepts, familiarity with memory allocation strategies. |
| 5 | Week 9-10: File System, Implementation of File System and storage management | Competency: File Systems Knowledge: how operating systems manage storage devices and provide a unified interface for file management.. Skills: Proficiency in file system organization and implementation, knowledge of disk management techniques. |
| 6 | Week 11-12: Integration and Practical Applications | Apply learned concepts and competencies to real-world scenarios. Hands-on practice with programming assignments |

5. Teaching-Learning Process Strategies

| S/L | TLP Strategies: | Description |
|-----|---|--|
| 1 | Lecture Method | Utilize various teaching methods within the lecture format to reinforce competencies. |
| 2 | Video/Animation | Incorporate visual aids like videos/animations to enhance understanding of the concepts. |
| 3 | Collaborative Learning | Encourage collaborative learning for improved competency application. |
| 4 | Higher Order Thinking (HOTS) Questions: | Pose HOTS questions to stimulate critical thinking related to each competency. |
| 5 | Problem-Based Learning (PBL) | Implement PBL to enhance analytical skills and practical application of competencies |
| 6 | Multiple Representations | Introduce topics in various representations to reinforce competencies |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|---|-------------------------|---|
| 7 | Real-World Application | Discuss practical applications to connect theoretical concepts with real-world competencies. |
| 8 | Flipped Class Technique | Utilize a flipped class approach, providing materials before class to facilitate deeper understanding of competencies |
| 9 | Programming Assignments | Assign programming tasks to reinforce practical skills associated with competencies. |

6 .Assessment Details (both CIE and SEE)

The minimum CIE marks requirement is 40% of maximum marks in each component.

CIE Split up for Open Elective (OE)

| Components | | Number | Weightage | Max. Marks | Min. Marks |
|--------------------|-------------------------------|--------|-----------|------------|------------|
| (i) | Internal Assessment-Tests (A) | 2 | 50% | 25 | 10 |
| (ii) | Assignments/Quiz/Activity (B) | 2 | 50% | 25 | 10 |
| Total Marks | | | | 50 | 20 |

Final CIE Marks = (A) + (B)

Average internal assessment shall be the average of the 2 test marks conducted.

Semester End Examinations:

1. Question paper pattern will be ten questions. Each question is set for 20marks. The medium of the question paper shall be English unless otherwise it is mentioned.
2. There shall be 2 question from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have mix of topics under that module if necessary.
3. The students have to answer 5 full questions selecting one full question from each module.
4. Marks scored will be proportionally scaled down to 50 marks

7. Learning Objectives

| S/L | Learning Objectives | Description |
|-----|---|---|
| 1 | Understanding Operating System Fundamentals | Students should grasp the basic concepts, components, and functions of an operating system, including process management, memory management, file systems, and device management. |
| 2 | Process Management | Learning how processes are created, scheduled, and managed by the operating system, including topics such as process synchronization, inter-process communication, and deadlock handling. |
| 3 | Concurrency and Synchronization | Learning about concurrent processes, critical sections, mutual exclusion, synchronization primitives, and techniques for ensuring thread safety and avoiding race conditions. |
| 4 | Memory Management | Understanding memory hierarchy, virtual memory, memory allocation strategies, and techniques for efficient memory usage, including paging, segmentation, and memory protection. |
| 5 | File Systems | Exploring file system organization, file operations, directory structures, file system implementation, and techniques for improving file system performance and reliability. |

8. Course Outcomes (Cos) and Mapping with Pos/ PSOs

Course Outcomes (Cos)

| Cos | Description |
|---------------------|--|
| M23BCS604D.1 | Understand the fundamental concepts and principles of operating systems. |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | |
|---------------------|---|
| M23BCS604D.2 | Analyze various inter-process communication, multiprogramming mechanisms and apply different process scheduling algorithms. |
| M23BCS604D.3 | Examine multiple mechanisms for managing deadlock situations and Implement both software and hardware solutions to address the critical-section problem |
| M23BCS604D.4 | Implement and evaluate memory management techniques. |
| M23BCS604D.5 | Examine the structure of file systems and the organization of secondary storage devices |

| Module 5 | | | | | 20 | 20 |
| Total | 20 | 20 | 20 | 20 | 20 | 100 |

Conditions for SEE Paper Setting:

Each module of SEE question paper should be allocated with questions for 20% of the total SEE marks.

10. Future with this Subject

The future with operating systems is likely to involve several key trends and developments:

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

- Continued Integration of AI: Operating systems will increasingly integrate AI and machine learning algorithms to provide more personalized and adaptive user experiences. This could involve features like predictive behavior, context-awareness, and intelligent automation.
- Enhanced Security: With cyber threats evolving rapidly, future operating systems will place even greater emphasis on security. This might include built-in encryption, advanced authentication methods like biometrics, and more robust intrusion detection systems.
- Interconnectivity and IoT: As the Internet of Things (IoT) expands, operating systems will need to seamlessly integrate with a wide range of devices and platforms. This could lead to more standardized communication protocols and frameworks for managing diverse IoT ecosystems.
- Edge Computing: With the proliferation of edge computing devices, operating systems will need to support distributed computing architectures effectively. This involves optimizing resource management, latency reduction, and ensuring seamless connectivity between edge devices and centralized servers.
- Virtualization and Containerization: Virtualization and containerization technologies will continue to play a crucial role in managing and deploying applications. Future operating systems may provide more native support for these technologies, making it easier to create and manage isolated environments for running application.

| | | |
|--------------------------|--|-----------|
| 6 th Semester | Project Work (PW) MAJOR PROJECT PHASE-I | M23BCS605 |
|--------------------------|--|-----------|

1. Prerequisites

| S/L | Proficiency | Prerequisites |
|-----|------------------------------------|--|
| 1 | Understanding Research Methodology | Basic understanding of research methods, gained from prior courses in engineering mathematics and introductory project work. |
| 2 | Conducting a Literature Survey | Familiarity with academic databases, journals, and research papers; understanding of the subject matter from core courses. |
| 3 | Defining a Problem Statement | Critical thinking and analytical skills, developed through previous coursework in related engineering disciplines. |
| 4 | Multidisciplinary Collaboration | Basic knowledge of related disciplines (e.g., Mechanical students should have a basic understanding of Electronics, etc.). |
| 5 | Technical Communication | Writing technical reports and presenting technical content |

2. Competencies

| S/L | Competency | KSA Description |
|-----|------------|-----------------|
|-----|------------|-----------------|

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|---|-------------------------|---|
| 1 | Research Skills | Knowledge: Understanding of advanced research methods and tools. Skill: Ability to identify, review, and synthesize relevant literature. Attitude: Commitment to thorough investigation and unbiased analysis. |
| 2 | Problem Identification | Knowledge: Deep understanding of the chosen topic area. Skill: Capability to define and frame a research problem effectively. Attitude: Critical and innovative thinking. |
| 3 | Technical Writing | Knowledge: Familiarity with technical writing conventions. Skill: Proficiency in drafting structured, clear, and concise reports. Attitude: Attention to detail and accuracy in documentation. |
| 4 | Presentation Techniques | Knowledge: Understanding of effective communication strategies. Skill: Ability to create and deliver engaging presentations. Attitude: Confidence and poise in public speaking. |

3. Project Timeline

| S/L | Timeline | Description |
|-----|------------|---|
| 1 | Week 1-2 | Introduction to research methods and tools; exploring literature review techniques. |
| 2 | Week 3-4 | Initiating literature survey; identifying key research papers and sources. |
| 3 | Week 5-6 | Analysis and synthesis of literature; identifying gaps and formulating insights. |
| 4 | Week 7-8 | Defining the problem statement based on literature findings. |
| 5 | Week 9-10 | Drafting the initial report; focusing on structure and content. |
| 6 | Week 11-12 | Finalizing the report and preparing the presentation. |
| 7 | Week 13-14 | Presentation rehearsal; peer review and feedback sessions |
| 8 | Week 15 | Submission of the final report and formal presentation. |

4. Course Objectives

- To enable students to conduct a comprehensive literature survey related to their project topic.
- To guide students in defining a clear and feasible problem statement.
- To develop skills in report writing, summarizing findings, and formal presentation.

5. Assessment Details (both CIE and SEE)

CIE procedure for Project Work Phase-I:

(1) **Single discipline:** The CIE marks shall be awarded by a committee consisting of the Head of the concerned Department and two senior faculty members of the Department, one of whom shall be the Guide. The CIE marks awarded for the project work shall be based on the evaluation of the project work Report, project presentation skill, and question and answer session in the ratio 50:25:25. The marks awarded for the project report shall be the same for all the batch mates.

(2) **Interdisciplinary:** Continuous Internal Evaluation shall be group-wise at the college level with the participation of all guides of the college. Participation of external guide/s, if any, is desirable. The CIE marks awarded for the project work, shall be based on the evaluation of project work Report, project presentation skill, and question and answer session in the ratio 50:25:25. The marks awarded for the project report shall be the same for all the batch mates.

SEE procedure for Project Work Phase-I: There shall be no SEE.

6. Learning Objectives

| S/L | Learning Objectives | Description |
|-----|---|---|
| 1 | Understand the process of conducting a literature survey. | Students will gain expertise in identifying and reviewing relevant research literature. |
| 2 | To formulate a research problem statement. | Students will learn to define a research problem that is clear, concise, and researchable. |
| 3 | To enhance technical writing and presentation skills. | Students will develop the ability to draft detailed reports and present their findings effectively. |

7. Course Outcomes (COs) and Mapping with POs/ PSOs

Course Outcomes (COs)

| Cos | Description |
|--------------------|--|
| M23BCS605.1 | Conduct a comprehensive literature survey and synthesize key findings. |
| M23BCS605.2 | Define a research problem statement based on literature review. |
| M23BCS605.3 | Develop and present a well-structured project report. |

CO-PO-PSO Mapping

| COs/POs | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 | PSO1 | PSO2 |
|--------------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|------|------|
| M23BCS605.1 | 3 | 3 | - | 3 | - | 3 | - | - | - | - | - | - | 3 | 3 |
| M23BCS605.2 | - | 3 | 3 | - | 3 | - | - | 3 | - | - | - | - | 3 | 3 |
| M23BCS605.3 | 3 | - | 3 | 3 | - | - | 3 | - | 3 | 3 | 3 | 3 | 3 | 3 |
| M23BCS605 | 3 | 3 | 3 | 3 | 3 | 3 | 3 | 3 | 3 | 3 | 3 | 3 | 3 | 3 |

8. Future with this Subject

This phase equips students with essential research and analytical skills, forming the foundation for the practical work in Phase II. It also enhances their technical writing and presentation abilities, which are critical for their final year projects and professional careers.

| | | |
|--------------------------------|---|-------------------|
| 6th Semester | Professional Core Laboratory(PCL) Machine Learning Lab | M23BCSL606 |
|--------------------------------|---|-------------------|

1. Prerequisites

| S/L | Proficiency | Prerequisites |
|-----|-------------|---------------|
|-----|-------------|---------------|

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|----|--|--|
| 1. | Foundational Programming in Python. | <ul style="list-style-type: none"> • Understanding data types (integers, floats, strings, lists, dictionaries) • Control flow (loops, conditional statements) • Functions, Basic file handling. |
| 2. | Working with Data using Pandas | <ul style="list-style-type: none"> • Loading data from files (CSV, etc.) • Dataframe manipulation (selecting columns, filtering rows, adding/removing data) • Handling missing values. |
| 3. | Data Visualization Basics | <ul style="list-style-type: none"> • Creating plots using Matplotlib or Seaborn (histograms, scatter plots, bar charts, etc.) • Customizing plots (labels, titles, legends). |
| 4. | Core Mathematical Concepts | <ul style="list-style-type: none"> • Basic linear algebra (vectors, matrices, linear equations - at a conceptual level) • Basic probability and statistics (mean, variance, probability distributions, conditional probability). |
| 5. | Introduction to Machine Learning Concepts. | <ul style="list-style-type: none"> • Understanding of the machine learning process (training data, testing data, model building, evaluation) • Familiarity with the types of machine learning (supervised, unsupervised). |

2. Competencies

| S/L | Competency | KSA Description |
|-----|------------------------------|--|
| 1 | Data Fluency and Exploration | <p>Knowledge:</p> <ul style="list-style-type: none"> • Understanding of various data types (numerical, categorical, text) and their characteristics. • Awareness of data quality issues and common data cleaning techniques. • Familiarity with key descriptive statistics and visualization methods. <p>Skills:</p> <ul style="list-style-type: none"> • Ability to load, clean, transform, and visualize data using Python libraries like Pandas and Matplotlib/Seaborn. • Skill in identifying patterns, trends, and potential relationships within datasets. <p>Attitudes:</p> <ul style="list-style-type: none"> • Appreciation for the importance of data quality and its impact on ML model performance. • Curiosity and a data-driven mindset when approaching problems. |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|---|--------------------------------|--|
| 2 | Supervised Learning Techniques | <p>Knowledge:</p> <ul style="list-style-type: none"> • Understanding of supervised learning principles, including regression and classification. • Familiarity with common algorithms: Linear Regression, Logistic Regression, Decision Trees, Random Forests. • Knowledge of model evaluation metrics (e.g., MSE, accuracy, precision, recall, F1-score). <p>Skills:</p> <ul style="list-style-type: none"> • Ability to build, train, and evaluate supervised learning models using scikit-learn or similar libraries. • Skill in tuning hyper parameters to optimize model performance. • Ability to interpret model results and communicate findings effectively. <p>Attitudes:</p> <ul style="list-style-type: none"> • Critical thinking when selecting and evaluating models, considering bias-variance trade-offs. |
|---|--------------------------------|--|

| | | |
|---|------------------------------------|---|
| 3 | Unsupervised Learning Techniques | <p>Knowledge:</p> <ul style="list-style-type: none"> Understanding of clustering and dimensionality reduction techniques. Familiarity with algorithms like k-Means Clustering and Principal Component Analysis (PCA). <p>Skills:</p> <ul style="list-style-type: none"> Ability to apply clustering to discover patterns and group similar data points. Skill in using dimensionality reduction to visualize high-dimensional data and improve model efficiency. <p>Attitudes:</p> <ul style="list-style-type: none"> Openness to exploring data without predefined labels. Understanding the value of uncovering hidden structures and relationships within data. |
| 4 | Reinforcement Learning Foundations | <p>Knowledge:</p> <ul style="list-style-type: none"> Basic understanding of reinforcement learning concepts (agents, environments, rewards, policies). Introduction to Q-learning or other fundamental RL algorithms. Ability to implement a simple Q-learning agent in a simulated environment. <p>Skills:</p> <p>Attitudes:</p> <ul style="list-style-type: none"> Interest in the potential of learning through trial and error. |

3. Syllabus

| Machine Learning Laboratory SEMESTER – VI | | | |
|---|------------|-------------|-----|
| Course Code | M23BCSL606 | CIE Marks | 50 |
| Number of Lecture Hours/Week(L: T: P: S) | (0:0:2:0) | SEE Marks | 50 |
| Total Number of Lecture Hours | 24 Hours | Total Marks | 100 |
| Credits | 01 | Exam Hours | 03 |
| <p>Course Objectives:</p> <ol style="list-style-type: none"> Master fundamental machine learning concepts and algorithms across various paradigms (supervised, unsupervised, reinforcement). Develop proficiency in implementing and evaluating ML models using Python and relevant libraries. Cultivate a data-driven approach to problem-solving through exploration, visualization, and insight generation. Critically evaluate ML model performance, considering factors beyond accuracy and selecting appropriate models for diverse tasks. Promote a spirit of exploration, independent learning, and continuous growth in the ever-evolving field of machine learning. | | | |
| <p>1: Data Exploration and Visualization</p> <p>Aim: Familiarize with basic data loading, cleaning, and visualization techniques.</p> <p>Question: Analyze a dataset of your choice (e.g., Iris dataset, Titanic dataset) to identify patterns and relationships between variables.</p> <p>Dataset:</p> <p>Iris: https://www.kaggle.com/datasets/uciml/iris Titanic: https://www.kaggle.com/c/titanic.</p> | | | |
| <p>2: Data Preprocessing Pipeline</p> <p>Aim: Build a data preprocessing pipeline to handle missing values, categorical data, and feature scaling.</p> <p>Question: Prepare a dataset for a machine learning task. Implement techniques like imputation, one-hot encoding, and standardization/normalization.</p> <p>Dataset: Use the same dataset from Program 1 or a different one with similar characteristics.</p> | | | |

3: Implementing k-Nearest Neighbors

Aim: Understand and implement the k-NN algorithm for classification.

Question: Build a k-NN classifier to predict the species of iris flowers based on sepal and petal measurements. Experiment with different values of 'k'.

Dataset: Iris dataset.

4: Linear Regression for Prediction

Aim: Apply linear regression to predict a continuous target variable.

Question: Build a linear regression model to predict housing prices based on features like area, number of bedrooms, and location.

Dataset:

Boston Housing: <https://www.kaggle.com/datasets/vikrishnan/boston-house-prices>

California Housing: https://scikit-learn.org/stable/datasets/real_world.html#california-housing-dataset

5: Logistic Regression for Classification

Aim: Use logistic regression for binary or multi-class classification.

Question: Build a logistic regression model to predict whether a customer will click on an ad based on demographics and browsing history.

Dataset: You can simulate this type of dataset or find related advertising datasets on Kaggle.

6: Comparing Regression Models

Aim: Compare the performance of different regression models on a given dataset.

Question: Evaluate and compare linear regression, polynomial regression, and Ridge/Lasso regression for a prediction task of your choice.

Dataset: Use a dataset suitable for regression, potentially from previous programs.

7: Decision Tree Classification

Aim: Visualize and interpret decision tree models.

Question: Build a decision tree classifier to predict customer churn based on service usage patterns and account information. Visualize the tree and analyze feature importance.

Dataset: You can simulate a churn dataset or search for "telecom churn" datasets.

8: Ensemble Methods - Random Forest

Aim: Apply the Random Forest algorithm and evaluate its performance.

Question: Build a Random Forest classifier for a classification task. Tune hyperparameters (e.g., number of trees) to optimize performance.

Dataset: Choose a dataset suitable for classification, possibly from a previous program.

9: Naive Bayes for Text Classification

Aim: Implement the Naive Bayes algorithm for text data.

Question: Build a spam email classifier using the Naive Bayes algorithm.

Dataset: Spambase: <https://archive.ics.uci.edu/ml/datasets/Spambase>

Other text datasets: <https://www.kaggle.com/datasets?tags=text>

10: Customer Segmentation with K-Means Clustering

Aim: Apply clustering to group similar data points.

Question: Segment customers based on their purchasing behavior (e.g., RFM: Recency, Frequency, Monetary value) using k-means clustering. Visualize the clusters.

Dataset: Simulate a customer purchase dataset or use a retail dataset with transaction history.

11: Dimensionality Reduction with PCA

Aim: Reduce data dimensionality while preserving important information.

Question: Apply PCA to a dataset with a high number of features (e.g., images, text) and visualize the data in a lower-dimensional space.

Dataset:

MNIST Handwritten Digits (image): <http://yann.lecun.com/exdb/mnist/>

20 Newsgroups (text): https://scikit-learn.org/stable/datasets/real_world.html#the-20-newsgroups-text-dataset

12: Introduction to Q-Learning**Aim:** Implement a basic reinforcement learning algorithm.**Question:** Use Q-learning to train an agent to navigate a simple grid-world environment and find an optimal path to a goal.**Dataset:** No external dataset is needed. You'll create a grid environment within your code (e.g., using Python lists).**TEXTBOOK:**

Prescribed Textbooks:

1. Hands-On Machine Learning with Scikit-Learn, Keras, and TensorFlow" by Aurélien Géron (3rd Edition)

| S/L | Syllabus Timeline | Description |
|-----|---|--|
| 1 | Week-1 Data Exploration and Visualization | Lecture: Introduction to Machine Learning, Types of Learning, Applications, Python for ML Lab: Program 1 - Data Exploration and Visualization |
| 2 | Week-2 Data Preprocessing | Lecture: Data Preprocessing Techniques (handling missing values, encoding categorical data, feature scaling) Lab: Program 2 - Data Preprocessing Pipeline |
| 3 | Week 3 k-Nearest Neighbours | Lecture: Distance Metrics, k-NN Algorithm, Model Evaluation (accuracy, confusion matrix) Lab: Program 3 - Implementing k-Nearest Neighbors |
| 4 | Week 4 Linear Regression | Lecture: Linear Regression Fundamentals, Cost Functions, Gradient Descent (Conceptual), Simple Linear Regression Lab: Program 4 - Linear Regression for Prediction |
| 5 | Week 5 Multiple Linear Regression & Logistic Regression | Lecture: Multiple Linear Regression, Assumptions of Linear Regression, Feature Selection, Introduction to Classification Lab: Program 5 - Logistic Regression for Classification. |
| 6 | Week 6 Model Evaluation & Comparison (Regression) | Lecture: Overfitting and Underfitting, Bias-Variance Trade-off, Regularization (Ridge, Lasso) Lab: Program 6 - Comparing Regression Models. |
| 7 | Week 7: Decision Trees | Lecture: Decision Tree Learning, Entropy, Information Gain, Visualizing Decision Trees Lab: Program 7 - Decision Tree Classification |
| 8 | Week 8: Ensemble Methods | Lecture: Ensemble Learning Concepts (Bagging, Boosting), Random Forests Lab: Program 8 - Ensemble Methods - Random Forest. |
| 9 | Week 9: Naive Bayes & Text Preprocessing | Lecture: Bayes' Theorem, Naive Bayes Classifier, Text Preprocessing Techniques (Tokenization, Stop Words). Lab: Program 9 - Naive Bayes for Text Classification. |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|-----------|---|---|
| 10 | Week 10: Unsupervised Learning: Clustering | Lecture: Introduction to Unsupervised Learning, Clustering Algorithms, k-Means Clustering Lab: Program 10 - Customer Segmentation with k-Means Clustering. |
| 11 | Week 11: Dimensionality Reduction | Lecture: Curse of Dimensionality, Feature Extraction, Principal Component Analysis (PCA) Lab: Program 11 - Dimensionality Reduction with PCA |
| 12 | Week 12: Introduction to Reinforcement Learning | Lecture: Fundamentals of Reinforcement Learning, Q-Learning Lab: Program 12 - Introduction to Q-Learning. |

5. Teaching-Learning Process Strategies

| S/L | TLP Strategies: | Description |
|-----|-----------------------------|---|
| 1 | Theory-Practice Bridge | Begin each lab with a brief recap of relevant ML concepts from lectures. Prompt students to connect theoretical understanding with the lab's practical implementation. |
| 2 | Scaffolding to Independence | Start with partially completed code templates (scaffolding) for early programs. Gradually reduce scaffolding as labs progress, leading students to write more code independently. |
| 3 | Collaborative Learning | Integrate pair programming, group discussions, and peer code reviews. Encourage students to help each other debug, analyze, and explore alternative approaches. |
| 4 | Interactive Visualizations | Utilize tools like Jupyter Notebooks to encourage interactive data and model exploration. Guide students to create insightful visualizations that deepen their understanding. |
| 5 | Real-World Projects | Group several labs into a larger project using a real-world dataset. This provides context, boosts motivation, and mirrors industry workflows. |

6. Assessment Details (both CIE and SEE)

Marks distribution for Program based Practical Course for CIE

| Sl. No. | Description | % of Marks | In Marks |
|---------|--|--------------------|----------|
| 1 | Observation, write-up, algorithm/program/execution | 80% of the maximum | 80 |
| 2 | Viva-Voce | 20% of the maximum | 20 |
| Total | | 100% | 100 |

Marks scored by the student for 100 are scaled down to 50 marks.

SEE for practical Course (Irrespective of Experiment or program based):

Marks distribution for Experiment based Practical Course for Final CIE

| SL. No. | Description | % of Marks | Marks |
|---------|-----------------------|------------|-------|
| 1 | Write-up, Procedure | 20% | 20 |
| 2 | Conduction and result | 60% | 60 |
| 3 | Viva-Voce | 20% | 20 |
| Total | | 100% | 100 |

- SEE marks for practical course shall be 50 marks
- See for practical course is evaluated for 100 marks and scored marks shall be scaled down to 50 marks.
- Change of experiment/program is allowed only once and 20% marks allotted to the procedure/write-up part to be made zero.
- Duration of SEE shall be 3 hours.

7. Learning Objectives

| S/L | Learning Objectives | Description |
|-----|---|---|
| 1 | Master fundamental ML concepts and algorithms across paradigms. | This objective sets a strong foundation, ensuring students understand not just how to code, but why algorithms work, covering supervised, unsupervised, and reinforcement learning. |
| 2 | Develop proficiency in implementing and evaluating ML models using Python | This focuses on the essential practical skills: coding, using libraries, and assessing model performance. Python is a wise choice given its popularity in the ML community. |
| 3 | Cultivate a data-driven approach | This highlights the importance of data exploration, visualization, and insight generation, which are essential for real-world problem-solving. It's not just about building models blindly. |
| 4 | Critically evaluate ML model performance. | This promotes a deeper understanding of model selection and evaluation. It moves beyond simple accuracy metrics to consider factors like bias-variance trade-off, interpretability, and suitability for specific tasks. |
| 5 | Promote a spirit of exploration | This is crucial in the rapidly evolving field of ML. It encourages students to be lifelong learners, adapt to new technologies, and approach ML with curiosity and a desire for continuous improvement. |

8. Course Outcomes (COs) and Mapping with POs/ PSOs**Course Outcomes (COs)**

| COs | Description |
|---------------------|---|
| M23BCSL606.1 | Prepare data for machine learning by effectively applying preprocessing, feature engineering, and exploratory analysis techniques to diverse datasets. |
| M23BCSL606.2 | Implement a range of machine learning algorithms by successfully building and training supervised and unsupervised learning models in Python, including k-NN, regression, decision trees, random forests, k-means, and PCA. |
| M23BCSL606.3 | Analyze machine learning results by interpreting model outputs, identifying patterns and insights in data, and effectively communicating findings through visualizations and reports. |
| M23BCSL606.4 | Evaluate and select appropriate machine learning models by critically comparing their performance using relevant metrics and considering factors beyond simple accuracy to justify choices for specific tasks. |
| M23BCSL606.5 | Design a basic reinforcement learning agent by developing a Q-learning agent to solve a simple problem in a simulated environment. |

CO-PO-PSO Mapping

| COs/POs | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 | PSO1 | PSO2 |

| Total | 10 | 20 | 20 | 10 | 40 | 100 |

10. Future with this Subject:

- Capstone Projects and Research:** The ML skills gained in this course can prove invaluable for final year projects. Students can leverage this knowledge to optimize robotic systems, analyze sensor data for predictive maintenance, or develop intelligent control algorithms — all empowered by the solid foundation built in this course.
- Advanced Engineering Electives:** Many higher-level electives, such as "Robotics," "Computer Vision," "Data Science," or "Artificial Intelligence," rely heavily on ML concepts. Students who have mastered the fundamentals through this course will be well-prepared to excel in these advanced subjects.
- Data-Driven Decision Making:** Regardless of their specialization, the ability to extract meaningful insights from data is an essential skill for any engineer. This course equips students to make informed, data-driven decisions, analyze trends, and approach complex engineering problems with a data-centric perspective.

Job Prospects:

- High Demand, High Reward:** ML expertise is highly sought after across industries, making it one of the most in-demand skillsets in today's job market. Graduates with a strong foundation in ML will have a competitive edge in securing rewarding and impactful roles.
- Career Versatility:** ML skills are transferable to a wide range of industries and job titles. Potential career paths include Machine Learning Engineer, Data Scientist, AI Specialist, Robotics Engineer, or any position requiring data analysis, predictive modeling, and intelligent system development.
- Future-Proof Skills:** The field of ML is constantly evolving. This course equips graduates with the foundational knowledge and adaptive learning mindset needed to stay ahead of the curve, embrace new advancements, and thrive in a dynamic career landscape.

| 6 th Semester | Ability EnhancementV(AE-V) PROGRESSIVE APP DEVELOPMENT | M23BCS607A |
|--------------------------|---|------------|
|--------------------------|---|------------|

1. Prerequisites

| S/L | Proficiency | Prerequisites |
|-----|---|---|
| 1 | Basic Web Development (HTML, CSS, JavaScript) | <ul style="list-style-type: none"> Proficiency in HTML for structuring content, CSS for styling and layout, and JavaScript for adding interactivity to web pages. Familiarity with modern JavaScript (ES6+ features) is expected. |
| 2 | Understanding of Web Browsers and Networking | <ul style="list-style-type: none"> Knowledge of how web browsers render pages, execute JavaScript, and manage client-server communication. Basic understanding of HTTP/HTTPS protocols and RESTful APIs is required. |
| 3 | Experience with Version Control (Git) | <ul style="list-style-type: none"> Competence in using Git for version control, including operations like commit, branch, merge, and resolve conflicts.. Experience with platforms like GitHub or GitLab is advantageous. |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|---|---|--|
| 4 | Familiarity with Asynchronous JavaScript (AJAX, Promises) | <ul style="list-style-type: none"> Understanding of how to perform asynchronous operations in JavaScript, including making AJAX requests and handling Promises Knowledge of async/await syntax is also beneficial. |
| 5 | Basic Knowledge of Web Application Architecture | <ul style="list-style-type: none"> Understanding of the overall structure and components of web applications, including front-end and back-end interactions, as well as MVC (Model-View-Controller) or MVVM (Model-View-ViewModel) patterns. |
| 6 | Experience with Responsive Design | <ul style="list-style-type: none"> Ability to create responsive web designs that work across different devices and screen sizes. Familiarity with CSS frameworks like Bootstrap or Materialize for building responsive layouts is helpful. |

2. Competencies

| S/L | Competency | KSA Description |
|-----|------------------------------------|---|
| 1 | Understanding PWA Architecture | <p>Knowledge: Acquire comprehensive knowledge of the architecture and components of Progressive Web Apps, including service workers, app shells, caching strategies, and offline capabilities.</p> <p>Skills: Develop the ability to design and structure Progressive Web Apps effectively, ensuring that all components work together seamlessly to provide a smooth user experience.</p> <p>Attitudes: Foster a deep appreciation for the importance of a well-architected PWA and a commitment to adhering to best practices in design and development.</p> |
| 2 | Implementing Offline Functionality | <p>Knowledge: Understand the principles and technologies that enable offline functionality in PWAs, such as service workers, caching mechanisms, and IndexedDB.</p> <p>Skills: Gain the technical expertise to implement and manage service workers, ensuring that web applications can function effectively without an internet connection.</p> <p>Attitudes: Develop a proactive approach to creating resilient web applications that provide a consistent user experience, regardless of network conditions.</p> |
| 3 | Optimizing PWA Performance | <p>Knowledge: Learn the key factors that affect PWA performance, including load times, responsiveness, and efficient resource management.</p> <p>Skills: Master the use of performance optimization tools like Google Lighthouse and techniques such as lazy loading, code splitting, and efficient caching.</p> <p>Attitudes: Cultivate a meticulous attitude towards continuous improvement, always striving to enhance the performance and user experience of web applications.</p> |
| 4 | Ensuring Security in PWAs | <p>Knowledge: Understand the security challenges specific to web applications and PWAs, including data protection, secure communication, and threat prevention.</p> <p>Skills: Develop the skills to implement security best practices, such as HTTPS, secure data handling, and protection against common web vulnerabilities like XSS and CSRF.</p> <p>Attitudes: Adopt a security-first mindset, prioritizing user data and privacy in all development decisions.</p> |

| | | |
|---|--------------------------------------|--|
| | | Install a security-first mindset, prioritizing the protection of user data and the integrity of the web application in every aspect of development. |
| 5 | Advanced PWA Features and Deployment | <p>Knowledge: Gain in-depth knowledge of advanced PWA features, such as push notifications, background sync, and IndexedDB, along with deployment strategies for live environments.</p> <p>Skills: Develop the ability to integrate these advanced features into PWAs and manage the deployment process, ensuring that the application is accessible and installable across devices.</p> <p>Attitudes: Embrace a forward-thinking approach, eager to explore and implement the latest PWA features and deployment practices to enhance the reach and functionality of web applications.</p> |

3. Syllabus

| Progressive App Development SEMESTER – VI | | | |
|---|--------------------|-------------|-----|
| Course Code | M23BCS607A | CIE Marks | 50 |
| Number of Lecture Hours/Week(L: T: P: S) | (0:0:2:0) | SEE Marks | 50 |
| Total Number of Lecture Hours | 24 hours Practical | Total Marks | 100 |
| Credits | 01 | Exam Hours | 02 |
| Course Objectives: 1. Understand and Apply Core Web Technologies. 2. Develop and Implement Service Workers 3. Optimize Web Application Performance 4. Enhance Web Applications with Advanced Features 5. Deploy and Secure Progressive Web Apps | | | |
| Program -1 | | | |
| Create a basic web page with HTML, Style the page using CSS for a responsive layout, Add interactivity using JavaScript. | | | |
| Program -2 | | | |
| Register a service worker; Create a service worker script that caches static assets, Test the service worker by loading the app offline. | | | |
| Program -3 | | | |
| Create an app shell structure with HTML and CSS, Implement lazy loading for content within the app shell, Ensure the app shell loads quickly, even on slow networks. | | | |
| Program -4 | | | |
| Implement a Cache-First strategy for static assets, Implement a Network-First strategy for dynamic content, Test and compare the performance of each strategy. | | | |
| Program -5 | | | |
| Set up IndexedDB in the web application, Store form data in IndexedDB when offline, Sync the data with a remote server when the network is available. | | | |

| Program -6 |
|--|
| Set up push notifications using the Push API, Customize notification appearance and behaviour, Handle notification clicks and interactions. |
| Program -7 |
| Audit the web application using Lighthouse, Identify performance bottlenecks and areas for improvement, Implement optimizations. Optimize the performance of a PWA using Lighthouse. |
| Program -8 |
| Test the application on multiple browsers, Implement feature detection to provide fallbacks for unsupported features; Ensure the application is accessible and inclusive. |
| Program -9 |
| Set up HTTPS for the local development environment, Secure service workers and sensitive data transmissions, Test the application for common security vulnerabilities. |
| Program -10 |
| Set up routing for a Single Page Application (SPA), Implement state management using a library, Handle navigation and state changes efficiently. |
| Program -11 |
| Prepare the PWA for production, Deploy the application on a hosting platform, Make the PWA installable and test the installation process on different devices. |
| Program -12 |
| Develop the PWA using best practices for service workers, caching, offline functionality, and performance optimization. Test and deploy the PWA, ensuring it meets all PWA criteria. |
| Developed using common web technologies including HTML, CSS, JavaScript, and WebAssembly with any platform with a standards-compliant browser, including desktop and mobile devices |
| TEXTBOOKS: |
| 1. Building Progressive Web Apps by Tal Ater, O'Reilly Media 2. Dean Hume, "Progressive Web Apps", Apress 1st Edition (2017) |
| REFERENCE BOOKS: |
| 1. <i>Learning Progressive Web Apps</i> by John M. Wargo, Addison-Wesley Professional |
| 2. <i>JavaScript: The Definitive Guide</i> by David Flanagan, , O'Reilly Media |
| 3. <i>Adaptive Web Design: Crafting Rich Experiences with Progressive Enhancement</i> by Aaron Gustafson, New Riders |

4. Syllabus Timeline

| S/L | Syllabus Timeline | Description |
|-----|---|---|
| 1 | Week 1: Introduction to Progressive Web Apps | Overview of PWAs Key components: service workers, caching, app shell Lab: Set up a basic web application project |
| 2 | Week 2: HTML & CSS Fundamentals | Structure and styling of web applications Responsive design principles Lab: Create a responsive layout for a PWA |
| 3 | Week 3: JavaScript Basics for PWAs | Core JavaScript concepts and ES6 features Introduction to JavaScript in web development Lab: Implement interactive features using JavaScript |
| 4 | Week 4: Introduction to Service Workers | Understanding service workers and their role Basics of service worker registration and installation Lab: Implement a basic service worker to cache assets |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|----|---|--|
| 5 | Week 5: Advanced Service Workers | Handling fetch events and caching strategies Managing updates and background sync Lab: Implement advanced caching strategies and background sync |
| 6 | Week 6: Offline Functionality and Data Storage | Using IndexedDB for offline storage Understanding data persistence in PWAs Lab: Implement IndexedDB for storing user data offline |
| 7 | Week 7: | Introduction to push notifications Implementing push notifications and managing permissions Lab: Set up push notifications in a PWA |
| 8 | Week 8: Performance Optimization | Techniques for optimizing PWA performance Using tools like Google Lighthouse Lab: Analyze and optimize a PWA's performance using Lighthouse |
| 9 | Week 9: Security in PWAs | Ensuring security in web applications Implementing HTTPS and secure data handling Lab: Secure a PWA with HTTPS and review security best practices |
| 10 | Week 10: Design and UX | Best practices for user experience and design Designing a seamless and engaging PWA interface for PWAs Lab: Design an engaging user interface for a PWA |
| 11 | Week 11: Deployment Strategies | Deploying PWAs to live environments Managing updates and version control Lab: Deploy a PWA to a cloud platform and manage updates |
| 12 | Week 12: Project | Final project presentations Peer reviews and feedback |
| | Presentation and Review | Course wrap-up and discussion Lab: Present final PWA projects and receive peer feedback |

5. Teaching-Learning Process Strategies

| S/L | TLP Strategies: | Description |
|-----|-----------------------------|--|
| 1 | Assign real-world projects | Assign real-world projects where students design and develop Progressive Web Apps. |
| 2 | Interactive Workshops | Conduct workshops that involve coding sessions and live demonstrations. Focus on specific aspects like service worker setup, caching strategies, or performance optimization, and encourage students to work through exercises in real-time.. |
| 3 | Case Studies and Examples | Present case studies of successful Progressive Web Apps and analyze their features and implementations. |
| 4 | Peer Reviews and Group Work | Facilitate peer review sessions where students present their projects and provide feedback to each other. Encourage group work on lab assignments to foster collaboration and diverse problem-solving approaches. |
| 5 | Tutorials and Guided Labs | Provide step-by-step tutorials and guided lab sessions for complex topics like implementing push notifications or optimizing performance. |
| 6 | Tool-Based Learning | Integrate tools and platforms such as Google Lighthouse for performance auditing and code editors for development. |

6. Assessment Details (both CIE and SEE)

Class Work:-A

CIE Split up for Laboratory based Ability Enhancement Course

| SL. No. | Description | % of Marks | In Marks |
|---------|-------------|------------|----------|
|---------|-------------|------------|----------|

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | | |
|--------------|--|-------------|-----------|
| 1 | Write-up, Conduction, result and Procedure | 60% | 30 |
| 2 | Viva-Voce | 40% | 20 |
| Total | | 100% | 50 |

The Test marks should be scaled down to 30marks (60% of the maximum Marks)

Laboratory Test: -B

CIE Split up for Test in Laboratory based Ability Enhancement Course(AE)

| SL. No. | Description | % of Marks | In Marks |
|--------------|--|-------------|-----------|
| 1 | Write-up, Conduction, result and Procedure | 60% | 30 |
| 2 | Viva-Voce | 40% | 20 |
| Total | | 100% | 50 |

The Test marks should be scaled down to 20marks (40% of the maximum Marks)

Final CIE for Laboratory based Ability Enhancement Course(AE)

| SL. No. | Description | % of Marks | In Marks |
|--------------|---------------------------------------|--------------------|-----------|
| 1 | Scaled Down marks of record/journal-A | 60% of the maximum | 30 |
| 2 | Scaled Down marks of test B | 40% of the maximum | 20 |
| Total | | 100% | 50 |

Final CIE Marks =(A) + (B)

SEE for practical Course:

| SL. No. | Description | % of Marks | Marks |
|--------------|-----------------------|-------------|------------|
| 1 | Write-up, Procedure | 20% | 20 |
| 2 | Conduction and result | 60% | 60 |
| 3 | Viva-Voce | 20% | 20 |
| Total | | 100% | 100 |

1. SEE marks for practical course shall be 50 marks
2. SEE for practical course is evaluated for 100 marks and scored marks shall be scaled down to 50 marks.
3. Change of experiment/program is allowed only once and 20% marks allotted to the procedure/write-up part to be made zero.
4. Duration of SEE shall be 3 hours.

7. Learning Objectives

| S/L | Learning Objectives | Description |
|-----|--------------------------------------|---|
| 1 | Understand PWA Fundamentals | Learn the core concepts and components of Progressive Web Apps, including service workers, caching, and offline functionality. |
| 2 | Implement Service Workers | Develop the ability to create and configure service workers to manage caching strategies and enable offline access in web applications. |
| 3 | Utilize Advanced Features | Integrate advanced PWA features such as push notifications, IndexedDB for offline storage, and background synchronization into web applications. |
| 4 | Optimize Web Application Performance | Analyze and apply performance optimization techniques using tools like Google Lighthouse to improve the speed and efficiency of Progressive Web Apps. |

| | | |
|---|---------------------------------|--|
| 5 | Ensure Web Application Security | Implement security best practices and HTTPS to protect Progressive Web Apps from vulnerabilities and ensure secure data handling. |
| 6 | Deploy and Test PWAs | Design, deploy, and test Progressive Web Apps in real-world environments, ensuring they meet performance, accessibility, and usability standards. |

8. Course Outcomes (COs) and Mapping with POs/ PSOs

Course Outcomes (COs)

| COs | Description |
|--------------|---|
| M23BCS607A.1 | Understand and apply the key elements of Progressive Web Apps, such as service workers and caching. |
| M23BCS607A.2 | Analyse the working of service workers and caching to improve offline functionality and performance. |
| M23BCS607A.3 | Implement service workers and caching strategies to build functional Progressive Web Apps. |
| M23BCS607A.4 | Evaluate and optimize PWA performance and security using tools like Google Lighthouse. |
| M23BCS607A.5 | Design and deploy a complete Progressive Web App with advanced features like push notifications and IndexedDB. |

CO-PO-PSO Mapping

| COs/POs | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 | PSO1 | PSO2 |
|--------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|------|------|
| M23BCS607A.1 | 3 | - | - | - | - | - | - | - | - | - | - | - | 3 | - |
| M23BCS607A.2 | - | 3 | - | - | - | - | - | - | - | - | - | - | - | 3 |
| M23BCS607A.3 | - | - | 3 | - | - | - | - | - | - | - | - | - | 3 | - |
| M23BCS607A.4 | - | - | - | 3 | - | - | - | - | - | - | - | - | - | 3 |
| M23BCS607A.5 | - | - | - | - | 3 | - | - | - | - | - | - | - | 3 | 3 |
| M23BCS607A | 3 | 3 | 3 | 3 | 3 | - | - | - | - | - | - | - | 3 | 3 |

9. Assessment Plan

Continuous Internal Evaluation (CIE)

| | CO1 | CO2 | CO3 | CO4 | CO5 | Total |
|-----------------|-----|-----|-----|-----|-----|-------|
| Program 1 to 12 | 5 | 10 | 10 | 5 | 20 | 50 |
| Total | 5 | 10 | 10 | 5 | 20 | 50 |

Semester End Examination (SEE)

| | CO1 | CO2 | CO3 | CO4 | CO5 | Total |
|-----------------|-----|-----|-----|-----|-----|-------|
| Program 1 to 12 | 10 | 20 | 20 | 10 | 40 | 100 |
| Total | 10 | 20 | 20 | 10 | 40 | 100 |

10. Future with this Subject:

- ✦ **Career Opportunities:** With expertise in PWAs, you can work as a front-end or full-stack web developer. Many companies are looking to create PWAs to enhance user experiences, especially on mobile devices.
- ✦ **Technical Growth:** Understanding PWAs will naturally lead you to explore other advanced web technologies, such as WebAssembly, Progressive Enhancement, or server-side rendering (SSR). The skills gained from PWA development can be applied to other cross-platform frameworks like React Native,

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

Flutter, or Ionic, allowing you to build applications that work seamlessly across both web and mobile platforms.

- ✦ **Industry Trends:** The industry is increasingly adopting PWAs due to their ability to deliver app-like experiences directly through the web. Your skills will be in demand as more businesses look to create or convert their existing websites into PWAs. Staying current with web standards and best practices will be crucial, as PWAs are part of the broader trend towards making the web more powerful, reliable, and engaging.
- ✦ **Continuous Learning:** With a solid foundation in PWAs, you might explore advanced frameworks and libraries like React, Angular, or Vue.js, which are often used to build sophisticated PWAs. As you move forward, learning about continuous integration/continuous deployment (CI/CD) practices, cloud services, and containerization (e.g., Docker) could be the next step in your technical growth.
- ✦ **Mastering Analytics and Monitoring:** Understanding user behavior through analytics and implementing monitoring tools (e.g., Google Analytics, Firebase) will allow you to continually improve the performance and user engagement of your PWAs.

| | | |
|--------------------------------|--|-------------------|
| 6th Semester | Ability EnhancementV(AE-V) Devops | M23BCS607B |
|--------------------------------|--|-------------------|

1. Prerequisites

| S/L | Proficiency | Prerequisites |
|----------|---|--|
| 1 | Basic Understanding of Programming and Scripting Languages | <ul style="list-style-type: none"> Knowledge of programming fundamentals and experience with at least one scripting language (e.g., Python, JavaScript) is required to create automation scripts, work with Selenium WebDriverIO, and write scripts for Maven and Docker. |
| 2 | Familiarity with Command Line Interfaces (CLI) | <ul style="list-style-type: none"> Proficiency in using command-line tools like GitBash or terminal commands is essential for interacting with Git, executing Docker commands, and managing CI/CD pipelines.. |
| 3 | Introduction to Software Development Life Cycle (SDLC) | <ul style="list-style-type: none"> A foundational understanding of the software development life cycle and its various stages will help students grasp the context of continuous integration, continuous deployment, and Agile methodologies used in DevOps practices. |

| | | |
|---|---|--|
| 4 | Basic Knowledge of Web Development and HTML/CSS | <ul style="list-style-type: none"> Familiarity with web technologies such as HTML and CSS is necessary for creating and understanding XPath expressions for locating elements in web applications during automation testing.. |
| 5 | Experience with Integrated Development Environments (IDEs) and Build Tools | <ul style="list-style-type: none"> Prior experience working with IDEs (e.g., IntelliJ IDEA, Eclipse) and build tools like Maven will be beneficial for managing project dependencies, building projects, and integrating with Jenkins for CI/CD.. |

2. Competencies

| S/L | Competency | KSA Description |
|-----|---|--|
| 1 | Proficient Use of Version Control Systems | <p>Knowledge: Understand the principles and best practices of version control, including branching, merging, and conflict resolution..</p> <p>Skills: Ability to create, manage, and collaborate on projects using Git, GitHub, and GitBash, including advanced operations like rebasing and resolving merge conflicts.</p> <p>Attitudes: Cultivate a disciplined approach to version control, emphasizing the importance of clear commit messages, regular updates, and collaborative workflows.</p> |
| 2 | Mastery of Continuous Integration and Automation Tools | <p>Knowledge: Understand the fundamentals of continuous integration, continuous deployment, and automation in a DevOps environment.</p> <p>Skills: Ability to configure and manage Jenkins pipelines, automate project execution, and apply various scheduling techniques within a CI/CD framework.</p> <p>Attitudes: Develop a proactive mindset towards automation, recognizing its role in improving efficiency, reducing errors, and ensuring consistent project delivery.</p> |
| 3 | Advanced Automation and Testing Techniques | <p>Knowledge: Comprehend the role of automated testing in software development, including the use of Selenium WebdriverIO and XPath.</p> <p>Skills: Ability to write and execute test scripts using Selenium WebdriverIO, effectively locate elements in web applications using different XPath strategies, and integrate with reporting tools for comprehensive test coverage.</p> <p>Attitudes: Foster an attention to detail and thoroughness in testing, emphasizing the importance of accuracy and reliability in automated testing processes.</p> |
| 4 | Integration of Build and Deployment Technologies | <p>Knowledge: Understand the lifecycle of software builds and deployments, including the use of Maven, Docker, and Jenkins.</p> <p>Skills: Ability to apply Maven lifecycle commands, create Docker containers, and integrate these tools with Jenkins to streamline the build and deployment processes.</p> <p>Attitudes: Embrace a continuous improvement mindset, focusing on optimizing build and deployment processes for speed, efficiency, and reliability.</p> |

| | | |
|---|--|--|
| 5 | Effective Application of Agile and DevOps Practices | <p>Knowledge: Grasp the principles of Agile methodologies and DevOps practices, including backlog management, sprint planning, and the integration of various DevOps tools.</p> <p>Skills: Ability to create and manage project backlogs, sprints, and tasks using Agile techniques, retrieve and manipulate data using JQuery, and integrate multiple DevOps tools into a cohesive framework.</p> <p>Attitudes: Develop a collaborative and adaptable approach to project management, valuing teamwork, continuous feedback, and the iterative nature of Agile and DevOps practices.</p> |
|---|--|--|

3. Syllabus

| DEVOPS SEMESTER – VI | | | |
|--|-------------------|-------------|------------|
| Course Code | M23BCS607B | CIE Marks | 50 |
| Number of Lecture Hours/Week(L: T: P: S) | (0:0:2:0) | SEE Marks | 50 |
| Total Number of Lecture Hours | 24 Hours | Total Marks | 100 |
| Credits | 01 | Exam Hours | 02 |
| Course Objectives: <ol style="list-style-type: none"> 1. Understanding and Application of Version Control Systems. 2. Mastering Continuous Integration and Automation. 3. Proficient Use of Automation Tools for Web Application Testing. 4. Integration and Management of Build and Deployment Pipelines 5. Implementation of Agile and DevOps Practices in Project Management. | | | |
| Program -1 | | | |
| Demonstrate and Create project in local and remote repository using git and GitBash. | | | |
| Program -2 | | | |
| Demonstrate and apply fork, merge, conflict and rebase concepts on repo using GitHub. | | | |
| Program -3 | | | |
| Demonstrate the process of interfacing the repo using Jenkins to automate the project execution. | | | |
| Program -4 | | | |
| Create a repository and apply different types of scheduling using continuous integration tool. | | | |
| Program -5 | | | |
| Create a script to automate the operation using selenium WebDriverIO and integrate with reporting tools. | | | |
| Program -6 | | | |
| Create a script using different types of XPath and locate elements in an application. | | | |
| Program-7 | | | |
| Apply maven life cycle commands on project and integrate with Jenkins tools | | | |
| Program-8 | | | |
| Apply basic commands for Dockers and integrate with other tools. | | | |
| Program-9 | | | |
| Create and apply backlogs, sprints, tasks for project and retrieve data using J-query. | | | |
| Program-10 | | | |

Create a Framework and integrate different DevOps tools for an application.

TEXTBOOKS:

- 1."Pro Git" by Scott Chacon and Ben Straub Available for free online.
2. "Continuous Delivery: Reliable Software Releases through Build, Test, and Deployment Automation" by Jez Humble and David Farley

REFERENCE BOOKS:

- 1."Selenium WebDriver 3 Practical Guide" by Unmesh Gundecha
- 2."Docker: Up & Running: Shipping Reliable Containers in Production" by Karl Matthias and Sean P. Kane

4. Syllabus Timeline

| S/L | Syllabus Timeline | Description |
|-----|---|--|
| 1 | Week 1: Introduction to Version Control and Git | Demonstrate and Create Project in Local and Remote Repository Using Git and GitBash Introduction to Git, setting up GitBash, creating local repositories, initializing remote repositories, and pushing code. Lab/Practice: Set up a Git repository, commit changes, and push them to GitHub. |
| 2 | Week 2: Advanced Git Concepts | Demonstrate and Apply Fork, Merge, Conflict, and Rebase Concepts on Repo Using GitHub Forking repositories, branching, merging, handling conflicts, and rebasing. Lab/Practice: Fork a repository, create a branch, make changes, merge, and resolve conflicts. |
| 3 | Week 3: Introduction to Jenkins and CI/CD | Demonstrate the Process of Interfacing the Repo Using Jenkins to Automate the Project Introduction to Jenkins, setting up a Jenkins server, and creating a basic CI/CD pipeline. Lab/Practice: Set up Jenkins, integrate it with a GitHub repository, and create an automated build. |
| 4 | Week 4: Advanced Jenkins and Scheduling | Create a Repository and Apply Different Types of Scheduling Using Continuous Integration Tools. Jenkins scheduling, cronjobs, and different scheduling strategies in CI/CD pipelines. Lab/Practice: Implement scheduling in Jenkins pipelines, using cron expressions for various tasks. |
| 5 | Week 5: Introduction to Selenium and Automation Scripting | Create a Script to Automate the Operation Using Selenium WebDriverIO and Integrate with Reporting Tools Introduction to Selenium WebDriverIO, writing basic test scripts, and integrating with reporting tools Lab/Practice: Write Selenium scripts using WebDriverIO, automate a basic web operation, and generate reports. |
| 6 | Week 6: XPath Strategies in Web Automation | Create a Script Using Different Types of XPath and Locate Elements in an Application Understanding XPath, types of XPath, and strategies for locating web elements. Lab/Practice: Create and run test scripts using different XPath strategies in a sample web application. |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|----|--|--|
| 7 | Week 7: Build Management with Maven | Apply Maven Life Cycle Commands on Project and Integrate with Jenkins Tools Introduction to Maven, Maven lifecycle phases, and integrating Maven with Jenkins. Lab/Practice: Create a Maven project, execute Maven lifecycle commands, and integrate with Jenkins for builds. |
| 8 | Week 8: Containerization with Docker | Apply Basic Commands for Docker and Integrate with Other Tools Introduction to Docker, Docker commands, containerization, and integration with CI/CD tools. |
| | | Lab/Practice: Create and manage Docker containers, and integrate Docker with Jenkins in a CI/CD pipeline. |
| 9 | Week 9: Agile Methodologies and Project Management | Create and Apply Backlogs, Sprints, Tasks for Project and Retrieve Data Using JQuery. Agile methodologies, managing backlogs and sprints, using JIRA or similar tools, and using JQuery for data manipulation. Lab/Practice: Set up a project in an Agile tool, create and manage sprints and tasks, and retrieve data using JQuery. |
| 10 | Week 10: DevOps Framework and Tool Integration | Create a Framework and Integrate Different DevOps Tools for an Application Overview of DevOps frameworks, integrating tools like Jenkins, Docker, Maven, and Selenium into a cohesive CI/CD pipeline. Lab/Practice: Develop and demonstrate a full CI/CD pipeline integrating multiple DevOps tools in a project framework. |

5. Teaching-Learning Process Strategies

| S/L | TLP Strategies: | Description |
|-----|---|--|
| 1 | Project-Based Learning (PBL) | Integrate hands-on projects that align with each week's topics. Integrate hands-on projects that align with each week's topics. |
| 2 | Collaborative Learning and Peer Reviews | Encourage collaboration among students through pair programming, group tasks, and peer reviews. Organize students into small teams to work on projects, and incorporate peer review sessions where students evaluate each other's code, Git workflows, and automation scripts. |
| 3 | Flipped Classroom | Use the flipped classroom model, where students study theoretical content through videos and readings before class, and spend in-class time engaging in hands-on activities, discussions, and problem-solving. |
| 4 | Incremental and Iterative Learning | Teach concepts incrementally, building complexity over time. Start with foundational concepts like Git basics and gradually introduce more advanced topics like Jenkins integration, Docker commands, and full DevOps toolchain integration. |
| 5 | Continuous Assessment and Feedback | Implement continuous assessment methods that include quizzes, coding challenges, and mini-projects. Conduct regular assessments such as short quizzes on Git commands, Jenkins pipelines, and Docker basics. |

6. Assessment Details (both CIE and SEE)

Class Work:-A

CIE Split up for Laboratory based Ability Enhancement Course

| SL. No. | Description | % of Marks | In Marks |
|--------------|--|-------------|-----------|
| 1 | Write-up, Conduction, result and Procedure | 60% | 30 |
| 2 | Viva-Voce | 40% | 20 |
| Total | | 100% | 50 |

The Test marks should be scaled down to 30 marks (60% of the maximum Marks)

Laboratory Test: -B**CIE Split up for Test in Laboratory based Ability Enhancement Course**

| SL. No. | Description | % of Marks | In Marks |
|--------------|--|-------------|-----------|
| 1 | Write-up, Conduction, result and Procedure | 60% | 30 |
| 2 | Viva-Voce | 40% | 20 |
| Total | | 100% | 50 |

The Test marks should be scaled down to 20marks (40% of the maximum Marks)

Final CIE for Laboratory based Ability Enhancement Course

| SL. No. | Description | % of Marks | In Marks |
|--------------|---------------------------------------|--------------------|-----------|
| 1 | Scaled Down marks of record/journal-A | 60% of the maximum | 30 |
| 2 | Scaled Down marks of test-B | 40% of the maximum | 20 |
| Total | | 100% | 50 |

FinalCIEMarks=(A) + (B) SEE

for practical Course:

| SL. No. | Description | % of Marks | Marks |
|--------------|-----------------------|-------------|------------|
| 1 | Write-up, Procedure | 20% | 20 |
| 2 | Conduction and result | 60% | 60 |
| 3 | Viva-Voce | 20% | 20 |
| Total | | 100% | 100 |

1. SEE marks for practical course shall be 50 marks
2. SEE for practical course is evaluated for 100 marks and scored marks shall be scaled down to 50 marks.
3. Change of experiment/program is allowed only once and 20% marks allotted to the procedure/write-up part to be made zero.
4. Duration of SEE shall be 3 hours.

7. Learning Objectives

| S/L | Learning Objectives | Description |
|-----|--|--|
| 1 | Master the Fundamentals of Version Control with Git | Students will be able to create, manage, and collaborate on projects using Git and GitHub, including setting up local and remote repositories, and executing advanced version control operations like branching, merging, rebasing, and resolving conflicts. |
| 2 | Implement Continuous Integration and Delivery Pipelines Using Jenkins | Students will learn to configure Jenkins for automating project builds, tests, and deployments, integrating it with GitHub repositories and other CI/CD tools, and applying various scheduling techniques to optimize workflow efficiency.. |
| 3 | Analysis of Stress and StrainAutomate Web Application Testing Using Selenium WebdriverIO | Students will be able to write and execute automated test scripts using Selenium WebdriverIO, utilize different XPath strategies to locate web elements, and integrate these scripts with reporting tools for comprehensive test automation. |
| 4 | Apply Containerization and Build Management Techniques Using Docker and Maven | Students will gain proficiency in using Docker to containerize applications, apply Maven lifecycle commands for build management, and integrate these tools with Jenkins to streamline the build, test, and deployment processes.. |
| 5 | Manage Agile Project Workflows and Retrieve Data Using JQuery | Students will learn to implement Agile methodologies, including creating and managing backlogs, sprints, and tasks in a project, and effectively use JQuery for data retrieval and manipulation within web applications.. |

| | | |
|---|--|---|
| 6 | Develop and Integrate a Comprehensive DevOps Toolchain Framework | Students will be able to design, develop, and implement a cohesive DevOps toolchain framework that integrates multiple tools such as Git, Jenkins, Docker, and Maven, Selenium, and Agile project management practices to automate and manage the software development lifecycle efficiently. |
|---|--|---|

8. Course Outcomes (COs) and Mapping with POs/ PSOs**Course Outcomes (COs)**

| COs | Description |
|--------------|---|
| M23BCS607B.1 | Apply Version Control Techniques Demonstrate the ability to create, manage, and maintain local and remote repositories using Git and GitBash |
| M23BCS607B.2 | Implement Continuous Integration and Automation Utilize Jenkins to automate the integration, testing, and deployment processes by creating and scheduling CI/CD pipelines. |
| M23BCS607B.3 | Develop Automation Scripts for Web Applications |
| M23BCS607B.4 | Integrate Development Tools with Docker and Maven |
| M23BCS607B.5 | Design Agile and DevOps Practices. |

CO-PO-PSO Mapping

10. Future with this Subject:

- † **High Demand for DevOps Professionals:** Proficiency in tools like Git, Jenkins, Docker, and Selenium, coupled with Agile and DevOps methodologies, will make graduates highly sought after in industries ranging from tech startups to large enterprises.
- † **Cloud-Native and Microservices Architectures:** Skills in containerization (e.g., Docker) and CI/CD pipelines will be critical for managing complex, distributed applications in cloud environments. Students trained in these areas will be well-prepared for roles in cloud engineering and site reliability engineering (SRE).
- † **Automation and Artificial Intelligence in DevOps:** Knowledge in automation scripting and tool integration will be a foundational skill as AI-driven tools become standard in CI/CD pipelines and infrastructure management. This subject will prepare students to innovate in these areas.

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

- † **Expansion of Agile and DevOps Beyond IT:** A deep understanding of Agile and DevOps practices will be valuable not just in tech roles but also in broader organizational contexts, allowing graduates to contribute to the digital transformation of various industries.
- † **Continuous Learning and Adaptability:** A deep understanding of Agile and DevOps practices will be valuable not just in tech roles but also in broader organizational contexts, allowing graduates to contribute to the digital transformation of various industries.

|--------------------------------|---|-------------------|
| 6th Semester | Ability Enhancement V(AE-V) Predictive Analytics using R | M23BCS607C |
|--------------------------------|---|-------------------|

1. Prerequisites

| S/L | Proficiency | Prerequisites |
|----------|-----------------------------------|---|
| 1 | Programming Fundamentals | Understand the fundamental syntax of C, including variables, control structures (if, for, while), and basic data structures (arrays, structures). How to read from and write to files, as data input and output are crucial for handling datasets. |
| 2 | Mathematics and Statistics | Understand measures of central tendency (mean, median) and dispersion (variance, standard deviation). Basic concepts of probability, probability distributions, and statistical inference. |
| 3 | Machine Learning Basics | Knowledge of evaluation metrics like accuracy, precision, recall, F1 -score, and ROC curves. |
| 4 | Data Handling | Familiarity with more advanced data structures like linked lists and trees can be beneficial. Basic skills in data preprocessing, such as normalization and handling missing values. |
| 5 | Development Environment | Skills in debugging and profiling tools to analyze the performance of your C code. Hands-on experience with implementing predictive models, even in simpler languages or environments, will help in applying similar techniques in C. |

2. Competencies

| S/L | Competency | KSA Description |
|-----|--|--|
| 1 | Introduction on Predictive analytics using R: | <p>Knowledge:</p> <ul style="list-style-type: none"> Understand what predictive analytics are, its goals, and how it is used to forecast future outcomes based on historical data. Understanding of commonly used R packages for data manipulation, visualization and machine learning <p>Skills:</p> <ul style="list-style-type: none"> Techniques for reading data from various sources (CSV, Excel, databases) and writing data to files. Ability to write and debug R code effectively. Familiarity with RStudio for coding and project management. <p>Attitudes:</p> <ul style="list-style-type: none"> Ability to write and debug R code effectively. Familiarity with RStudio for coding and project management. |
| 2 | Basic statistics: | <p>Knowledge:</p> <ul style="list-style-type: none"> Understanding measures such as mean, median, mode, variance, and standard deviation. Knowledge of R's syntax, including operators, functions, and control structures. Familiarity with core R packages for statistics. <p>Skills:</p> <ul style="list-style-type: none"> Ability to compute and interpret mean, median, variance, and standard deviation using R. Creating visual representations of data using ggplot2 to display distributions, trends, and relationships. <p>Attitudes:</p> <ul style="list-style-type: none"> Ability to approach problems systematically and apply appropriate statistical methods. Ability to explain statistical results and insights clearly to both technical and non-technical audiences. |
| 3 | Data manipulation: | <p>Knowledge:</p> <ul style="list-style-type: none"> Knowledge of techniques to handle missing values, outliers, and erroneous data. Concepts related to reshaping and summarizing data, including pivoting, merging, and aggregating. <p>Skills:</p> |
| | | <ul style="list-style-type: none"> To handle a wide range of data manipulation tasks in R, leading to more effective and efficient data analysis. <p>Attitudes:</p> <ul style="list-style-type: none"> Explore different data manipulation techniques and R packages to find the most effective methods. Ability to approach data manipulation challenges systematically and finds efficient solutions. |
| 4 | Predictive Modelling technique: | <p>Knowledge:</p> <ul style="list-style-type: none"> Understanding the process of building models to make predictions and the importance of data quality and feature selection. Knowledge of various predictive modeling techniques, including regression, classification, and clustering. <p>Skills:</p> <ul style="list-style-type: none"> Ability to preprocess data, handles missing values, and performs feature engineering. Skills in selecting and engineering features that contributes to model accuracy and performance. <p>Attitudes:</p> |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|---|--------------------|---|
| | | <ul style="list-style-type: none"> Ability to approach modeling challenges methodically and applies appropriate techniques to address specific problems. |
| 5 | Regression: | <p>Knowledge:</p> <ul style="list-style-type: none"> Understanding the basic principles of regression analysis, including the purpose of modeling and the interpretation of regression coefficients. Knowledge of how to specify, fit, and validates regression models. Ability to handle missing values, outliers, and data inconsistencies before fitting a regression model. Ability to interpret and explain the coefficients of the regression model in the context of the problem. <p>Skills:</p> <ul style="list-style-type: none"> Ability to approach regression problems methodically and apply appropriate techniques to derive meaningful insights. <p>Attitudes:</p> <ul style="list-style-type: none"> Explore different regression techniques and stay updated with advancements in modeling methods. Ability to approach regression problems methodically and apply appropriate techniques to derive meaningful insights. |

3. Syllabus

| PREDICTIVE ANALYTICS USING R SEMESTER – VI | | | |
|---|------------|-------------|-----|
| Course Code | M23BCS607C | CIE Marks | 50 |
| Number of Lecture Hours/Week(L: T: P: S) | (0:0:2:0) | SEE Marks | 50 |
| Total Number of Lecture Hours | 24 Hours | Total Marks | 100 |
| Credits | 01 | Exam Hours | 02 |
| Course Objectives: <ol style="list-style-type: none"> To learn about R and how R is used for Predictive modeling. To design statistical experiments and analyze the results using modern methods. To learn Data manipulation methods and predictive Modeling techniques in R. To develop constructive approach to solve business queries with R. | | | |
| Program -1 | | | |
| Download and install R-Programming environment and install basic packages using install.packages() command in R. | | | |
| Program -2 | | | |
| Write a program to import the CSV file and reading the CSV file and extracting some specific information from the data frame. | | | |
| Program -3 | | | |
| Create a CSV file having Speed and Distance attributes with 50 records. Write R program to draw i) Box plots ii) Histogram | | | |

| |
|---|
| iii) Line Graph iv) Multiple line graphs v) Scatter plot to demonstrate the relation between the cars speed and the distance. |
| Program -4 |
| Write a program to load a dataset into the appropriate data structure and Use built-in functions to compute mean, median, and standard deviation on specific column. |
| Program -5 |
| Calculate skewness, kurtosis, correlation, and generate visualizations for given dataset details Data1: A sample of 100 measurements with a normal distribution (mean = 50, standard deviation = 10). Data2: A sample of 100 measurements with a normal distribution but different variance (mean = 50, standard deviation = 15). Data3: A sample of 100 measurements that is linearly related to Data1 with some added noise. |
| Program -6 |
| Write a program to evaluate its performance, and perform hypothesis testing on the model coefficients using linear regression model by using any built in dataset |
| Program -7 |
| Write an R script to perform both t-test and z-test using any built in dataset and compare the result. |
| Program -8 |
| R program to perform linear regression using a household dataset. The dataset will include features like Income, HouseholdSize, Age, and Expenditure, with the goal of predicting Expenditure based on these features. |
| Program -9 |
| Build and evaluate logistic regression model to create binary classification. |
| Program -10 |
| Write an R script to perform clustering to determine the number of cluster and visualize the data. |
| TEXTBOOKS: 1. Learning predictive Analytics with R by Eric Mayor , packt publishing 2. R for Data Science Book by Garrett Golemund and Hadley Wickham |
| Reference Books: 1. Jared P Lander, R for everyone: advanced analytics and graphics, Pearson Education, 2013 2. W. N. Venables, D. M. Smith and the R Core Team, “An Introduction to R”, 2013. |

4. Syllabus Timeline

| S/L | Syllabus Timeline | Description |
|-----|--|---|
| 1 | Week 1: Introduction | Install & Configure How to load and install packages and other basic operation |
| 2 | Week 2: Read and writing a files | Techniques for reading data from various sources (CSV, Excel, databases) and writing data to files |
| 3 | Week 3: Data visualization | Understand and communicate data insights Packages to create various types of visualizations |
| 4 | Week 4-5 Basic statistics | Understanding measures such as mean, median, mode, variance, and standard deviation and various other statistic in R |
| 5 | Week 6-7 Predictive Modelling technique | Understanding the process of building models to make predictions and the importance of data quality and feature selection |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|---|---|--|
| 6 | Week 8-10: Regression | Understanding the basic principles of regression analysis, including the purpose of modelling and the interpretation of regression coefficients. |
| 7 | Week 11-12: Project based and evaluation | Final project presentations Peer reviews and feedback Course wrap-up and discussion |

5. Teaching-Learning Process Strategies

| S/L | TLP Strategies: | Description |
|-----|-----------------------------|--|
| 1 | Assign real-world projects | Assign real-world projects where students design and develop Progressive Web Apps. |
| 2 | Interactive Workshops | Conduct workshops that involve coding sessions and live demonstrations. Focus on specific aspects like service worker setup, caching strategies, or performance optimization, and encourage students to work through exercises in real-time.. |
| 3 | Case Studies and Examples | Present case studies of successful Progressive Web Apps and analyze their features and implementations. |
| 4 | Peer Reviews and Group Work | Facilitate peer review sessions where students present their projects and provide feedback to each other. Encourage group work on lab assignments to foster collaboration and diverse problem-solving approaches. |
| 5 | Tutorials and Guided Labs | Provide step-by-step tutorials and guided lab sessions for complex topics like implementing push notifications or optimizing performance. |
| 6 | Tool-Based Learning | Integrate tools and platforms such as Google Lighthouse for performance auditing and code editors for development. |

6. Assessment Details (both CIE and SEE)**Class Work:-A****CIE Split up for Laboratory based Ability Enhancement Course**

| SL. No. | Description | % of Marks | In Marks |
|--------------|--|-------------|-----------|
| 1 | Write-up, Conduction, result and Procedure | 60% | 30 |
| 2 | Viva-Voce | 40% | 20 |
| Total | | 100% | 50 |

The Test marks should be scaled down to 30marks (60% of the maximum Marks)

Laboratory Test: -B**CIE Split up for Test in Laboratory based Ability Enhancement Course(AE)**

| SL. No. | Description | % of Marks | In Marks |
|--------------|--|-------------|-----------|
| 1 | Write-up, Conduction, result and Procedure | 60% | 30 |
| 2 | Viva-Voce | 40% | 20 |
| Total | | 100% | 50 |

The Test marks should be scaled down to 20marks (40% of the maximum Marks) **Final**

CIE for Laboratory based Ability Enhancement Course(AE)

| SL. No. | Description | % of Marks | In Marks |
|--------------|---------------------------------------|--------------------|-----------|
| 1 | Scaled Down marks of record/journal-A | 60% of the maximum | 30 |
| 2 | Scaled Down marks of test-B | 40% of the maximum | 20 |
| Total | | 100% | 50 |

Final CIE Marks=(A)+ (B) SEE

for practical Course:

| SL. No. | Description | % of Marks | Marks |
|---------|-----------------------|------------|-------|
| 1 | Write-up, Procedure | 20% | 20 |
| 2 | Conduction and result | 60% | 60 |

| 2023 Scheme – 5 th to 6 th Sem Competency Based Syllabi for B.E CSE | | | |
|---|-----------|-------------|------------|
| 3 | Viva-Voce | 20% | 20 |
| Total | | 100% | 100 |

1. SEE marks for practical course shall be 50 marks
2. SEE for practical course is evaluated for 100 marks and scored marks shall be scaled down to 50 marks.
3. Change of experiment/program is allowed only once and 20% marks allotted to the procedure/write-up part to be made zero.
4. Duration of SEE shall be 3 hours.

7. Learning Objectives

| S/L | Learning Objectives | Description |
|-----|---|--|
| 1 | Introduction on Predictive analytics using R: | Build a strong foundation in R programming, enabling you to tackle a variety of data analysis tasks and apply your skills in diverse domains. |
| 2 | Basic statistics | Enabling to analyze and interpret data effectively and make informed decisions based on statistical evidence. |
| 3 | Data manipulation | Skills to effectively handle, transform, and clean data. This is crucial for preparing data for analysis and ensuring accurate results. |
| 4 | Predictive Modelling technique | Understanding and applying methods to make predictions based on data. These objectives encompass both the theoretical aspects of predictive modelling and practical skills for implementing models using various techniques. |
| 5 | Regression | Understanding of regression techniques and their applications, enabling you to perform effective and accurate predictive modelling. |

8. Course Outcomes (COs) and Mapping with POs/ PSOs

Course Outcomes (COs)

| Cos | Description |
|---------------------|--|
| M23BCS607C.1 | Understand and apply fundamental concepts like variables, datatypes and commands |
| M23BCS607C.2 | Apply statistical and predictive analysis methods to real life scenario |
| M23BCS607C.3 | Analyze the performance of models using appropriate evaluation |
| M23BCS607C.4 | Evaluate the appropriateness and validity of models and report the results |
| M23BCS607C.5 | Design various experiment based on graph and charts for data visualization |

CO-PO-PSO Mapping

| COs/POs | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 | PSO1 | PSO2 |

| Program 1 to 10 | 10 | 20 | 20 | 10 | 40 | 100 |
| Total | 10 | 20 | 20 | 10 | 40 | 100 |

10. Future with this Subject:

1. Integration with Emerging Technologies

- Machine Learning and AI: Continued integration of R with machine learning and AI frameworks, including advanced techniques such as deep learning and reinforcement learning. R's ecosystem will increasingly incorporate libraries and tools for these advanced techniques.
- Cloud Computing: Enhanced support for cloud-based analytics, enabling scalable and efficient processing of large datasets through platforms like AWS, Google Cloud, and Microsoft Azure.

2. Advanced Data Visualization

- Interactive Visualizations: Growing use of interactive and dynamic data visualization tools such as plotly, shiny, and ggiraph to provide more engaging and user-friendly data exploration experiences.
- Augmented Analytics: Integration of augmented analytics tools that leverage AI to automate and enhance data visualization and insights.

3. Automated Machine Learning (AutoML)

- Simplified Modelling: Development of AutoML tools and packages in R to simplify the process of building, tuning, and deploying machine learning models. This will make predictive analytics more accessible to non-experts.
- Model Selection and Tuning: Enhanced AutoML capabilities to automatically select and tune the best models based on the given data and problem.

4. Enhanced Data Handling and Processing

- Big Data Integration: Improved capabilities for handling and analyzing big data through integration with big data technologies like Hadoop and Spark, using packages such as sparklyr.
- Real-Time Analytics: Increased focus on real-time data processing and streaming analytics to support time-sensitive decision-making.

5. Expansion of Predictive Analytics Applications

- Industry-Specific Solutions: Growth in specialized predictive analytics applications tailored to specific industries such as healthcare, finance, retail, and manufacturing, with R packages and frameworks designed for these domains.
- Predictive Maintenance: Enhanced tools for predictive maintenance and failure prediction in industrial settings, leveraging sensor data and IoT technologies.

6. Improved Model Interpretability

- Explainable AI: Development of better tools and methods for explaining and interpreting complex predictive models, including SHAP, LIME, and other model-agnostic techniques.
- Regulatory Compliance: Increased focus on ensuring models meet regulatory requirements for transparency and fairness.

| | | |
|--------------------------|--|------------|
| 6 th Semester | Ability Enhancement CourseV(AE-V) GOLANG PROGRAMMING | M23BCS607D |
|--------------------------|--|------------|

1. Prerequisites

| S/L | Proficiency | Prerequisites |
|-----|---------------------------------|---|
| 1 | Basic Programming Knowledge | Understanding of programming concepts: Familiarity with basic concepts like variables, loops, conditionals, functions, and data structures (e.g., arrays, slices, maps) is helpful. Experience with another programming language: Prior experience with languages like Python, Java, or C can be beneficial, as it helps you understand Go's syntax and structure more easily. |
| 2 | Development Environment | Operating System: Go is cross-platform, so you can use it on Windows, macOS, or Linux. Text Editor or IDE: You can use any text editor like VS Code, Sublime Text, or a Go-specific IDE like GoLand. VS Code with the Go extension is highly recommended for Go development. |
| 3 | Go Compiler and Tools | Git: Familiarity with Git is helpful for version control, especially when working on larger projects or contributing to open source. |
| 4 | Command Line Interface (CLI) | Basic command-line knowledge: Understanding how to navigate your file system, execute commands, and manage packages using the CLI will be useful. Go often interacts with the terminal, especially when running or building programs. |
| 5 | Internet Connection | Access to documentation and packages: Go has extensive online documentation and a package ecosystem. You'll need an internet connection to access the Go documentation and to download third-party packages. |
| 6 | Familiarity with Go Conventions | Go coding standards: Go has specific coding conventions, like using tabs for indentation and organizing code in specific directory structures. Familiarizing yourself with these early on will help you write idiomatic Go code. |

2. Competencies

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| S/L | Competency | KSA Description |
|-----|---|---|
| 1 | Concurrency and Parallelism in Go | <p>Knowledge: Understand Go's concurrency model, including goroutines, channels, and the Go scheduler. Familiarity with parallel processing and how Go manages concurrent tasks.</p> <p>Skills: Ability to design and implement concurrent applications that efficiently utilize multiple CPU cores. Proficiency in managing synchronization issues, avoiding race conditions, and ensuring thread safety.</p> <p>Abilities: Capable of analyzing and optimizing the performance of concurrent Go programs, ensuring that they are both efficient and scalable. Ability to debug complex concurrency-related issues.</p> |
| 2 | Go Language Proficiency | <p>Knowledge: Comprehensive understanding of Go's syntax, data types, control structures, and standard libraries. Familiarity with Go's memory management, garbage collection, and type system.</p> <p>Skills: Proficiency in writing clean, idiomatic Go code. Skilled in leveraging Go's built-in functions and packages to solve common programming tasks efficiently.</p> <p>Abilities: Able to apply Go's features to develop high-performance applications. Capable of mentoring others in Go's best practices and contributing to open-source Go projects.</p> |
| 3 | Backend Development with Go | <p>Knowledge: Understanding of backend architecture, RESTful API design, and database integration (both SQL and NoSQL) within the context of Go programming. Familiarity with web frameworks like Gin, Echo, or Fiber.</p> <p>Skills: Expertise in building and maintaining robust backend services and APIs using Go. Skilled in handling HTTP requests, routing, middleware, and integrating third-party services.</p> <p>Abilities: Capable of designing and implementing scalable backend systems, optimizing them for performance, and ensuring they can handle high loads. Ability to troubleshoot and resolve backend issues effectively.</p> |
| 4 | Testing and Debugging in Go | <p>Knowledge: In-depth knowledge of Go's testing framework, including testing package, benchmarking, and mock testing. Familiarity with Go's debugging tools and techniques.</p> <p>Skills: Proficient in writing unit tests, integration tests, and benchmarks to ensure code quality and performance. Skilled in debugging Go applications to identify and fix issues efficiently.</p> <p>Abilities: Able to design comprehensive test suites that cover all critical aspects of the application. Capable of using profiling tools to identify performance bottlenecks and optimize code accordingly.</p> |
| 5 | Dependency Management and Project Structuring | <p>Knowledge: Understanding of Go modules for dependency management, including versioning, package distribution, and workspace organization. Familiarity with Go's project structure and best practices.</p> <p>Skills: Ability to manage project dependencies effectively using Go modules. Skilled in organizing code into packages, managing external dependencies, and ensuring reproducible builds.</p> <p>Abilities: Capable of structuring large-scale Go projects in a way that promotes maintainability and scalability. Ability to resolve dependency conflicts and ensure smooth project collaboration.</p> |
| 6 | Performance Optimization in Go | <p>Knowledge: Deep understanding of Go's performance characteristics, including memory management, garbage collection, and CPU usage. Familiarity with tools for profiling and performance analysis.</p> <p>Skills: Expertise in identifying and optimizing performance bottlenecks in Go applications. Skilled in writing efficient code that minimizes memory usage and maximizes execution speed.</p> <p>Abilities: Able to conduct thorough performance audits and implement optimizations that improve the overall efficiency of Go applications. Ability to scale applications to meet increasing demands while maintaining performance.</p> |

3. Syllabus

| GOLANG PROGRAMMING SEMESTER – VI | | | |
|--|---|-------------|-----|
| Course Code | M23BCS607D | CIE Marks | 50 |
| Number of Lecture Hours/Week(L: T: P: S) | (0:0:2:0) | SEE Marks | 50 |
| Total Number of Lecture Hours | 24 Hours | Total Marks | 100 |
| Credits | 01 | Exam Hours | 02 |
| Course objectives: This course will enable students: 1. To learn the basics of Golang Programming . 2. To understand and develop Go applications using syntax, data structures, and standard libraries. 3. To Debug and analyze Go code for logic, performance, and concurrency issues. 4. To Design and optimize scalable backend services and APIs using Go best practices. | | | |
| Pgm. No. | List of Programs | | |
| PART-A | | | |
| 1 | Design and Implement a Go program to print the name of the months and number of days based on user input number. Apply switch statement to implement the same. | | |
| 2 | Implement a calculator program that displays a menu with options 1. Add 2. Sub 3. Mul 4. Div Read 2 numbers and perform the relevant operation. After performing the operation, the program should ask the user if he wants to continue. If the user press Yes or Y, then the program should continue displaying the menu else the program should terminate. | | |
| 3 | Accept a n array of 5 positive integers. Create a program to find the smallest positive integer in the user input array which cannot be formed from the sum of 2 numbers in the array. | | |
| 4 | Develop a Go Program to check whether the user given matrix is a sparse or not. | | |
| 5 | Design and develop a simple Go function to find the longest substring without repeating characters in a given String. | | |
| 6 | Illustrate the different types of recursion in Go with suitable programs. Direct, Indirect, Tail and Head Recursion | | |
| PART-B | | | |
| 7 | Design a structure Employee with name and salary as its filed. Create three employee instances. Print the details and computer the average salary. | | |
| 8 | Create a program to swap two numbers using pointers in Go. | | |
| 9 | Apply pointer to structure concept to print the details of 3 student records. Assume Student record to contain USN, name and marks. | | |
| 10 | Develop a program to illustrate how to create an anonymous Goroutine. | | |
| 11 | Develop a program to illustrate how to start multiple Go routines. | | |
| 12 | Solve Producer Consumer concurrency issue using Go concurrency concept. | | |
| PART-C | | | |

- Beyond Syllabus Virtual Lab Content (To be done during Lab but not to be included for CIE or SEE)
- Develop a Golang program to replace all occurrences of a word with another word in the given string. <https://www.youtube.com/watch?v=vFqjpJfCG6Q>
 - Develop a calculator program using switch cases in Golang. <https://www.youtube.com/watch?v=ca8xBxKWxsM>
 - Develop bubble sort implementation in Golang. <https://www.youtube.com/watch?v=98yDJ5vao5Q>

Suggested Learning resources Text**Books:**

1. A Donovan, Brain W.Keringhan, “The Go Programming Language”, Addison-Wesley Professional Computing Series, 2016 (Reprint)
 2. An Introduction to Programming In Go by Caleb Doxsey
- E-Reference Books:**
- 1) www.tutorialgateway.org/go-programs
 - 2) <https://gobyexample.com>

4. Syllabus Timeline

| S/L | Syllabus Timeline | Description |
|-----|-------------------|---|
| 1 | Week 1-2: | Program 1: Design and Implement a Go program to print the name of the months and number of days based on user input number. Apply switch statement to implement the same. Program 2: Implement a calculator program that displays a menu with options 1. Add 2. Sub 3. Mul 4. Div Read 2 numbers and perform the relevant operation. After performing the operation, the program should ask the user if he wants to continue. If the user press Yes or Y, then the program should continue displaying the menu else the program should terminate. |
| 2 | Week 3-4: | Program 3: Accept a n array of 5 positive integers. Create a program to find the smallest positive integer in the user input array which cannot be formed from the sum of 2 numbers in the array. Program 4: Develop a Go Program to check whether the user given matrix is a sparse or not. |
| 3 | Week 5-6: | Program 5: Design and develop a simple Go function to find the longest substring without repeating characters in a given String. Program 6: Illustrate the different types of recursion in Go with suitable programs. Direct, Indirect, Tail and Head Recursion |
| 4 | Week 7-8: | Program 7: Design a structure Employee with name and salary as its field. Create three employee instances. Print the details and compute the average salary. Program 8: Create a program to swap two numbers using pointers in Go. |
| 5 | Week 9-10: | Program 9: Apply pointer to structure concept to print the details of 3 student records. Assume Student record to contain USN, name and marks. |
| | | Program 10: Develop a program to illustrate how to create an anonymous Goroutine. |
| 6 | Week 11-12: | Program 11: Develop a program to illustrate how to start multiple Go routines. Program 12: Solve Producer Consumer concurrency issue using Go concurrency concept. |

5. Teaching-Learning Process Strategies

| S/L | TLP Strategies: | Description |
|-----|-----------------|-------------|
|-----|-----------------|-------------|

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

| | | |
|---|---|---|
| 1 | Hands-on Coding Sessions | Conduct regular coding exercises and labs where students actively write and run Go programs, reinforcing concepts learned in lectures. Provide practical projects that require the application of Go's concurrency model, standard libraries, and tools. |
| 2 | Interactive Lectures and Discussions | Use interactive lectures to introduce and explain Go's core concepts, such as goroutines, channels, and Go modules. Encourage class discussions and Q&A sessions to clarify doubts and deepen understanding of complex topics. |
| 3 | Problem-Based Learning (PBL) | Present real-world scenarios and problems that require students to design and develop solutions using Go. Assign group projects that foster collaboration and peer learning, simulating professional Go development environments. |
| 4 | Code Reviews and Pair Programming | Implement code review sessions where students evaluate each other's code, learning best practices and improving their coding style. Utilize pair programming to enhance collaboration, allowing students to work together to solve coding challenges. |
| 5 | Quizzes and Assessments | Use regular quizzes and assessments to gauge understanding of key Go concepts and reinforce learning. Include both theoretical questions and practical coding tasks in assessments to ensure comprehensive evaluation. |
| 6 | Advanced Topics | State Management: Introduce advanced topics like state management and how to handle complex data flows in larger applications. |
| 7 | Continuous Feedback and Support | Offer timely feedback on assignments and projects, guiding students in improving their Go programming skills. Provide additional support through office hours, online forums, or study groups to address individual learning needs. |

6. Assessment Details (both CIE and SEE)

Class Work:-A

CIE Split up for Laboratory based Ability Enhancement Course

| SL. No. | Description | % of Marks | In Marks |
|--------------|--|-------------|-----------|
| 1 | Write-up, Conduction, result and Procedure | 60% | 30 |
| 2 | Viva-Voce | 40% | 20 |
| Total | | 100% | 50 |

The Test marks should be scaled down to 30marks (60% of the maximum Marks)

Laboratory Test: -B

CIE Split up for Test in Laboratory based Ability Enhancement Course

| SL. No. | Description | % of Marks | In Marks |
|--------------|--|-------------|-----------|
| 1 | Write-up, Conduction, result and Procedure | 60% | 30 |
| 2 | Viva-Voce | 40% | 20 |
| Total | | 100% | 50 |

The Test marks should be scaled down to 20marks (40% of the maximum Marks)

Final CIE for Laboratory based Ability Enhancement Course

| SL. No. | Description | % of Marks | In Marks |
|--------------|---------------------------------------|--------------------|-----------|
| 1 | Scaled Down marks of record/journal-A | 60% of the maximum | 30 |
| 2 | Scaled Down marks of test-B | 40% of the maximum | 20 |
| Total | | 100% | 50 |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

SEE for practical Course:

| SL. No. | Description | % of Marks | Marks |
|--------------|-----------------------|-------------|------------|
| 1 | Write-up, Procedure | 20% | 20 |
| 2 | Conduction and result | 60% | 60 |
| 3 | Viva-Voce | 20% | 20 |
| Total | | 100% | 100 |

1. SEE marks for practical course shall be 50 marks
2. SEE for practical course is evaluated for 100 marks and scored marks shall be scaled down to 50 marks.
3. Change of experiment/program is allowed only once and 20% marks allotted to the procedure/write-up part to be made zero.
4. Duration of SEE shall be 3 hours.

7. Learning Objectives

| S/L | Learning Objectives | Description |
|-----|--|---|
| 1 | Understand Go Syntax and Structure | Students will be able to identify and use Go's syntax, data types, and control structures to write basic programs |
| 2 | Implement Concurrency in Go | Students will understand Go's concurrency model and be able to create and manage goroutines and channels to develop concurrent applications. |
| 3 | Utilize Go's Standard Library | Students will learn to effectively use Go's standard library for tasks such as file handling, error management, and networking. |
| 4 | Develop and Test Go Applications | Students will be able to write, build, and run Go applications, and utilize Go's testing framework to create and run unit tests. |
| 5 | Design and Optimize Go-based Systems | Students will gain the ability to design, implement, and optimize scalable backend services and APIs using Go, focusing on performance and maintainability. |
| 6 | Apply Best Practices in Go Programming | Students will understand and apply Go programming best practices, including code organization, documentation, and code reviews. |

8. Course Outcomes (COs) and Mapping with POs/ PSOs

Course Outcomes (COs)

| Cos | Description |
|---------------------|--|
| M23BCS607D.1 | Apply the basic programming Go Lang constructs to develop standalone applications. |
| M23BCS607D.2 | Apply the concept of functions and recursive functions in GoLang programming |
| M23BCS607D.3 | Develop applications using Go Routines and channels |
| M23BCS607D.4 | Solve the real-world concurrency issues using concurrency with go concepts. |

CO-PO-PSO Mapping

| COs/POs | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 | PSO1 | PSO2 |
|---------------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|------|------|
| M23BCS607D.1 | 3 | | | | | | | | | | | | 2 | |
| M23BCS607D.2 | | 3 | | | | | | | | | | | 2 | |
| M23BCS607D.3 | | | 3 | | | | | | | | | | | 2 |
| M23BCS607D.4 | | | | 3 | 3 | | | | | | | | | 2 |

| | | | | | | | | | | | | | | |
|------------|---|---|---|---|---|--|--|--|--|--|--|--|---|---|
| M23BCS607D | 3 | 3 | 3 | 3 | 3 | | | | | | | | 2 | 2 |
|------------|---|---|---|---|---|--|--|--|--|--|--|--|---|---|

9. Assessment Plan

Continuous Internal Evaluation (CIE)

| | CO1 | CO2 | CO3 | CO4 | Total |
|-----------------|----------|-----------|-----------|-----------|-----------|
| Program 1 to 12 | 5 | 15 | 15 | 15 | 50 |
| Total | 5 | 15 | 15 | 15 | 50 |

Semester End Examination (SEE)

| | CO1 | CO2 | CO3 | CO4 | Total |
|-----------------|-----------|-----------|-----------|-----------|------------|
| Program 1 to 12 | 20 | 30 | 20 | 30 | 100 |
| Total | 20 | 30 | 20 | 30 | 100 |

10. Future with this Subject

The future with Go (Golang) programming language looks promising, driven by its strengths and growing adoption in various industries. Here are some key trends and potential future developments:

1. Increased Adoption in Cloud and Microservices:

- Go's efficiency and concurrency model make it ideal for cloud-native development and microservices. As more organizations move towards microservices architectures, Go's role in building scalable, highperformance services is likely to expand.
- Companies like Google, Uber, and Dropbox have already integrated Go into their systems, and this trend is expected to grow, especially in cloud platforms like Kubernetes, which is itself written in Go.

2. Growing Ecosystem and Tooling:

- The Go ecosystem is continuously evolving, with a growing number of libraries, frameworks, and tools. The introduction of modules for dependency management has made Go even more robust.
- Tools like GoLand (IDE), Go's built-in testing suite, and profiling tools continue to improve, making Go development more accessible and efficient.

3. Continued Focus on Simplicity and Performance:

- Go's design philosophy emphasizes simplicity and minimalism, which resonates with developers seeking to build maintainable and efficient systems. As the demand for performant and scalable software grows, Go's straightforward approach will remain attractive.
- The language's performance characteristics, particularly in networked applications and large-scale systems, will keep it relevant in performance-critical environments.

4. Expansion in DevOps and Site Reliability Engineering (SRE):

- Go's quick compilation times, static binaries, and cross-platform capabilities make it a preferred choice for developing DevOps tools and SRE applications. Its growing popularity in this area is likely to continue as infrastructure-as-code and automation become more prevalent.

5. Broader Application in Emerging Technologies:

- As technologies like blockchain, AI, and IoT continue to grow, Go's reliability and performance could see it being adopted in these fields. For example, Go is already being used in blockchain platforms like Ethereum and Hyperledger Fabric.
- The language's ease of deployment and low overhead make it suitable for resource-constrained environments like IoT devices.

6. Enhanced Support for Web Development:

- Although not traditionally seen as a web development language, Go's use in backend web services and APIs is on the rise. Frameworks like Gin and Echo are helping Go gain traction in the web development community.
- As web applications continue to evolve, Go could see increased use in performance-critical web backends and real-time services.

7. Active Community and Language Evolution:

- The Go community is active and continues to drive the language forward with regular updates and proposals for new features. The community's focus on keeping Go simple yet powerful ensures that the language will continue to evolve to meet the needs of developers.

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

- Future versions of Go are likely to introduce features that address current limitations while maintaining the language's core simplicity.

8. Learning and Career Opportunities:

- As Go's popularity increases, there will be more opportunities for learning and career advancement in this field. Developers proficient in Go are already in demand, particularly in industries focused on cloud computing, backend development, and distributed systems.
- Educational resources, both online and in academic settings, are likely to expand, further driving the language's adoption.

| 6th Semester | Non-Credit Mandatory Course(NCMC National Service Scheme(NSS) | M23BNSK608 |
|--------------------------------|--|-------------------|

| Non-Credit Mandatory Courses(NCMC) National Service Scheme(NSS) | | | |
|---|-------------------|-------------|------------|
| Course Code | M23BNSK608 | | |
| Number of Lecture Hours/Week(L:T:P:S) | (0:0:2:0) | CIE Marks | 100 |
| Total Number of Lecture Hours | - | SEE Marks | - |
| Credits | 0 | Total Marks | 100 |
| Activities Report Evaluation by College NSS Officer at the end of every semester(3 rd to 6 th semester) | | | |
| <p>Course objectives: National Service Scheme (NSS) will enable students to:</p> <ol style="list-style-type: none"> 1. Understand the community in general in which they work. 2. Identify the needs and problems of the community and involve them in problem-solving. 3. Develop among them a sense of social & civic responsibility & utilize their knowledge in finding practical solutions to individual and community problems. 4. Develop competence required for group-living and sharing of responsibilities & gain skills in mobilizing community participation to acquire leadership qualities and democratic attitudes. 5. Develop capacity to meet emergencies and natural disasters & practice national integration and social harmony in general. | | | |
| <p>General Instructions-Pedagogy: These are sample Strategies, which teachers can use to accelerate the attainment of the various course outcomes.</p> <ol style="list-style-type: none"> 1. In addition to the traditional lecture method, different types of innovative teaching methods may be adopted so that the activities will develop students' theoretical and applied social and cultural skills. 2. State the need for NSS activities and its present relevance in the society and Provide real-life examples. 3. Support and guide the students for self-planned activities. 4. You will also be responsible for assigning homework, grading assignments and quizzes, and documenting students' progress in real activities in the field. 5. Encourage the students for group work to improve their creative and analytical skills. | | | |

2023 Scheme – 5th to 6th Sem Competency Based Syllabi for B.E CSE

Contents :

1. Organic farming, Indian Agriculture (Past, Present and Future)Connectivity for marketing.
2. Waste management– Public, Private and Govt organization, 5R's.
3. Setting of the information imparting club for women leading to contribution in social and economic issues.
4. Water conservation techniques–Role of different stakeholders–Implementation.
5. Preparing an action able business proposal for enhancing the village in come and approach for implementation.
6. Helping local schools to achieve good results and enhance their enrolment in Higher/technical/vocational education.
7. Developing Sustainable Water management system for rural areas and implementation approaches.
8. Contribution to anynational level initiative of Government of India. For eg. Digital India, Skill India, Swatch Bharat, Atmanirbhar Bharath, Make in India, Mudra scheme, Skill development programs etc.
9. Spreading public awareness under rural out reach programs.(minimum 5 programs).
10. Social connect and responsibilities.
11. Plantation and adoption of plants. Know your plants.
12. Organize National integration and social harmony events/workshops/seminars.(Minimum 02 programs).
13. Govt.school Rejuvenation and helping them to achieve good infrastructure.

NOTE:

Student/s in individual or in a group should select any one activity in the beginning of each semester till end of that respective semester for successful completion as per the instructions of NSS officer with the consent of HOD of the department.

At the end of every semester, activity report should be submitted for evaluation.

Distribution of Activities – Semester wise from 3rd to 6th semester

| Sem | Topics / Activities to be Covered |
|---------------------------------------|---|
| 3rdSem for 25 Marks | <ul style="list-style-type: none"> Organic farming, Indian Agriculture (Past, Present, and Future) Connectivity for marketing. Waste management– Public, Private and Govt organization, 5R's. Setting of the information imparting club for women leading to contribution in social and economic issues. |
| 4thSem for 25 Marks | <ul style="list-style-type: none"> Water conservation techniques– Role of different stakeholders–Implementation. Preparing an actionable business proposal for enhancing the village income and approach for implementation. Helping local schools to achieve good results and enhance their enrolment in Higher/technical/ vocational education. |
| 5thSem for 25 Marks | <ul style="list-style-type: none"> Developing Sustainable Water management systems for rural areas and implementation approaches. Contribution to any national-level initiative of the Government of India. For eg. Digital India, Skill India, Swachh Bharat, Atmanirbhar Bharath, Make in India, Mudra scheme, Skill development programs etc. Spreading public awareness under rural out reach programs.(minimum 5 programs). Social connect and responsibilities. |
| 6thSem for 25 Marks | <ul style="list-style-type: none"> Plantation and adoption of plants. Know your plants. Organize National integration and social harmony events/workshops/seminars.(Minimum 02 programs). Govt.school Rejuvenation and helping them to achieve good infrastructure. |

Course outcomes (Course Skill Set):

Plan of Action ((Execution of Activities For Each Semester)

| Sl.No | Practice Session Description |
|---|--|
| 1. | Lecture session by NSS Officer |
| 2. | Students Presentation on Topics |
| 3. | Presentation-1, Selection of topic, PHASE-1 |
| 4. | Commencement of activity and its progress -PHASE-2 |
| 5. | Execution of Activity |
| 6. | Execution of Activity |
| 7. | Execution of Activity |
| 8. | Execution of Activity |
| 9. | Execution of Activity |
| 10. | Case-study-based Assessment, Individual performance |
| 11. | Sector wise study and its consolidation |
| 12. | Video-based seminar for 10-minutes by each student At the end of the semester with a Report. |
| <ul style="list-style-type: none"> In every semester from 3rd semester to 6th semester, Each student should do activities according to the scheme and syllabus. At the end of every semester student performance has to be evaluated by the NSS officer for the assigned activity progress and its completion. At last in 6th semester consolidated report of all activities from 3rd to 6th semester, compiled report should be submitted as per the instructions. | |
| Assessment Details: | |
| Weightage | CIE – 100% |
| Presentation-1 Selection of topic, PHASE-1 | 10 Marks |
| Commencement of activity and its progress - PHASE-2 | 10 Marks |
| Case Study-based Assessment Individual Performance with Report | 10 Marks |
| Sector-wise study & its consolidation | 10 Marks |
| Video based seminar for 10 minutes by each student At the end of semester with Report. Activities. | 10 Marks |
| Total marks for the course in each semester | 50 Marks |
| <ul style="list-style-type: none"> Implementation strategies of the project(NSS work). The last Report should be signed by the NSS Officer, the HOD, and the principal. At-last Report should be evaluated by the NSS officer of the institute. Finally, the consolidated marks sheet should be sent to the university and made available at the LIC visit. | |

| |
|---|
| Marks scored for 50 by the students should be Scale down to 25 marks In each semester for CIE entry in the VTU portal. |
| 25 marks CIE entry will be entered in University IA marks portal at the end of each semester 3rd to 6th sem, Report and assessment copy should be made available in the department semester wise |
| Students should present the progress of the activities as per the schedule in the prescribed practical session in the field. There should be positive progress in the vertical order for the benefit of society in general. |
| Suggested Learning Resources: Books: 1.NSS Course Manual, Published by NSS Cell, VTU Belagavi. 2. Government of Karnataka, NSS cell, activities reports and manual. 3.Government of India, NSS cell, Activities reports and manual. |

The Health Benefits of Yoga

The benefits of various yoga techniques have been supposed to improve

- body flexibility,
- performance,
- stress reduction,
- attainment of inner peace, and
- self-realization.

The system has been advocated as a complementary treatment to aid the healing of several ailments such as

- coronary heart disease,
- depression,
- anxiety disorders, • asthma, and
- extensive rehabilitation for disorders including musculoskeletal problems and traumatic brain

injury. The system has also been suggested as behavioral therapy for smoking cessation and substance abuse (including alcohol abuse).

If you practice yoga, you may receive these physical, mental, and spiritual benefits:

- **Physical**
 1. Improved body flexibility and balance
 2. Improved cardiovascular endurance (stronger heart)
 3. Improved digestion
 4. Improved abdominal strength
 5. Enhanced overall muscular strength
 6. Relaxation of muscular strains
 7. Weight control
 8. Increased energy levels
 9. Enhanced immune system
- **Mental**
