

MAHARAJA INSTITUTE OF TECHNOLOGY MYSORE Autonomous Institution Affiliated to VTU

Competency Based Syllabus (CBS)
for
Computer Science and Engineering (DATA SCIENCE)
(Under Outcome Based Education (OBE) and
Choice-Based Credit System (CBCS))

Offered from 5^{th} to 6^{th} Semesters of Study In Partial Fulfillment for the Award of Bachelor's Degree in

Computer Science and Engineering (DATA SCIENCE)
2023 Scheme

Scheme Effective from the academic year 2023-24

|--------------------------|--------------------------|-------------------------------|-----------|
| 5 th Semester | Theory of Computation | W123BC8501 | |

1. Prerequisites

| S/L | Proficiency | Prerequisites |
|--|--|---|
| 1 Mathematical Foundations | | Discrete Mathematics: Understanding topics such as sets, relations, functions, combinatorics, logic, and proof techniques (e.g., induction, contradiction) is crucial. Graph Theory: Basic knowledge of graphs, trees, and their properties. Linear Algebra: While not always essential, it can be helpful in certain areas like quantum computation. Number Theory: Basics of primes, divisibility, and modular arithmetic can be useful. |
| 2 | Formal Logic | Propositional Logic: Basic logical operations, truth tables, and logical equivalences. Predicate Logic: Understanding of quantifiers, predicates, and logical inference. |
| 3 | Data Structures: Familiarity with common data structures like arrays, lists, stacks, queues, trees, and graphs. Algorithms: Basic knowledge of algorithm design, analysis (time and space complexity), and common algorithms (e.g., sorting, searching). Programming: Proficiency in at least one programming language is helpful for implementing and understanding theoretical concepts. | |
| Automata and Regular Languages: Understanding of regular expressions automata. | | Finite Automata: Basics of deterministic and nondeterministic finite automata. Regular Languages: Understanding of regular expressions and their relation to finite automata. Context-Free Grammars: Basics of context-free grammars and pushdown automata. |
| 5 | Theoretical Understanding | Grasp abstract concepts and their implications for computation |
| 6 Problem-Solving Skills Apply theoretical concepts to solve computational problems. | | Apply theoretical concepts to solve computational problems. |
| 7 | Basic Understanding of Computability and Complexity | Turing Machines: Introduction to the concept of Turing machines and the ChurchTuring thesis. P vs NP Problem: A basic understanding of computational complexity classes like P, NP, and NP-complete problems. |

2. Competencies

| S/L | Competency | KSA Description |
|-----|------------|-----------------|
|-----|------------|-----------------|

| 1 | Formal Language Theory | Knowledge: It includes understanding fundamental concepts in formal languages, grammars, automata, and the relationships between them. It also encompasses the theoretical foundation needed to understand how formal languages are defined and processed. Skills: It involves the ability to apply theoretical knowledge to solve problems and work with formal models. This includes working with formal grammars, automata, and performing operations on languages to solve computational problems Attitude: It refers to the mindset or approach an individual adopts when engaging with formal language theory. These attitudes foster deep understanding, critical thinking, and a responsible application of theoretical knowledge. | | | |
|---|------------------------------|--|--|--|--|
| 2 | Automata Theory | Knowledge: Understand the fundamental concepts, theories, and frameworks that underlie automata and formal languages. Skills: Ability to apply the knowledge of automata theory to real-world problems, design automata, and perform formal proofs. | | | |
| | | Attitude: It refers to the mindset and approach necessary to approach problems in automata theory with rigor, creativity, and persistence. | | | |
| 3 | Computability | Knowledge: Competency in computability requires foundational knowledge in several areas of computer science and mathematics. Skills: In addition to theoretical knowledge, a competent person in computability must develop practical skills such as Problem-Solving with Formal Models, Algorithm Design and Proof, Mathematical Proof Techniques etc. Attitude: It is having the right attitudes is key for competency in computability such as critical thinking, curiosity, precision and rigor. | | | |
| 4 | Complexity Theory | Knowledge: To be competent in complexity theory, a deep understanding of foundational concepts is necessary. Skills: Being competent in complexity theory not only requires knowledge but also the ability to apply that knowledge to solve real problems. Attitude: Having the right mindset and attitudes is key to achieving competency in complexity theory. | | | |

| 5 | Parsing and Language Processing | Knowledge: Requires an understanding of both formal language theory and computational techniques used for analyzing and generating language. Skills: To be proficient in parsing and language processing, you need to be able to apply theoretical knowledge to practical problems. Attitude: The right attitudes are crucial for working with complex language processing tasks |
|---|---------------------------------------|--|
| 6 | Formal Verification | Knowledge: Using mathematical techniques we have to prove that a system satisfies certain properties, such as correctness, security, or safety, under all possible conditions. This requires a deep understanding of formal methods, logic, and verification techniques, along with the ability to apply these techniques in practice. Skills: To effectively apply formal verification techniques, we need both theoretical and practical skills. Attitude: The right mindset is essential for successfully applying formal verification, as it involves complex, sometimes difficult, problem-solving. |

3. Syllabus

| o. Syllabus | | | | | | | |
|--|------------------------------------|--------------|--|--|--|--|--|
| THEORY OF COMPUTATION SEMESTER – V | | | | | | | |
| Course Code | Course Code M23BCS501 CIE Marks 50 | | | | | | |
| Number of Lecture Hours/Week(L: T: P: S) | (3:0:0:0) | SEE Marks 50 | | | | | |
| Total Number of Lecture Hours | Total Marks 100 | | | | | | |
| Credits 03 Exam Hours 03 | | | | | | | |

Course Objectives:

- 1. Introduce core concepts in Automata and Theory of Computation
- 2. Identify different Formal language Classes and their Relationships
- 3. Design Grammars and Recognizers for different formal languages
- 4. Prove or disprove theorems in automata theory using their properties
- 5. Determine the decidability and intractability of Computational problems

Module -1

Introduction to Finite Automata, Structural Representations, Automata and Complexity. The Central Concepts of Automata Theory. Deterministic Finite Automata, Nondeterministic Finite Automata, An Application: Text Search, Finite Automata with Epsilon-Transitions. **Textbook 1:Ch 1.1,1.5,2.2,2.3,2.4,2.5**

Module -2

Regular Expressions, Finite Automata and Regular Expressions, Proving Languages not to be Regular. Closure Properties of Regular Languages, Equivalence and Minimization of Automata, Applications of Regular Expressions

Textbook 1:Ch 3.1, 3.2 (Except 3.2.1), 3.3, 4.1, 4.2, 4.4

Module -3

Context-Free Language : Context-Free Language and Derivation trees, Ambiguity in context-free grammars, simplifying of context-free grammars, Normal forms for CFGs **Textbook 2:Ch 6.1-6.4,7.1**

Module -4

Pushdown Automata (PDA): Definition of the Pushdown Automaton, The Languages of a PDA, Equivalence of PDA's and CFG's, Deterministic Pushdown Automata.

Properties of Context-Free Languages: The pumping lemma for CFGs; Closure properties of CFLs Textbook 1: Ch 6.1,6.2,6.3.1,6.4,7.2,7.3

Module -5

Turing Machine: Turing machine model, Representation, Language acceptability by TM, design of TM, Techniques for TM construction. Variants of Turing Machines (TM), The model of Linear Bounded automata **Decidability:** Definition of decidability, decidable languages, Undecidable languages, halting problem of TM, Post correspondence problem.

Textbook 2:Ch 9.1-9.8,10.1-10.7

TEXTBOOKS:

- 1. John E Hopcroft, Rajeev Motwani, Jeffrey D. Ullman," Introduction to Automata Theory, Languages and Computation", Second Edition, Pearson.
- 2. K L P Mishra, N Chandrasekaran, 3rd Edition, Theory of Computer Science, PhI, 2012.Marketing Management: A relationship approach (2019), Hollensen, S, Pearson Education.

REFERENCE BOOKS:

- 1. Elain Rich, "Automata, Computability and complexity", 1st Edition, Pearson Education, 2018.
- 2. Michael Sipser: Introduction to the Theory of Computation, 3rd edition, Cengage learning, 2013
- 3. John C Martin, Introduction to Languages and The Theory of Computation, 3rd Edition, Tata McGraw –Hill Publishing Company Limited, 2013
- 4. Basavaraj S. Anami, Karibasappa K G, Formal Languages and Automata theory, Wiley India, 2012 Faculty can utilize open source tools (like JFLAP) to make teaching and learning more interactive.

4. Syllabus Timeline

| S/L | Syllabus Timeline | Description | | |
|--|--|--|--|--|
| Week 1 Introduction to Theory of Computation | | Overview of computation models, Historical context and significance and Introduction to formal languages and automata | | |
| 2 | Week 2-4: Understand the concepts and how to design Deterministic Finite | | | |
| | Finite State Machines | Automata (DFA), Nondeterministic Finite Automata (NFA), ε-NFA and Minimizing FSMs, construct Finite State Transducers and Bidirectional Transducers. | | |
| Week 5-6: Regular Expressions | | Understand the concepts of Regular expressions and Regular grammar and their equivalence with finite automata, Properties of Regular Languages. | | |

| | Regular Grammars | |
|---|------------------------------------|---|
| 4 | Week 7-8: Context-Free Grammars | Understand the concept of Context-Free Grammars (CFG), Parse trees and derivations, Normal Form and how to eliminate ambiguity in grammar. |
| 5 | Week 9-10: Pushdown Automata | Definition of the Pushdown automata, understand the languages of a PDA; conversion of PDA's and CFG's; Prove that given PDA is Deterministic or not. Understand the Properties of Context-Free Grammar |
| 6 | Week 11: Turing machines | Introduction to Turing machines, Representation TM, designing of TM Variants of Turing machines (multi-tape, nondeterministic, etc.) |
| 7 | Week 12: Decidability | Understand the concept of decidability and undecidable, The Halting problem, Post correspondence problem. |

5. Teaching-Learning Process Strategies

| | Teaching-Learning Process Strategies | | | |
|-----|--------------------------------------|---|--|--|
| S/L | TLP Strategies: | Description | | |
| 1 | Start with Real-World Examples | Teaching Approach: Begin by introducing concepts using real-world analogies or simple, relatable examples. For instance, explain finite automata using examples like traffic light systems or vending machines. Learning Approach: Encourage students to think of everyday processes or systems that can be modeled by the concepts being studied. | | |
| 2 | Problem-Based Learning (PBL) | I complexity classifications. | | |
| 3 | Use of Visual Aids and Diagrams | Teaching Approach: Incorporate diagrams, flowcharts, and other visual aids to explain abstract concepts. For instance, use state diagrams to represent finite automata or Turing machines. Learning Approach: Create your own visual representations of concepts as a study tool. Drawing out problems and solutions can help clarify complex ideas. | | |
| 4 | Collaborative Projects | Teaching Approach: Assign group projects where students can work together to explore a theoretical concept in depth or implement a computational model. Learning Approach: Collaborate effectively with peers, dividing tasks based on individual strengths while ensuring everyone understands the overall project. | | |
| 5 | MultimodalTeaching | Teaching Approach: Incorporate a mix of lectures, visual aids, interactive simulations, group work, and hands-on projects to cater to different learning styles. Learning Approach: Identify your preferred learning style and seek out resources or study methods that align with it, whether it's visual, auditory, reading/writing, or kinesthetic. | | |

6. Assessment Details (both CIE and SEE) Assessment Details (both CIE and SEE)

The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 40% of the maximum marks (20 marks out of 50). A student shall be deemed to have satisfied the academic requirements and earned the credits allotted to each subject/ course if the

student secures not less than 35% (18 Marks out of 50) in the semester-end examination (SEE), and a minimum of 40% (40 marks out of 100) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together

Continuous Internal Evaluation:

| Components | | Number | Weightage | Max. Marks | Min. Marks |
|------------|-------------------------------|--------|-----------|------------|------------|
| (i) | Internal Assessment-Tests (A) | 2 | 50% | 25 | 10 |
| (ii) | Assignments/Quiz/Activity (B) | 2 | 50% | 25 | 10 |
| | Total Marks | | | | 20 |

Final CIE Marks = (A) + (B) Average

internal assessment shall be the average of the 2 test marks conducted.

Semester End Examination:

Theory SEE will be conducted as per the scheduled timetable, with common question papers for the subject (duration 03 hours)

- 1. Question paper pattern will be ten questions. Each question is set for 20marks. The medium of the question paper shall be English unless otherwise it is mentioned.
- 2. There shall be 2 questions from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have mix of topics under that module if necessary.
- 3. The students have to answer 5 full questions selecting one full question from each module.
- 4. Marks scored will be proportionally scaled down to 50 marks Semester End Examination:
- 1. Question paper pattern will be ten questions. Each question is set for 20 marks. The medium of the question paper shall be English unless otherwise it is mentioned.
- 2. There shall be 2 question from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have mix of topics under that module if necessary.
- 3. The students have to answer 5 full questions selecting one full question from each module.

4. Marks scored will be proportionally scaled down to 50 marks. 7. Learning Objectives

| S/L | Learning Objectives | Description | |
|-----|---|--|--|
| 1 | Understanding Formal Languages | Explain the concept of formal languages and distinguish between different classes of languages, such as regular, context-free, and contextsensitive languages. | |
| 2 | Mastering Automata Theory | Design and analyze deterministic and nondeterministic finite automata (DFA and NFA) for recognizing regular languages. Understand and apply the concepts of context-free grammars (CFG) and pushdown automata (PDA) to recognize context-free languages. | |
| 3 | Exploring Computability Theory | Understand the concept of Turing machines and their role in defining computation. Analyze the concepts of decidability and undecidability, including understanding the Halting problem and its implications. | |
| 4 | Grasping Computational Complexity | Understand and differentiate between complexity classes such as P, NP, NP-complete, and NP-hard. | |
| 5 | Applying Theoretical Concepts to Problem-Solving | Use formal methods to prove language properties, such as closure properties and the pumping lemma for regular and context-free languages and also develop problem-solving skills by applying theoretical concepts to real-world scenarios, such as designing algorithms based on automata or analyzing the computational complexity of tasks | |

8. Course Outcomes (COs) and Mapping with POs/ PSOs Course Outcomes (COs)

| Cos | Description |
|-------------|---|
| M23BCS501.1 | Apply the fundamentals of automata theory to write DFA, NFA, Epsilon-NFA and conversion between them. |
| M23BCS501.2 | Design context-free grammars (CFGs) and pushdown automata (PDAs) for formal languages |
| M23BCS501.3 | Design Turing machines to solve the computational problems and also Illustrate the concepts of decidability and undecidability. |
| M23BCS501.4 | Prove the properties of regular languages using regular expressions |

CO-PO-PSO Mapping

| COs/POs | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 | PSO1 | PSO2 |

Conditions for SEE Paper Setting:

Each module of SEE question paper should be allocated with questions for 20% of the total SEE marks **10.Future with this Subject**

1. Advancements in Artificial Intelligence and Machine Learning

- Natural Language Processing (NLP): Automata theory is crucial in the development of NLP algorithms. Understanding regular expressions and finite automata helps in text parsing and tokenization, which are fundamental in building efficient NLP models.
- Pattern Recognition: Automata and formal languages are used in recognizing patterns in data, which is vital in developing AI systems that can learn and adapt.

2. Quantum Computing

• New Computational Models: As quantum computing advances, new models of computation are emerging. Automata theory provides the foundational knowledge necessary to understand and develop quantum automata, which could revolutionize how we process information. 3. Cybersecurity

- Formal Verification: Automata theory plays a significant role in formal methods, which are used to verify the correctness of security protocols and systems. As cybersecurity threats grow, the need for rigorous verification methods will increase.
- Intrusion Detection Systems: Automata-based models are used in developing algorithms for detecting and responding to security breaches, helping to enhance the security of systems.

4. Compiler Design and Programming Languages

- Compiler Optimization: Automata theory is integral to the design and optimization of compilers, which translate high-level programming languages into machine code. Future advances in programming languages will continue to rely on automata theory to improve compiler efficiency.
- Language Development: As new programming languages are developed, understanding automata and formal grammars will be key in designing languages that are both powerful and efficient.

| 5 th Semester | Integrated Professional Core Course(IPC) Computer Networks and Security | M23BCS502 |
|--------------------------|--|-----------|
|--------------------------|--|-----------|

1. Prerequisites

| S/L | Proficiency | Prerequisites |
|-----|--|---|
| 1 | Basic Computer Science Knowledge | Basic Computer Science Knowledge: Programming Skills: Familiarity with programming languages such as Python, C, or Java is essential for scripting and automation tasks. Operating Systems: Understanding of operating system concepts, including process management, memory management, and file systems. Data Structures and Algorithms: Knowledge of basic data structures (e.g., arrays, lists, trees) and algorithms (e.g., sorting, searching) is important for problemsolving and optimization. |
| 2 | Networking Fundamentals | OSI and TCP/IP Models: Understanding the OSI model and the TCP/IP stack, including the functions of different layers (physical, data link, network, transport, and application). IP Addressing and Sub-netting: Knowledge of IP address formats (IPv4 and IPv6), subnet masks, and how to perform sub-netting and address allocation. Network Protocols: Familiarity with key protocols such as HTTP, FTP, TCP, UDP, DNS, and DHCP. Routing and Switching: Understanding of how routers and switches operate, including basic routing algorithms and protocols like RIP, OSPF, and BGP. |
| 3 | Network Devices and Technologies | Network Devices: Knowledge of different network devices such as routers, switches, firewalls, and access points. Wireless Technologies: Understanding of wireless networking principles, including Wi-Fi standards and security measures. |
| 4 | Cyber-security Basics | Security Principles: Awareness of core security principles, including confidentiality, integrity, and availability. Common Threats and Attacks: Knowledge of common types of cyber -attacks, such as phishing, malware, ransom-ware, and denial-of-service (DoS) attacks. Cryptography: Basic understanding of cryptographic concepts like encryption, decryption, hashing, and digital signatures. |

| 5 | Network Security Fundamentals | Firewalls and Intrusion Detection Systems (IDS): Familiarity with how firewalls and IDS/IPS (Intrusion Prevention Systems) function and are configured. VPNs and Encryption: Understanding of Virtual Private Networks (VPNs) and encryption protocols used to secure network communications. Access Control: Knowledge of access control methods, including authentication, authorization, and accounting (AAA). |
|---|-------------------------------------|---|
| 6 | Hands-On Experience | Lab Practice: Practical experience with network configuration, management, and troubleshooting using tools like Cisco Packet Tracer or GNS3. Security Tools: Familiarity with security tools and techniques, such as network scanners (N-map), penetration testing tools (Metasploit), and security information and event management (SIEM) systems. |

2. Competencies

| S/L | Competency | KSA Description |
|-----|-----------------------|---|
| 1 | Application protocols | Knowledge: Understand the basic functions of application protocols Skills: know the service provided by the DNS,HTTP,FTP Attitudes: Appreciation for the versatility of application protocols and distributed services. |
| 2 | Transportlayer | Knowledge: Data volume, destination, and rate are all controlled by transport-layer protocols including TCP, UDP, DCCP, and SCTP. Skills: the transport layer receives the packets, sorts them, and looks for faults. Subsequently, Enable efficient network transmission, Attitudes: provide the communication services directly to the application processes running on different hosts |
| 3 | Network layers | Knowledge: The main job of this layer is to maintain the quality of the data and |

| _ | | | |
|---|---|-------------------------------------|---|
| | | | pass and transmit it from its source to its destination. There are several important protocols that work in this layer. Skills: Selects the best path to transfer the data from source to its destination. Attitudes: The network layer performs packetization on the data. This makes it easier to transmit the data packets in the network. |
| | 4 | Security services and attacks | Knowledge: Mechanisms used to provide confidentiality, identity authentication, integrity authentication, source authentication, and/or support the non-repudiation of information. Skills: A mechanism that is designed to detect, prevent, or recover from a security attack. Security Service: A service that enhances the security of data processing systems and information transfers Attitudes: The versatility of security guards across various sectors—from retail to construction, events, and VIP protection, offering specialized services that go beyond general surveillance. |
| | 5 | Cryptography | Knowledge: There are two main types of cryptography used for digital data and secure messages today: symmetric cryptography and asymmetric cryptography. Hash functions, a third type, doesn't involve use of a key Skills: Basically to protect their privacy and keep their conversations and data confidential. Cryptography ensures confidentiality by encrypting sent messages using an algorithm with a key only known to the sender and recipient. Attitudes: By employing cryptographic techniques, data security applications help to protect various everyday transactions, ranging from file sharing within business networks to online apps used for banking or shopping. |

| 6 | Cloud computing and its security | Knowledge: Associated with cloud computing and determine the best security measures for protecting data with cloud security models. Skills: Identify sensitive or regulated data. Understand how sensitive data is being accessed and shared. Discover shadow IT (unknown cloud use). Attitudes: Cloud computing gives your business more flexibility. You can quickly scale resources and storage up to meet business demands without having to invest in physical infrastructure. |
|---|--|--|
| 7 | Transport level security | Knowledge: Internet Engineering Task Force (IETF) standard protocol that provides authentication, privacy and data integrity between two communicating computer applications. Skills: Transport Security Layer (TLS) is the successor of the Secure Socket Layer (SSL); both are security protocols and are sometimes used interchangeably. Attitudes: TLS is usually implemented on top of TCP (Transmission Control Protocol) which further encrypts Application Layer protocols such as FTP, SMTP, and HTTP. However, it can be implemented on DCCP, UDP, and SCTP |
| 8 | Web security | Knowledge: Provides protection for web applications against attacks, including cross-site scripting, file inclusion, cross-site forgery, Structured Query Language (SQL) injection, and other threats. Skills: A web application firewall (WAF) protects web applications by monitoring and filtering internet traffic that flows between an application and the internet. In this way, a WAF works as a secure web gateway (SWG). Attitudes: Web scanning involves using an application to crawl a website in search for vulnerabilities that can leave it open to a bot, spyware, rootkit, Trojan horse, or distributed denial-of-service (DDoS) attack, It then systematically checks the entire site for potential weaknesses. |
| 9 | IP security | Knowledge: unique identifying number assigned to every device connected to the internet. Skills: To protect network data by setting up circuits using IPsec tunnelling in which all data being sent between the two endpoints is encrypted, as with a Virtual Private Network (VPN) connection. Attitudes: IP Security is a versatile and widely adopted security protocol used in various network scenarios, including site-to-site VPNs, remote access VPNs, and secure communication between network devices. |

3. Syllabus

| Computer Networks and Security SEMESTER - V | | | | | | |
|---|--|-------------|-----|--|--|--|
| Course Code M23BCS502 CIE Marks 50 | | | | | | |
| Number of Lecture Hours/Week(L: T: P: S) | SEE Marks | 50 | | | | |
| Total Number of Lecture Hours | 40 hours Theory +20 hours Practical | Total Marks | 100 | | | |
| Credits | 04 | Exam Hours | 03 | | | |

Course Objectives:

- 1. To understand network application architectures and the many types of service protocols such as HTTP, SMTP, FTP, and DNS.
- 2. Analyze how the transport layer responds to network and application requests with various services and functions such as TCP and UDP.
- 3. To analyze the network layer and how it is related to routing and security between two data sets and its protocols, broadcast and multicast path.
- 4. Analyze security services and attacks by using data encryption and decryption techniques with the use of symmetric and asymmetric algorithms.
- 5. Apply and analyze the access control and network security like cloud security. Transport layer security, web security and IP security.

Module -1

Application Layer: Principles of Network Applications: Network Application Architectures, Processes Communicating, Transport Services Available to Applications, Transport Services Provided by the Internet, Application-Layer Protocols. The Web and HTTP: Overview of HTTP, Non-persistent and Persistent Connections, HTTP Message Format, User-Server Interaction: Cookies, Web Caching, The Conditional GET, File Transfer: FTP Commands & Replies, Electronic Mail in the Internet: SMTP, Comparison with HTTP, Mail Message Format, Mail Access Protocols, DNS; The Internet's Directory Service: Services Provided by DNS, Overview of How DNS Works, DNS Records and Messages, Peer-to-Peer Applications: P2P File Distribution, Distributed Hash Tables. Textbook 1: chapter 2.1 to 2.6

Module -2

Transport Layer: Introduction and Transport-Layer Services: Relationship Between Transport and Network Layers, Overview of the Transport Layer in the Internet, Multiplexing and De-multiplexing: Connectionless Transport: UDP,UDP Segment Structure, UDP Checksum, Principles of Reliable Data Transfer: Building a Reliable Data Transfer Protocol, Pipelined Reliable Data Transfer Protocols, Go-Back-N, Selective repeat, Connection-Oriented Transport TCP: The TCP Connection, TCP Segment Structure, Round-Trip Time Estimation and Timeout, Reliable Data Transfer, Flow Control, TCP Connection Management. Textbook 1: Chapter 3.1 to 3.5

Module -3

The Network layer: What's Inside a Router? Input Processing, Switching, Output Processing, Where Does Queuing Occur? Routing control plane, IPv6,A Brief foray into IP Security, Routing Algorithms: The Link-State (LS) Routing Algorithm, The Distance-Vector (DV) Routing Algorithm, Hierarchical Routing, Routing in the Internet, Intra-AS Routing in the Internet: RIP, Intra-AS Routing in the Internet: OSPF, Inter/AS Routing: BGP, Broadcast Routing Algorithms and Multicast. Textbook1: Ch 4: 4.3-4.7

Module -4

Computer Security Concepts: The OSI Security Architecture, Security Attacks, Security Services.

Symmetric Ciphers: Symmetric Cipher Model, Substitution Techniques, Transposition Techniques.

Cryptosystem::Block Cipher and the Data Encryption Standard: The Data Encryption Standard, Advanced Encryption Standard (AES): Finite Field Arithmetic, AES Structure, Public-Key Cryptography and RSA: Principles of Public-Key Cryptosystems, The RSA Algorithm, Diffie-Hellman Key Exchange
Textbook 2: Ch 1.1 to 1.4, Ch 2.1 to 2.3, Ch 3.2, Ch 5.1 to 5.2, Ch 9.1 to 9.2, 10.1

Module -5

Network access control and cloud security: IEEE 802.1X Port-Based Network Access Control, Cloud Computing, Cloud Security Risks and Countermeasures, **Transport level security:** Web Security Considerations, Secure Sockets Layer, Transport Layer Security, **IP Security:** IP Security Overview Textbook 2: Ch 16.4 to 16.5, Ch 17.1 to 17.3, Ch 20.1

PRACTICAL COMPONENT

| | Part –A |
|---|---|
| 1 | Implement Three nodes point – to – point network with duplex links between them for different topologies. 1 Set the queue size, vary the bandwidth, and find the number of packets dropped for various iterations |
| 2 | Implement simple ESS and with transmitting nodes in wire-less LAN by simulation and determine the throughput with respect to transmission of packets. |
| 3 | Using TCP/IP sockets, write a client – server program to make the client send the file name and to make the server send back the contents of the requested file if present and implement the above program using as message queues or FIFOs as IPC channels |
| 4 | Write a program on datagram socket for client/server to display the messages on Client side, typed at the server side. |
| | Part –B |
| 5 | Implement transmission of ping messages/trace route over a network topology consisting of 6 nodes and find the number of packets dropped due to congestion in the network. |
| 6 | Write a program to find the shortest path between vertices using bellman-ford algorithm. |
| 7 | Write a program for simple RSA algorithm to encrypt and decrypt the data |
| 8 | Implement and study the performance of GSM on NS2/NS3 (Using MAC layer) or equivalent environment. |

4. Syllabus Timeline

| S/L | Syllabus Timeline | Description |
|-----|--------------------------------|---|
| 1 | Week 1-3: Application layer | Competency: Understand the basic functions of application protocols Knowledge: understand the various functions of application protocols process and service. Skills: know the service provided by the DNS, HTTP, FTP |
| 2 | Week 4-6: Transport layer | Competency: Understand the concept of transport layer and its segments and services Knowledge: Data volume, destination, and rate are all controlled by transportlayer protocols including TCP, UDP, DCCP, and SCTP. Skills: the transport layer receives the packets, sorts them, and looks for faults. Subsequently, Enable efficient network transmission, |

2023Scheme - 5^{th} to 6^{th} Sem Competency Based Syllabi for B.E in CS(DS)

| 3 | Week 7-8: Network layer | Competency: Understand the concept of The network layer performs packetization on the data. This makes it easier to transmit the data packets in the network Knowledge: The main job of this layer is to maintain the quality of the data and pass and transmit it from its source to its destination. There are several important protocols that work in this layer. Skills: Selects the best path to transfer the data from source to its destination Knowledge |
|---|---|--|
| 4 | Week 9-10: Computer security concepts and Cryptosystem | Competency: Understand the concept of security attacks and services and analyse the cryptanalysis and various security attacks Knowledge: Mechanisms used to provide confidentiality, identity authentication, integrity authentication, source authentication, and/or support the non-repudiation of information. Skills: A mechanism that is designed to detect, prevent, or recover from a security attack. Security Service: A service that enhances the security of data processing systems and information transfers |
| 5 | Week 11-12: | Competency: Analyses the network access control and various security concepts |

| Network access control and security concepts | Knowledge: Unique identifying number assigned to every device connected to the internet. Skills: To protect network data by setting up circuits using IPsec tunnelling in which all data being sent between the two endpoints is encrypted, as with a Virtual Private |
|--|--|
| | Network (VPN) connection. |

5. Teaching-Learning Process Strategies

| S/L | TLP Strategies: | Description |
|-----|---|---|
| 1 | Lecture Method | Utilize various teaching methods within the lecture format to network layers and security. |
| 2 | Video/Animation | Incorporate visual aids like videos/animations to enhance understanding of network components and protocols. |
| 3 | Collaborative Learning | Encourage collaborative learning for improved competency application. |
| 4 | Higher Order Thinking (HOTS) Questions: | Pose HOTS questions to stimulate critical thinking related to each competency |
| 5 | Real-World Application | Discuss practical applications to connect theoretical concepts with real-world competencies. |
| 6 | Flipped Class Technique | Utilize a flipped class approach, providing materials before class to facilitate deeper understanding of competencies |
| 7 | Laboratory Learning | Utilize the facilities available in the laboratories to understand the process of network layers and protocols. |

6. Assessment Details (both CIE and SEE)

The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 40% of the maximum marks (20 marks out of 50). A student shall be deemed to have satisfied the academic requirements and earned the credits allotted to each subject/course if the student secures not less than 35% (18 Marks out of 50) in the semester-end examination (SEE), and a minimum of 40% (40 marks out of 100) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together

Theory Course with 4 credits: Integrated Professional Core Course (IPC)

| | Components | Number | Weightage | Max. Marks | Min. Marks |
|---------------|---------------------------------|------------|-----------|------------|------------|
| | Internal Assessment-Tests (A) | 2 | 60% | 15 | 06 |
| Theory (A) | Assignments/Quiz/Activity (B) | 2 | 40% | 40% 10 | |
| | Total Marks | | 100% | 25 | 10 |
| | Components | Number | Weightage | Max. Marks | Min. Marks |
| | Record Writing | Continuous | 60% | 15 | 06 |
| Laboratory(B) | Test at the end of the semester | 1 | 40% | 10 | 04 |
| | Total Marks | | 100% | 25 | 10 |

Final CIE Marks = (A) + (B) Semester

End Examination pattern:

2023Scheme - 5^{th} to 6^{th} Sem Competency Based Syllabi for B.E in CS(DS)

- 1. Question paper pattern will be ten questions. Each question is set for 20 marks. The medium of the question paper shall be English unless otherwise it is mentioned.
- 2. There shall be 2 question from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have mix of topics under that module if necessary.
- 3. The students have to answer 5 full questions selecting one full question from each module.
- 4. The question paper may include at least one question from the laboratory component.
- 5. Marks scored will be proportionally scaled down to 50 marks

carning Objectives

| | <u>Learning Objective</u> | ts . |
|-----|---|--|
| S/L | Learning Objectives | Description |
| 1 | Application layer | Students should understand the fundamental principles, components, and functions of network layers, such as protocol mechanisms, processes, and file transformation through client-server interaction. |
| 2 | Transport layers | Learning how processes are created, scheduled, transmitted, and all layers are interrelated to each other and learning each mechanism of transport layer. |
| 3 | Network layers | Learn about the network layer and how it relates to routing and security between two data sets, as well as its protocols, broadcast and multicast paths, including the Routing Algorithm, the Distance-Vector (DV) Routing Algorithm, and hierarchical routing. |
| 4 | Security attacks services and Cryptosystem | Understand security services and attacks that use data encryption and decryption techniques based on symmetric and asymmetric algorithms. |
| 5 | Network access control and Various security concepts | Analyse access control and network security, including cloud security. Transport layer security, online security, and IP security issues covered include the OSI Security Architecture, symmetric and asymmetric algorithms, and other network access and security concepts. |

8. Course Outcomes (COs) and Mapping with POs/ PSOs **Course Outcomes (COs)**

10. Future with this Subject:

Application layer: Application layer protocols are the messaging protocols that these IoT devices used to transport data. Without application layer protocols, Internet of Things devices would have no means by which to share data and information either from device-to-device or from device-to-server.

Transport layer: Some of the transport layer devices are, Gateways: In computer networking, a gateway is a component that is part of two networks, which use different protocols. The gateway is a protocol converter which will translate one protocol into the other. The transport layer provides a total end-to-end solution for reliable communications. TCP/IP relies on the transport layer to effectively control communications between two hosts. When an IP communication session must begin or end, the transport layer is used to build this connection **Network layer**: The scope of networking courses is very high and promising. The courses offered in the networking domain are the most in-demand and leading. Networking jobs are increasing, and so is the demand for Network Engineers. Dwell in the networking jobs in India and boost your career in the IT industry and emerging technologies shaping the future of networking:

5G Networks: 5G technology is the most delinquent generation of mobile communication networks, providing faster speeds and enhanced dependability compared to earlier generations.

Computer Security Concepts and Crypto-system: The future of cyber security is closely connected to quantum computing because quantum computers could change how we protect and use data. Right now, most of the ways we keep information safe in cyber security rely on the fact that some math problems are really hard for regular computers to solve.

Network access control and various security concepts: Future NAC solutions will focus on improving user experience by implementing seamless authentication mechanisms, frictionless onboarding processes, and userfriendly interfaces for policy management and self-service capabilities. The NAC can also provide endpoint

security protection such as antivirus software, firewall, and vulnerability assessment with security enforcement policies and system authentication methods.

Course Objectives:

The objective of learning Hadoop in a Big Data context is to provide students with a comprehensive understanding of its distributed computing framework, enabling them to efficiently store, process, and analyze vast amounts of data across clusters of computers. By mastering Hadoop's core components, such as HDFS (Hadoop Distributed File System) and Map Reduce, students will gain the skills needed to handle large-scale data processing tasks, optimize resource utilization, and develop scalable solutions. The course also aims to familiarize students with related tools in the Hadoop ecosystem, such as Hive and Pig, to enhance their ability to perform complex data queries and analytics.

Module -1

Meet Hadoop: Data ,Data Storage and Analysis , Querying All Your Data , Beyond Batch , Comparison with Other Systems : Relational Database Management Systems , Grid Computing , Volunteer Computing , A Brief History of Apache Hadoop

The Hadoop Distributed File system: The Design of HDFS, HDFS Concepts, Blocks, Name nodes and Data nodes, Block Caching, HDFS Federation, HDFS High Availability, The Command-Line Interface, Basic File system Operations, Hadoop File systems, Interfaces, The Java Interface, Reading Data from a Hadoop URL, Reading Data Using the File System API, Writing Data, Directories, Querying the File system, Deleting Data, Data Flow, Anatomy of a File Read, Anatomy of a File Write, Coherency Model, Parallel Copying with distop, Keeping an HDFS Cluster Balanced Chapter 1,3

Module -2

MapReduce: A Weather Dataset, Data Format, Analyzing the Data with Unix Tools, Analyzing the Data with Hadoop, Map and Reduce, Java MapReduce, Scaling Out, Data Flow, Combiner Functions, Running a Distributed MapReduce Job, Hadoop Streaming Chapter 2

Module -3

Pig: Installing and Running Pig, Execution Types, Running Pig Programs, Grunt, Pig Latin Editors, An Example, Generating Examples, Comparison with Databases, Pig Latin, Structure, Statements, Expressions, Types, Schemas, Functions, Macros, User-Defined Functions, A Filter UDF, An Eval UDF, A Load UDF, Data Processing Operators, Loading and Storing Data, Filtering Data, Grouping and Joining Data, Sorting Data, Combining and Splitting Data, Pig in Practice, Parallelism, Anonymous Relations, Parameter Substitution Chapter 16

Module -4

Hive: Installing Hive ,The Hive Shell, An Example ,Running Hive ,Configuring Hive ,Hive Services ,The Megastore ,Comparison with Traditional Databases ,Schema on Read Versus Schema on Write ,Updates, Transactions, and Indexes ,SQL-on-Hadoop Alternatives ,Hive QL ,Data Types ,Operators and Functions ,Tables ,Managed Tables and External Tables ,Partitions and Buckets ,Storage Formats ,Importing Data ,Altering Tables ,Dropping Tables ,Querying Data ,Sorting and Aggregating ,MapReduce Scripts ,Joins ,Subqueries ,Views ,User-Defined Functions ,Writing a UDF ,Writing a UDAF Chapter 17

Module -5

Flume: Installing Flume, Transactions and Reliability, Batching The HDFS Sink, Partitioning and Interceptors .File Formats, Fan Out, Delivery Guarantees, Replicating and Multiplexing Selectors, Distribution: Agent Tiers, Delivery Guarantees, Sink Groups, Integrating Flume with Applications, Component Catalogue

Spark Applications- Jobs, Stages, and Tasks, A Scala Standalone Application, Anatomy of a Spark Job Run-Job Submission, DAG Construction, Task Scheduling, Task Execution Chapter 14, 19 (selected Portion)

4. Syllabus Timeline

| S/L | Syllabus Timeline | Description | | | | | | |
|-----|---|---|--|--|--|--|--|--|
| 1 | Week 1-3: The Hadoop Distributed File system | Understanding the concept of Hadoop's data storage, analysis, and querying capabilities, compare it with other systems, and learn the design and operation of the Hadoop Distributed File System (HDFS), including key concepts like blocks, Name Nodes, Data Nodes, high availability, and file system operations using the Java interface, along with data flow and cluster balancing techniques. | | | | | | |
| 2 | Week 4-6: MapReduce | Analyze datasets using MapReduce, mastering Java MapReduce, data flow, distributed jobs, and Hadoop streaming. | | | | | | |
| 3 | Week 8-11: Pig | Students will learn to install and run Pig, write Pig Latin scripts, use data processing operators, and implement user-defined functions for data loading, filtering, grouping, joining, and sorting, while exploring parallelism, parameter substitution, and practical applications of Pig. | | | | | | |
| 4 | Week 7-8: Hive | Students will learn to install, configure, and run Hive, explore Hive QL, manage data with tables, partitions, and buckets, and perform data querying, sorting, aggregation, and joins. They will also compare Hive with traditional databases, understand schema on read/write, and create user-defined functions (UDFs and UDAFs). | | | | | | |
| 5 | | Students will learn to install and configure Flume, manage transactions, batching, partitioning, and file formats, and ensure reliable data delivery with Flume components. They will also explore Spark applications, understanding job stages, tasks, and the anatomy of a Spark job run, including job submission, DAG construction, and task execution. | | | | | | |

5. Teaching-Learning Process Strategies

| | Towning Bourning II | |
|-----|---------------------------|---|
| S/L | TLP Strategies: | Description |
| 1 | Lecture Method | Utilize various teaching methods within the lecture format to reinforce competencies. |
| 2 | Video/Animation | Incorporate visual aids like videos/animations to enhance understanding |
| 3 | Collaborative Learning | Encourage collaborative learning for improved competency application. |

| 4 | Real-World Application | Discuss practical applications to connect theoretical concepts with real-world competencies. |
|---|----------------------------|---|
| 5 | Flipped Class Technique | Utilize a flipped class approach, providing materials before class to facilitate deeper understanding of competencies |

6. Assessment Details (both CIE and SEE) Assessment Details (both CIE and SEE) Continuous Internal Evaluation:

The minimum CIE marks requirement is 40% of maximum marks in each component. CIE

Split up

| • | Components | Number | Weightage | Max. Marks | Min. Marks | |
|------|-------------------------------|--------|-----------|------------|------------|--|
| (i) | Internal Assessment-Tests (A) | 2 | 50% | 25 | 10 | |
| (ii) | Assignments/Quiz/Activity (B) | 2 | 50% | 25 | 10 | |
| | Total N | Marks | | 50 | 20 | |

Final CIE Marks = (A) + (B) Average

internal assessment shall be the average of the 2 test marks conducted.

Semester End Examination:

- 1. Question paper pattern will be ten questions. Each question is set for 20 marks. The medium of the question paper shall be English unless otherwise it is mentioned.
- 2. There shall be 2 question from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have mix of topics under that module if necessary.
- 3. The students have to answer 5 full questions selecting one full question from each module.
- 4. Marks scored will be proportionally scaled down to 50 marks

7. Learning Objectives

10. Future with this Subject

• Emerging Technologies:

Analyse new technologies and innovations such as AI-driven analytics, machine learning, and deep learning, and their impact on big data processing and insights.

• Real-Time Analytics:

Understand the increasing importance of real-time data analytics and stream processing, and how they enhance decision-making and operational efficiency.

Data Privacy and Security:

Examine advancements in data privacy, security measures, and ethical considerations, addressing challenges related to data protection and compliance

• Integration with IoT and Edge Computing:

Explore the integration of big data analytics with the Internet of Things (IoT) and edge computing, enhancing data collection, analysis, and action ability at the edge.

• Career Opportunities and Industry Impact:

Assess how advancements in big data analytics create new career opportunities and transform industries such as healthcare, finance, and retail, and prepare for future trends and innovations in the field.

| 5 th Semester | Professional Core Laboratory (PCL) RIG DATA ANALYTICS -LAB | M23BCDL504 |
|--------------------------|--|------------|
| 5 th Semester | BIG DATA ANALYTICS -LAB | M23BCDL5 |

1. Prerequisites

| S/L | Proficiency | Prerequisites |
|-----|--|---|
| 1 | Big Data Tools: | Hadoop: Familiarity with Hadoop's ecosystem (HDFS, YARN, Map Reduce). Apache Spark: Experience with Spark for real-time and batch processing. Hive: For querying large datasets stored in distributed storage. Pig: High-level language for processing large datasets in Hadoop. |
| 2 | Data Analysis and Visualization: | Knowledge of libraries like Pandas , NumPy , Matplotlib , or Tableau for data analysis and visualization. |
| 3 | Databases: | Basic knowledge of relational databases (e.g., MySQL, PostgreSQL) and NoSQL databases (e.g., MongoDB, Cassandra) to handle structured and unstructured data. |
| 4 | Parallel Processing: | Concepts like parallel programming and multithreading to handle large datasets. |
| 5 | Programming Skills: | Python or Java: Most big data tools and frameworks (like Hadoop, Spark) integrate well with these languages. SQL: Proficiency in querying and manipulating data using SQL is essential. |
| 6 | Data Formats: | Understanding various data formats such as CSV, JSON, Avro, Parquet, and ORC. |
| 7 | Cloud Platforms: | Experience with AWS , Google Cloud , or Microsoft Azure for working with cloudbased big data solutions. |

2. Competencies

| S/L | Competency | KSA Description |
|-----|------------|-----------------|
|-----|------------|-----------------|

| 1 | Introduction | Knowledge: Semantic Web principles and technologies Social Web concepts and platforms, Network analysis methodologies Key concepts in social network analysis. Skills: Web development basics, Data mining and analysis Use of network analysis tools Attitudes: Attention to detail in calculations and diagrams. Persistence in analyzing complex load scenarios. |
|---|--|--|
| 2 | Modeling and visualization | Knowledge: Graph theory fundamentals, Social network analysis principles, Data visualization techniques Centrality measures in network analysis Skills: Implementing graph algorithms, Creating and interpreting node-edge diagrams, Developing matrix-based network representations, Designing hybrid network visualizations Attitudes: Analytical mind set for interpreting complex network structures Curiosity about social dynamics and their digital representations |
| 3 | Extraction and mining communities in web social networks | Knowledge: Definitions of social network structures and dynamics Familiarity with community detection algorithms Knowledge of web archiving techniques and formats Understanding of multi-relational and dynamic network models Awareness of decentralized online social networks Grasp of evaluation metrics for community detection. Skills: Proficiency in programming languages (e.g., Python, R) Experience with network analysis tools (e.g., Network, Gephi) ,Ability to implement and adapt community detection algorithms Data pre-processing and cleaning Attitudes: Respect for user privacy and data protection. Ethical consideration in behaviour prediction and analysis Commitment to transparency in data collection and use Proactive approach to security and trust issues Curiosity about human behaviour and social dynamics Openness to interdisciplinary approaches |
| 4 | Predicting human behaviour and | Knowledge: Data management principles and techniques ,Statistical inference and distribution methods Reality mining concepts and applications Context-awareness in social computing Privacy concepts and regulations in online environments |

| | privacy issues | Skills: Data collection and analysis, Predictive modelling of human behavior, Designing privacy-preserving systems, Implementing trust models and algorithms Attitudes: Trust in online environment – Trust models based on subjective logic – Trust network analysis – Trust transitivity analysis – Combining trust and reputation – Trust derivation based on trust comparisons – Attack spectrum and counter measures. |
|---|----------------|---|
| 5 | Application | Knowledge: Machine learning algorithms and techniques, Linguistic analysis methods, Emotion classification models, Social media data structures and APIs, Emerging technology trends Skills: Programming (e.g., Python, R), Statistical analysis and Data visualization Model development and evaluation, API integration and Network graph analysis. Attitudes: It is use for Commitment to data security. |

|---|--------------------|-------------|-----|--|
| Course Code | M23BCDL504 | CIE Marks | 50 | |
| Number of Lecture Hours/Week(L: T: P: S) | (0:0:2) | SEE Marks | 50 | |
| Total Number of Lecture Hours | 30 hours Practical | Total Marks | 100 | |
| Credits | 01 | Exam Hours | 02 | |

Course Objectives:

- 1. Get familiar with Hadoop distributions, configuring Hadoop and performing File management tasks
- 2. Experiment MapReduce in Hadoop frameworks
- 3. Implement MapReduce programs in variety applications
- 4. Explore MapReduce support for debugging
- 5. Understand different approaches for building Hadoop MapReduce programs for real-time applications

Laboratory Experiments

- 1) Write a BD Program Map Reduce program to calculate the frequency.
- 2) Write a BD Program Map Reduce program to find the maximum temperature in each year.
- 3) Write a BD Program Map Reduce program to find the grades of student's.
- 4) Write a BD Program Map Reduce program to implement Matrix Multiplication.
- 5) Write a BD Program Map Reduce to find the maximum electrical consumption in Date: each year
- 6) Write a BD Program Develop a Map Reduce to analyze weather data set and print whether the day is shinny or cool day.
- 7) write a BD Program Develop a Map Reduce program to find the number of products sold in each country by considering sales data containing fields like
- 8) Write a BD Program Develop a Map Reduce program to find the tags associated with each movie by analyzing movie lens data.
- 9) Write a BD Program Develop a program to calculate the maximum recorded temperature by year wise for the
- 10) Write a program to analyses weather dataset in Pig Latin
- 11) Write queries to sort and aggregate the data in a table using Hive QL.
- 12) Develop a Java application to find the maximum temperature using Spark.

4. Syllabus Timeline

| S/L | Syllabus Timeline | Description |
|-----|-------------------|------------------------|
| 1 | Week 1: | Program -1, Program -2 |
| 2 | Week 2: | Program -3, Program -4 |
| 3 | Week 3: | Program -5, Program -6 |
| 4 | Week 4: | Program -7 |
| 5 | Week 5: | Program -8 |
| 6 | Week 6: | Program -9 |
| 7 | Week 7: | Program -10 |
| 8 | Week 8: | Program -11 |
| 9 | Week 9: | Program -12 |

5. Teaching-Learning Process Strategies

| S/L | TLP Strategies: | Description |
|-----|----------------------------|---|
| 1 | Lecture Method | Utilize various teaching methods within the lecture format to reinforce competencies. |
| 2 | Video/Animation | Incorporate visual aids like videos/animations to enhance understanding of Verilog concepts. |
| 3 | Collaborative Learning | Encourage collaborative learning for improved competency application. |
| 4 | Real-World Application | Discuss practical applications to connect theoretical concepts with real-world competencies. |
| 5 | Flipped Class Technique | Utilize a flipped class approach, providing materials before class to facilitate deeper understanding of competencies |

| 6 | Laboratory Learning | Knowledge about tools related to social networks and implementation of social network visualizations using tools such as Gephi, Cytoscape. |
|---|---------------------|--|
|---|---------------------|--|

6. Assessment Details (both CIE and SEE)

Marks distribution for Program based Practical Course for CIE

| Sl. No. | Description | % of Marks | In Marks |
|---------|--|--------------------|----------|
| 1 | Observation, write-up, algorithm/program/execution | 80% of the maximum | 80 |
| 2 | Viva-Voce | 20% of the maximum | 20 |
| Total | | 100% | 100 |

Marks scored by the student for 100 are scaled down to 50 marks.

SEE for practical Course (Irrespective of Experiment or program based):

Marks distribution for Experiment based Practical Course for Final CIE

| SL. No. | Description | % of Marks | Marks |
|---------|-----------------------|------------|-------|
| 1 | Write-up, Procedure | 20% | 20 |
| 2 | Conduction and result | 60% | 60 |
| 3 | Viva-Voce | 20% | 20 |
| Total | | 100% | 100 |

- 1. SEE marks for practical course shall be 50 marks
- 2. See for practical course is evaluated for 100 marks and scored marks shall be scaled down to 50 marks.
- 3. Change of experiment/program is allowed only once and 20% marks allotted to the procedure/write-up part to be made zero.
- 4. Duration of SEE shall be 3 hours.

The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%.

7. Learning Objectives

| S/L | Learning Objectives | Description |
|-----|---|--|
| 1 | Understanding Big Data Concepts | Understand the fundamental concepts of Big Data, including the definition, characteristics (Volume, Variety, Velocity, Veracity), and importance. Identify key challenges and opportunities associated with handling large-scale data. |
| 2 | Exploring Big Data Tools and Technologies | Gain practical experience with popular Big Data tools and platforms such as Hadoop, Spark, HDFS, and Map Reduce. Learn to use tools for distributed storage and processing of large datasets. |
| 3 | Distributed Computing with Hadoop and Spark | Understand the architecture of Hadoop, HDFS, and YARN. Learn how to write Map Reduce jobs and execute them in a distributed environment. Gain hands-on experience in using Apache Spark for distributed computing and real-time data processing. |
| 4 | Working with NoSQL Databases | Understand the role of NoSQL databases in Big Data environments. |

| | | Gain hands-on experience with NoSQL databases such as HBase, Cassandra, or MongoDB for managing unstructured and semi-structured data. |
|---|------------------------------|---|
| 5 | Data Security and Privacy | Understand the importance of data security and privacy in Big Data environments. Learn techniques for securing data storage and processing, including encryption, access control, and compliance with data privacy regulations. |
| 6 | Project Implementation | Apply the knowledge gained in the course to design, implement, and deploy a Big Data project. Work with real-world datasets to build scalable and efficient data processing pipelines. |

8. Course Outcomes (COs) and Mapping with POs/ PSOs

Course Outcomes (COs)

| Cos | Description |
|--------------|--|
| M23BCDL504.1 | Configure Hadoop and perform File Management Tasks |
| M23BCDL504.2 | Apply MapReduce programs to real time issues like word count, weather dataset and sales of a company |
| M23BCDL504.3 | Critically analyse huge data set using Hadoop distributed file systems and MapReduce |
| M23BCDL504.4 | Evaluate different data processing tools like Pig, Hive and Spark |
| M23BCDL504.5 | Evaluate the result and document the complete experimental process |

CO-PO-PSO Mapping

| COs/POs | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 | PSO1 | PSO2 |

| M23BCDL504.1 | 3 | - | - | - | 3 | - | - | - | - | - | - | - | 3 | - |
| M23BCDL504.2 | 3 | - | - | - | 3 | - | - | - | - | - | - | - | 3 | - |
| M23BCDL504.3 | - | 3 | 3 | - | 3 | - | - | 1 | 1 | - | - | - | 1 | 3 |
| M23BCDL504.4 | 1 | 3 | 3 | - | 3 | - | - | 1 | 1 | - | - | - | 1 | 3 |
| M23BCDL504.5 | ı | 3 | 3 | 3 | 3 | - | - | 1 | 1 | - | - | - | - | 3 |
| M23BCDL504 | 3 | 3 | 3 | 3 | 3 | - | - | - | - | - | - | - | 3 | 3 |

9. Assessment Plan

Continuous Internal Evaluation (CIE)

| | CO1 | CO2 | CO3 | CO4 | CO5 | Total |
|-----------------|-----|-----|-----|-----|-----|-------|
| Program 1 to 12 | 5 | 10 | 10 | 5 | 20 | 50 |
| Total | 5 | 10 | 10 | 5 | 20 | 50 |

Semester End Examination (SEE)

| | CO1 | CO2 | CO3 | CO4 | CO5 | Total |
|-----------------|-----|-----|-----|-----|-----|-------|
| Program 1 to 12 | 10 | 20 | 20 | 10 | 40 | 100 |
| Total | 10 | 20 | 20 | 10 | 40 | 100 |

Conditions for SEE Paper Setting:

Each module of SEE question paper should be allocated with questions for 20% of the total SEE marks

10. Future with this Subject

• AI and Machine Learning Integration

Automated Data Analytics: Big data labs will increasingly integrate AI and ML to automate data analysis processes. These technologies will provide faster insights and enable predictive analytics for more accurate forecasting.

• AI-Powered Data Processing: Machine learning algorithms will streamline data pre-processing, allowing laboratories to handle unstructured data more efficiently.

• Data Privacy and Ethical Considerations

Data Governance: With increasing regulations (GDPR, CCPA), big data labs will need to focus on creating frameworks for secure data handling, ensuring compliance with privacy laws.

Ethical AI: There will be growing emphasis on using AI and big data ethically, avoiding biases in algorithms, and ensuring fairness in automated decision-making systems.

• Data Democratization

- Self-Service Data Platforms: Big data labs will empower more non-technical users by providing userfriendly platforms for data access and analysis. These platforms will reduce the dependency on data scientists.
- **Collaboration Tools**: Enhanced collaboration platforms will allow cross-functional teams (scientists, engineers, business analysts) to work together seamlessly on data projects.

• Interdisciplinary Research

Big data labs will become hubs for interdisciplinary research, combining fields such as biology (bioinformatics), healthcare (precision medicine), finance (fintech), and more, applying data-driven techniques to solve industry-specific challenges.

• Data-as-a-Service (DaaS)

Monetizing Data: Big data laboratories will focus on turning data into a service, offering it to external organizations. DaaS models will provide analytics services, insights, and real-time data feeds.

| 5th Semester | Professional Elective -I (PE) NOSQL | M23BCD505A |
|--------------|--|------------|
|--------------|--|------------|

1. Prerequisites

| S/L | Proficiency | Prerequisites |
|-----|--|--|
| 1 | Basic Database Concepts | Relational Databases: Understanding relational database fundamentals, including SQL, normalization, and the concept of tables, schemas, and relationships. Data Modeling: Basic knowledge of entity-relationship diagrams (ERDs) and database design principles. |
| 2 | SQL Knowledge | SQL Basics: Proficiency in writing SQL queries, including SELECT, INSERT, UPDATE, DELETE, and JOIN operations. Advanced SQL: Understanding complex queries, transactions, indexing, and views. |
| 3 | Programming Fundamentals | Programming Skills: Experience with programming languages often used with NoSQL databases, such as Java, Python, or JavaScript. Familiarity with using these languages to interact with databases via APIs or libraries. |
| 4 | Understanding of Distributed Systems | Basic Concepts: Knowledge of distributed systems concepts, including data replication, consistency, partitioning, and fault tolerance. |
| 5 | Introduction to NoSQL | Types of NoSQL Databases: Familiarity with different types of NoSQL databases, including document stores, key-value stores, column-family stores, and graph databases. Use Cases: Understanding scenarios where NoSQL databases are advantageous compared to traditional SQL databases. |
| 6 | NoSQL Database Systems | Document Stores: Knowledge of systems like MongoDB and Couch DB, including how to model data, perform CRUD operations, and use query languages. Key-Value Stores: Understanding databases like Redis |

2. Competencies

| S/L | Competency | KSA Description |
|-----|--------------|--|
| 1 | Introduction | Knowledge: Understanding of relational databases and their value Concepts of persistent data and concurrency in database systems Familiarity with the standard model of relational databases Skills: Ability to design and implement relational database schemas Skill in managing persistent data and handling concurrency Proficiency in working with various NoSQL database types Ability to model data using aggregate-oriented approaches Skill in designing and implementing key-value and document stores Attitudes: Open-mindedness towards different database paradigms Critical thinking about the pros and cons of relational vs. NoSQL databases |

| 2 | Distribution Models | Knowledge: Understanding of various database distribution models Familiarity with consistency models and trade-offs Grasp of the CAP theorem and its implications Skills: Ability to design and implement distributed database systems Capacity to choose appropriate distribution models based on system requirements Attitudes: Analytical approach to system design and problem-solving Willingness to balance trade-offs between consistency, availability, and partition tolerance |
|---|------------------------|---|
| 3 | Map-Reduce, | Knowledge: Map-Reduce paradigm and its basic concepts |
| 4 | Document Databases | Partitioning and combining data in Map-Reduce Multi-stage Map-Reduce processes Skills: Implementing Map-Reduce algorithms Designing efficient data partitioning strategies Composing complex Map-Reduce calculations Attitudes: Analytical thinking for problem decomposition Openness to distributed computing paradigms Knowledge: Definition of document databases Key features of document databases Consistency models in document databases Skills: Designing and implementing document databases schemas Writing and optimizing queries for document databases Attitudes: Flexibility: Embrace the schema-less nature of document databases Scalability-oriented: Focus on designing systems that can grow easily Performance-driven: Strive to optimize query performance and data access patterns Data model adaptability: Be open to evolving data structures as application needs change Trade-off awareness: Understand the balance between consistency, availability, and partition tolerance (CAP theorem) |
| 5 | Graph Database | Knowledge: Understanding of graph database concepts and structure Familiarity with graph theory and its applications Skills: Ability to design and implement graph database schemas Proficiency in writing complex queries for graph databases Skill in optimizing graph database performance Attitudes: Curiosity about graph theory and its practical applications Openness to learning new query languages and database paradigms |

3. Syllabus

| NOSQL SEMESTER – V | | | | | | |
|--|-----------------|-------------|-----|--|--|--|
| Course Code | M23BCD505A | CIE Marks | 50 | | | |
| Number of Lecture Hours/Week(L: T: P: S) | (3:0:0:0) | SEE Marks | 50 | | | |
| Total Number of Lecture Hours | 40 hours Theory | Total Marks | 100 | | | |
| Credits | 03 | Exam Hours | 03 | | | |

Course Objectives:

- Describe the four types of NoSQL Databases, the Document-oriented, Key Value CLO
- Pairs, Column-oriented and Graph databases useful for diverse applications. CLO
- Apply performance tuning on Column-oriented NoSQL databases and Document-oriented NoSQL Databases.
- Relate the usage of processor, memory, storage, and file system commands in the architectures of columnoriented NoSQL databases, document databases, and graph databases.
- **†** Evaluate several applications for location based service and recommendation services. Devise an application using the components of NoSQL

Module -1

Why NoSQL? The Value of Relational Databases, Getting at Persistent Data, Concurrency, Integration, A (Mostly) Standard Model, Impedance Mismatch, Application and Integration Databases, Attack of the Clusters, The Emergence of NoSQL, Aggregate Data Models; Aggregates, Example of Relations and

Aggregates, Consequences of Aggregate Orientation, Key-Value and Document Data Models, ColumnFamily Stores, Summarizing Aggregate Oriented Databases. More Details on Data Models; Relationships, Graph Databases, Schema less Databases, Materialized Views, Modelling for Data Access. Chapter 1.2.3

Module -2

Distribution Models; Single Server, Sharding, Master-Slave Replication, Peer-to-Peer Replication, Combining Sharding and Replication Consistency, Update Consistency, Read Consistency, Relaxing Consistency, The CAP Theorem, Relaxing Durability, Quorums. Version Stamps, Business and System Transactions, Version Stamps on Multiple Nodes

Chapter 4,5,6

Module -3

Map-Reduce, Basic Map-Reduce, Partitioning and Combining, Composing Map-Reduce Calculations, A Two Stage Map-Reduce Example, Incremental Map-Reduce Key-Value Databases, What Is a Key-Value Store, Key-Value Store Features, Consistency, Transactions, Query Features, Structure of Data, Scaling, Suitable Use Cases, Storing Session Information, User Profiles, Preference, Shopping Cart Data, When Not to Use, Relationships among Data, Multi operation Transactions, Query by Data, Operations by Sets. Chapter 7,8

Module -4

Document Databases, What Is a Document Database?, Features, Consistency, Transactions, Availability, Query Features, Scaling, Suitable Use Cases, Event Logging, Content Management Systems, Blogging Platforms, Web Analytics or Real-Time Analytics, E- Commerce Applications, When Not to Use, Complex Transactions Spanning Different Operations, Queries against Varying Aggregate Structure Chapter 9

Module -5

Graph Databases, What Is a Graph Database?, Features, Consistency, Transactions, Availability, Query Features, Scaling, Suitable Use Cases, Connected Data, Routing, Dispatch, and Location-Based Services, Recommendation Engines, When Not to Use.

Chapter 11

4. Syllabus Timeline

| | | Symusus rimer | 1110 |
|---|-----|-------------------|-------------|
| S | 3/L | Syllabus Timeline | Description |

| 1 | Week 1-3: Introduction | Why NoSQL? The Value of Relational Databases, Getting at Persistent Data, Concurrency, Integration, A (Mostly) Standard Model, Impedance Mismatch, Application and Integration Databases, Attack of the Clusters, The Emergence of NoSQL, Aggregate Data Models; Aggregates, Example of Relations and Aggregates, Consequences of Aggregate Orientation, Key-Value and Document Data Models, Column-Family Stores, Summarizing AggregateOriented Databases. |
|---|-----------------------------------|---|
| 2 | Week 4-6: Distribution Model | Distribution Models; Single Server, Sharding, Master-Slave Replication, Peer-to-Peer Replication, Combining Sharding and Replication Consistency, Update Consistency, Read Consistency, Relaxing Consistency, The CAP Theorem, Relaxing Durability, Quorums. Version Stamps, Business and System Transactions, Version Stamps on Multiple Nodes |
| 3 | Week 8-11: Map Reduce | Map-Reduce, Basic Map-Reduce, Partitioning and Combining, Composing MapReduce Calculations, A Two Stage Map-Reduce Example, Incremental Map-Reduce Key-Value Databases, What Is a Key-Value Store, Key-Value Store Features, Consistency, Transactions, Query Features, Structure of Data, Scaling, Suitable Use Cases, Storing Session Information, User Profiles, Preference, Shopping Cart Data, When Not to Use, Relationships among Data, Multi operation Transactions, Query by Data, Operations by Set |
| 4 | Week 7-8: Document Database | Document Databases, What Is a Document Database?, Features, Consistency, Transactions, Availability, Query Features, Scaling, Suitable Use Cases, Event Logging, Content Management Systems, Blogging Platforms, Web Analytics or RealTime Analytics, E- Commerce Applications, When Not to Use, Complex Transactions Spanning Different Operations, Queries against Varying Aggregate Structure |
| 5 | Week 9-12: Graph Database | Graph Databases, What Is a Graph Database? Features, Consistency, Transactions, Availability, Query Features, Scaling, Suitable Use Cases, Connected Data, Routing, Dispatch, and Location-Based Services, Recommendation Engines, When Not to Use. |

5. Teaching-Learning Process Strategies

| S/L | TLP Strategies: | Description |
|-----|----------------------------|---|
| 1 | Lecture Method | Utilize various teaching methods within the lecture format to reinforce competencies. |
| 2 | Video/Animation | Incorporate visual aids like videos/animations to enhance understanding |
| 3 | Collaborative Learning | Encourage collaborative learning for improved competency application. |
| 4 | Real-World Application | Discuss practical applications to connect theoretical concepts with real-world competencies. |
| 5 | Flipped Class Technique | Utilize a flipped class approach, providing materials before class to facilitate deeper understanding of competencies |

6. Assessment Details (both CIE and SEE) Continuous Internal Evaluation:

The minimum CIE marks requirement is 40% of maximum marks in each component. CIE

Split up

| | Total N | 50 | 20 | | |
|------|-------------------------------|----|-----|----|----|
| (ii) | Assignments/Quiz/Activity (B) | 2 | 50% | 25 | 10 |
| (i) | Internal Assessment-Tests (A) | 2 | 50% | 25 | 10 |

Final CIE Marks = (A) + (B) Average

internal assessment shall be the average of the 2 test marks conducted.

Semester End Examination:

- 1. Question paper pattern will be ten questions. Each question is set for 20 marks. The medium of the question paper shall be English unless otherwise it is mentioned.
- 2. There shall be 2 question from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have mix of topics under that module if necessary.
- 3. The students have to answer 5 full questions selecting one full question from each module.
- 4. Marks scored will be proportionally scaled down to 50 marks

7. Learning Objectives

| | Learning Objective | 3 |
|-----|------------------------|--|
| S/L | Learning Objectives | Description |
| 1 | Introduction | Why NoSQL? The Value of Relational Databases, Getting at Persistent Data, Concurrency, Integration, A (Mostly) Standard Model, Impedance Mismatch, Application and Integration Databases |
| 2 | Distribution Model | Distribution Models; Single Server, Sharding, Master-Slave Replication, Peer-toPeer Replication, Combining Sharding and Replication. |
| 3 | Map Reduce | Map-Reduce, Basic Map-Reduce, Partitioning and Combining, Composing MapReduce Calculations, A Two Stage Map-Reduce Example, Incremental Map-Reduce |
| 4 | Document DB | Document Databases, What Is a Document Database?, Features, Consistency, Transactions, Availability, Query Features, |
| 5 | Graph DB | Graph Databases, What Is a Graph Database?, Features, Consistency, Transactions, Availability, Query Features, Scaling, Suitable Use Cases, |

8. Course Outcomes (COs) and Mapping with POs/ PSOs

Course Outcomes (COs)

| Cos | Description | | |
|--|--|--|--|
| M23BCD505A.1 Apply Architectural Knowledge of Column Oriented NoSQL Databases, D databases, and Graph databases to develop and optimize data storage and retrieval tailored to specific use cases and performance needs. | | | |
| M23BCD505A2 Analyse distribution models, MapReduce techniques, and key-value databases, for sharding, replication, consistency issues, efficient data processing, and use camanaging session and user data. | | | |
| M23BCD505A3 Analyse the features and use cases of document databases, including the transactions, and scalability | | | |
| M23BCD505A.4 | Evaluate applications for location-based services and recommendation services, focusing on the use of NoSQL components and graph database understanding. | | |

CO-PO-PSO Mapping

10. Future with this Subject:

- Emerging Trends and Technologies:
- Analyze emerging NoSQL database technologies and trends, such as advancements in multi-model databases, hybrid solutions, and integration with modern cloud-native applications.
- Scalability and Performance:
- Understand how NoSQL databases will continue to evolve to address challenges related to scalability, performance, and real-time processing, including innovations in distributed architectures and query optimization.
- Integration with Big Data and AI:
- Examine how NoSQL databases will integrate with big data platforms and artificial intelligence (AI) tools, enhancing capabilities for data analytics, machine learning, and real-time decision-making.
- Data Privacy and Security:
- Investigate future developments in data privacy and security within NoSQL databases, focusing on emerging techniques for data protection, compliance with regulations, and managing sensitive information.
- Industry Applications and Opportunities:
- Explore the expanding role of NoSQL databases in various industries, including e-commerce, social media, healthcare, and finance, and identify new career opportunities and use cases driven by advancements in NoSQL technology.

| 5 th Semester | Professional Elective (PE) | M23BCS505B |
|--------------------------|----------------------------|------------|
| | | |

1. Prerequisites

| S/L | Proficiency | Prerequisites |
|--|--|---|
| Programming Python, as it is widely used in data science for data manipulation learning. | | Knowledge of data structures (e.g., lists, dictionaries) and control structures (e.g., loops, |
| 2 | 2 Mathematics: Understanding of solving linear and quadratic equations Proficiency in differential and integral calculus, including applications. Familiarity with geometric shapes, angles, trigonometric functions, and their profice. | |

| 3 | Computer Networks and Security | Computer Networks, Network Security Understanding of network protocols, TCP/IP, DNS, and basic network configurations. Information Security, Cryptography |
|---|--------------------------------------|--|
| 4 | Operating Systems | Operating Systems, Systems Programming. Knowledge of process management, memory management, file systems, and system calls. |
| 5 | Fundamentals of Probability | Knowledge of probability theory, including conditional probability, Bayes' theorem, and probability distributions, is essential. This will help students understand the statistical underpinnings of many data science algorithms, such as Naive Bayes |

2. Competencies

| S/L | Competency | KSA Description |
|-----|------------------------------------|---|
| 1 | Introduction to cloud computing | Knowledge: Understanding the definition, scope, and significance of Cloud computing. Awareness of the Historical Developments, Building Cloud Computing Environments, Amazon Web Services (AWS), Google App Engine. Skills: Ability to articulate the role and impact of Cloud in various industries. Skill in identifying the different components of the Cloud workflow. Attitudes: Curiosity about the evolving field of Cloud and its applications. Appreciation for the interdisciplinary nature of Cloud, integrating statistics, mathematics, and domain knowledge. |
| 2 | Virtualization | Knowledge: Understanding the Cloud computing that enables the creation and management of virtual instances of physical resources, such as servers, storage, and networks. Skills: Problem-solving and project management capabilities. Attitudes: The right mindset can significantly impact how effectively one can implement, manage, and optimize virtualized environments |
| 3 | Cloud Computing Architecture | Knowledge: Understanding the Detailed overview of the knowledge components related to cloud computing architecture ub-components required for cloud computing. These components typically consist of a front-end platform (client or device), back-end platforms (servers, storage), a cloud-based delivery, and a network (usually the internet). Skills: Blend of technical skills, strategic thinking, and an understanding of the underlying principles and best practices, Cloud Service Model Expertise, Virtualization and Networking Attitudes: Play a crucial role in the effective design, implementation, and management of cloud computing architecture. |
| 4 | Cloud Platforms | Knowledge: |

| | in Industry | Understanding of Compute services, Storage services, Communication services, Additional services. Google Architecture and core concepts, Application life cycle. Skills: Edge Computing, Architectural Design, Data Management and Analytics and Troubleshooting and Support Attitudes: Attention to detail in cloud platforms |
|---|-----------------------|---|
| 5 | Cloud Applications | Knowledge: Competency-based knowledge for cloud applications typically encompasses a variety of skills across multiple domains, including infrastructure, development. Skills: Cloud applications are focused on technical proficiency, problem-solving, and the ability to leverage cloud platforms to create, deploy, and manage applications efficiently. Attitudes: Attention to detail in cloud Application. |

3. Syllabus

| CLOUD COMPUTING SEMESTER - V | | | | | | |
|--|------------|------------|----|--|--|--|
| Course Code | M23BCS505B | CIE Marks | 50 | | | |
| Number of Lecture Hours/Week(L: T: P: S) (3:0:0:0) SEE Marks | | | | | | |
| Total Number of Lecture Hours 40 Hours Total Marks 100 | | | | | | |
| Credits | 03 | Exam Hours | 03 | | | |

Course Objectives:

- 1. Compare cloud computing environment utilized for real time applications.
- 2. Identify various models of cloud computing.
- 3. Analyze how to design cloud native applications.
- 4. Examine the importance of Cloud Virtualization Technologies.

Module -1

Introduction, Cloud Computing at a Glance, Historical Developments, Building Cloud Computing Environments, Amazon Web Services (AWS), Google App Engine, Microsoft Azure, Hadoop, Force.com and Salesforce.com, Manjrasoft Aneka

Textbook 1: Chapter 1: 1.1,1.2 and 1.3

Module -2

Virtualization: Introduction, Characteristics of Virtualized, Environments Taxonomy of Virtualization Techniques, Execution Virtualization, Other Types of Virtualization, Virtualization and Cloud Computing, Pros and Cons of Virtualization, Technology Examples.

Textbook 1: Chapter 3: 3.1 to 3.6

Module -3

Cloud Computing Architecture: Introduction, Cloud Reference Model, Types of Clouds, Economics of the Cloud, Open Challenges.

Textbook 1: Chapter 4: 4.1 to 4.5

Module -4

Cloud Platforms in Industry

Amazon web services: - Compute services, Storage services, Communication services, Additional services. Google AppEngine: - Architecture and core concepts, Application life cycle, Cost model, Observations. **Textbook 1: Chapter 9: 9.1 to 9.2**

Module -5

Cloud Applications

Scientific applications: - HealthCare: ECG analysis in the cloud, Biology: gene expression data analysis for cancer diagnosis, Geoscience: satellite image processing. Business and consumer applications: CRM and ERP, Social networking, media applications.

Textbook 1: Chapter 10: 10.1 to 10.2

Textbooks

- 1. Rajkumar Buyya, Christian Vecchiola, and Thamrai Selvi Mastering Cloud Computing McGraw Hill Education.
- 2. Toby Velte, Anthony Velte, Cloud Computing: A Practical Approach, McGraw-Hill Osborne Media.

Reference Books

- 1. Borko Furht. Armando Escalante, "Handbook of Cloud Computing", Springer
- 2. George Reese, Cloud Application Architectures: Building Applications and Infrastructure in the Cloud, O'Reilly Publication.

4. Syllabus Timeline

| S/L | Syllabus Timeline | Description |
|-----|-------------------|---|
| 1 | Week 1-3: | Introduction ,Cloud Computing at a Glance, Historical Developments, Building Cloud Computing Environments, Amazon Web Services (AWS), Google AppEngine, Microsoft Azure, Hadoop, Force.com and Salesforce.com |
| 2 | Week 4-6: | Virtualization: Introduction, Characteristics of Virtualized, Environments Taxonomy of Virtualization Techniques, Execution Virtualization, Other Types of Virtualization, Virtualization and Cloud Computing, Pros and Cons of Virtualization |
| 3 | Week 8-11: | Cloud Computing Architecture: Introduction, Cloud Reference Model, Types of Clouds, Economics of the Cloud, Open Challenges |
| 4 | Week 7-8: | Cloud Platforms in Industry Amazon web services: - Compute services, Storage services, Communication services, Additional services. Google AppEngine: - Architecture and core concepts, Application life cycle, Cost model. |
| 5 | Week 9-12: | Cloud Applications Scientific applications: - HealthCare: ECG analysis in the cloud, Biology: gene expression data analysis for cancer diagnosis, Geoscience: satellite image processing. Business and consumer applications: CRM and ERP, Social networking, media applications. |

5. Teaching-Learning Process Strategies

| S/L | TLP Strategies: | Description |
|-----|---|---|
| 1 | Lectures and Interactive Discussions | Provide clear, concise explanations of key concepts, theories, and algorithms in each module. Use visual aids, such as slides and diagrams, to enhance understanding. |
| 2 | Case Studies and RealWorld Applications | Incorporate visual aids like videos/animations to enhance understanding the concepts. Incorporate case studies like the Real Direct example in Week 4 to demonstrate the application of data science concepts in real-world scenarios. This helps students see the relevance of what they are learning. |
| 3 | Collaborative Learning | Encourage collaborative learning for improved competency application. |

| 4 | Project-Based Learning | Organize students into small groups to discuss complex topics, such as the ethical implications of data science |
|---|--|---|
| 5 | Lectures and Interactive Discussions | Provide clear, concise explanations of key concepts, theories, and algorithms in each module. Use visual aids, such as slides and diagrams, to enhance understanding. |

6. Assessment Details (both CIE and SEE) Continuous Internal Evaluation:

The minimum CIE marks requirement is 40% of maximum marks in each component.

CIE Split up

| • | Components | Number | Weightage | Max. Marks | Min. Marks |
|------|-------------------------------|--------|-----------|------------|---------------|
| (i) | Internal Assessment-Tests (A) | 2 | 50% | 25 | 10 |
| (ii) | Assignments/Quiz/Activity (B) | 2 | 50% | 25 | 10 |
| _ | TotalM | Iarks | | 50 | 20 |

FinalCIE Marks =(A) + (B)

Average internal assessment shall be the average of the 2 test marks conducted.

Semester End Examination:

- 1. Question paper pattern will be ten questions. Each question is set for 20 marks. The medium of the question paper shall be English unless otherwise it is mentioned.
- 2. There shall be 2 question from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have mix of topics under that module if necessary.
- 3. The students have to answer 5 full questions selecting one full question from each module.
- 4. Marks scored will be proportionally scaled down to 50 marks

7. Learning Objectives

| S/L | Learning Objectives | Description | | | | | |
|-----|---------------------------------|--|--|--|--|--|--|
| 1 | Introduction to Cloud Computing | Students will be able to define cloud computing and explain its significance in the context Cloud Computing Environments. | | | | | |
| 2 | Virtualization | Students will be able to know the Characteristics of Virtualized, Environments Taxonomy of Virtualization Techniques, Execution Virtualization, Other Types of Virtualization. | | | | | |
| 3 | Cloud Computing Architecture: | Cloud Reference Model, Types of Clouds, Economics of the Cloud, Open Challenges. | | | | | |
| 4 | Cloud Platforms in Industry | Amazon web services: - Compute services, Storage services, Communication services, Additional services. Google AppEngine: - Architecture and core concepts, Application life cycle, Cost model | | | | | |
| 5 | Cloud Applications | Students will be able know cloud application like Health ECG analysis in the cloud, and gene expression data analysis for cancer diagnosis. | | | | | |

8. Course Outcomes (COs) and Mapping with POs/ PSOs

Course Outcomes (COs)

| Cos | Description | |
|---|--|--|
| M23BCS505B.1 | Compare cloud computing environment utilized for real time applications. | |
| M23BCS505B.2 | entify various models of cloud computing. | |
| M23BCS505B.3 Analyze how to design cloud native applications. | | |
| M23BCS505B.4 | Examine the importance of Cloud Virtualization Technologies. | |

CO-PO-PSO Mapping

| COs/POs | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 | PSO1 | PSO2 |
|--------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|------|------|

| Module 4 | | | | 20 | 20 |
| Module 5 | | | | 20 | 20 |
| Total | 20 | 20 | 20 | 20 | 100 |

10. Future with this Subject:

- **Serverless Architectures**: Simplifying application deployment and scaling by abstracting server management. This includes further advancements in Function as a Service (FaaS) and Backendas a Service (BaaS).
- **Edge Computing:** Expanding cloud capabilities to the edge of the network to reduce latency and improve performance, particularly for IoT and real-time applications.
- **Artificial Intelligence and Machine Learning:** Integrating AI and ML with cloud services to enable more intelligent automation, enhanced analytics, and better decision-making capabilities
- **Security and Privacy**: Advancing encryption, identity management, and threat detection to address growing concerns about data protection and compliance in cloud environments.
- **Quantum Computing:** Exploring how quantum computing can be integrated into cloud platforms to tackle complex problems beyond the capabilities of classical computers.
- Advanced Networking: Developing new networking technologies and protocols to support the growing demands of cloud computing, including better support for high-speed data transfer and network slice

| 5th Semester | Professional Elective-I (PE) DATA WAREHOUSING | M23BCD505C |
|--------------|---|------------|

1. Prerequisites

| S/L | Proficiency | Prerequisites |
|-----|---|--|
| 1 | Basic Understanding of Database Management Systems (DBMS) | Students should be familiar with fundamental concepts of databases, including relational databases, SQL, and basic database operations. |
| 2 | Familiarity with Data Management Concepts: | A foundational understanding of business processes, decision-making needs, and how data supports business strategies will help in grasping the importance of data warehouses. |
| 3 | Knowledge of Business Processes and Decision-Making: | A foundational understanding of business processes, decision-making needs, and how data supports business strategies will help in grasping the importance of data warehouses |
| 4 | Experience with Data Analysis Tools: | Students should have experience using data analysis tools such as spreadsheets, basic data visualization software, or simple query tools |
| 5 | Basic Programming Skills: | Knowledge of a programming language (e.g., Python, SQL) will be beneficial, especially for understanding ETL processes and data transformation techniques. |
| 6 | Understanding of Information Systems Architecture: | Familiarity with the general architecture of information systems, including hardware, software, and network components, will help in comprehending the infrastructure aspects of data warehousing. |

2. Competencies

| | 2. Competencies | |
|-----|---|--|
| S/L | Competency | KSA Description |
| 1 | Strategic Understanding of Data Warehousing | Knowledge: Understand the differences between operational and decision-support systems, and grasp the fundamental components and architecture of data warehouses and data marts. Ability to articulate the necessity of data warehousing for strategic information and describe the building blocks and architectural types of data warehouses. Skills: Analyze and evaluate the reasons for the failure of past decision-support systems and justify the adoption of data warehousing as a solution. Proficiency in evaluating existing systems, identifying gaps, and proposing data warehousing as a viable alternative. Attitudes: Develop a proactive mindset towards embracing data warehousing as a critical tool for strategic decision-making. A commitment to leveraging data warehousing to enhance organizational decisionsupport systems. |
| 2 | Effective Project Management for Data Warehousing | Knowledge: Understand the key phases in planning and managing a data warehouse project, including defining business requirements, dimensional analysis, and architectural planning. Ability to explain the steps involved in data warehouse project management and the roles of various project team members. Skills: Develop the ability to lead a data warehouse project, manage teams, and ensure that the project meets its objectives within the defined scope and timeline. Capability to create project plans, manage project phases, and guide a team through the development and implementation of a data warehouse. |

| | | Attitudes: Foster a results-driven attitude towards data warehouse project management, with an emphasis on meeting business requirements and delivering value. A focus on achieving project goals efficiently while maintaining a commitment to quality and stakeholder satisfaction. |
|---|---|--|
| 3 | Mastery of Data Warehouse Architecture and Infrastructure | Knowledge: Acquire in-depth knowledge of the various architectural components and infrastructure that support a data warehouse, including hardware, software, and metadata. Ability to describe the technical architecture and components of a data warehouse and explain the role of infrastructure in supporting data warehouse operations. Skills: Develop the technical skills to design and implement a data warehouse architecture that meets organizational needs. Proficiency in selecting appropriate infrastructure components, configuring technical architecture, and ensuring seamless data warehouse operations. Attitudes: Cultivate an appreciation for the importance of a solid infrastructure foundation in data warehousing. A commitment to investing in and maintaining the necessary infrastructure to support the long-term success of a data warehouse. |
| 4 | Advanced Dimensional Modeling and ETL Process Management | Knowledge: Understand the principles of dimensional modeling, including star and snowflake schemas, and the steps involved in the ETL (Extraction, Transformation, and Loading) process. Ability to explain the benefits of dimensional modeling and the role of ETL in data warehousing. Skills: Gain proficiency in designing dimensional models, implementing ETL processes, and using ETL tools to manage data flow within the warehouse. Ability to create effective star and snowflake schemas, execute ETL processes, and ensure data accuracy and consistency. Attitudes: Develop a detail-oriented approach to ensuring data quality through meticulous modeling and ETL processes. A focus on maintaining high standards in data processing to deliver accurate and reliable information. |

| | CS(D | |
|---|--|--|
| | , | A proactive attitude towards continuous improvement in data quality and user-focused information delivery. |
| 5 | Ensuring Data Quality and Effective Information Delivery | Knowledge: Understand the critical importance of data quality in data warehousing, including challenges, tools, and initiatives, as well as the role of OLAP and web-enabled data warehouses in information delivery. Ability to identify data quality challenges and implement tools and strategies to address them. Skills: Develop the ability to implement data quality initiatives, manage master data, and deliver information tailored to different user classes through OLAP and web-enabled systems. Capability to ensure data accuracy, manage data quality tools, and facilitate effective information delivery through various platforms. Attitudes: Foster a commitment to maintaining high data quality standards and ensuring user satisfaction through effective information delivery. |

3. Syllabus

| DATA WAREHOUSING SEMESTER – V | | | | | |
|--|-----------------|-------------|-----|--|--|
| Course Code | M23BCD505C | CIE Marks | 50 | | |
| Number of Lecture Hours/Week(L: T: P: S) | (3:0:0) | SEE Marks | 50 | | |
| Total Number of Lecture Hours | 42 hours Theory | Total Marks | 100 | | |
| Credits | 03 | Exam Hours | 03 | | |

Course Objectives:

- 1. Assess the need for data warehousing in modern business environments.
- 2. Analyze the planning a data warehouse based on business requirements 3. Identify and describe the key architectural components of a data warehouse.
- 4. Examine various data modeling approaches applicable in data warehousing.
- 5. Analyze OLAP operations and use them effectively to improve data quality

Module -1

Escalating Need for Strategic Information, Failures Of Past Decision-Support Systems, Operational Versus Decision-Support Systems, Data warehousing—The Only Viable Solution, Data Warehouse Defined. **Data Warehouse: The Building Blocks:** Defining Features, Data Warehouses and Data Marts, Architectural Types, Components: Source Data Component, Data Staging Component, Data Storage Component, Information Delivery Component, Metadata Component, Management and Control Component. **Text Book: Chapter 1, 2**

Module -2

2023Scheme - 5^{th} to 6^{th} Sem Competency Based Syllabi for B.E in CS(DS)

Planning And Project Management: Planning Your Data Warehouse, The Data Warehouse Project, The Development Phases, The Project Team, Project Management Considerations.

Defining The Business Requirements: Dimensional Analysis, Information Packages:

Requirements Not Fully Determinate, Business Dimensions, Dimension Hierarchies and Categories, Key Business Metrics Or Facts, Requirements Gathering Methods, Data Sources, Data Transformation, Data Storage, Information Delivery.

Requirements As The Driving Force For Data warehousing: Data Design, The Architectural Plan, Data Storage Specifications, Information Delivery Strategy.

Text Book: Chapter 4, 5,6

Module -3

Architectural Components: Understanding Data Warehouse Architecture, Distinguishing Characteristics, Architectural Framework, Technical Architecture, Architectural Types.

Infrastructure As The Foundation For Data warehousing: Infrastructure Supporting Architecture, Hardware And Operating Systems, Database Software, Collection Of Tools, Data Warehouse Appliances.

The Significant Role Of Metadata: Why Metadata Is Important, Metadata Types By Functional Areas, Business Metadata, Technical Metadata, How To Provide Metadata.

Text Book: Chapter 7,8,9

Module -4

Principles Of Dimensional Modelling: From Requirements To Data Design, The Star Schema, Star Schema Keys, Advantages Of The Star Schema, Star Schema: Examples, Dimensional Modelling:

Advanced Topics: The Snowflake Schema, Aggregate Fact Tables, Families Of Stars.

Data Extraction, Transformation, And Loading: ETL Overview, ETL Requirements And Steps, Data Extraction, Data Transformation, Data Loading, ETL Tool Options Reemphasizing ETL Metadata.

Text Book: Chapter 10,11,12

Module -5

OLAP In the Data Warehouse: Demand for Online Analytical Processing, Major Features And Functions,

OLAP Models, OLAP Implementation Considerations.

Data Warehousing And the Web: Web-Enabled Data Warehouse, Web-Based Information Delivery, OLAP And The Web, Building A Web-Enabled Data Warehouse.

Text Book: Chapter: 15,16

TEXTBOOKS:

- 1. Data Warehousing Fundamentals for IT Professionals, Second Edition, PAULRAJ PONNIAH, Wiley 2010.
- 2. Building the Data Warehouse (4th Edition) William H. In mon Wiley VIDEO LINKS:

4. Syllabus Timeline

| S/L | Syllabus Timeline | Description |
|-----|-------------------|-------------|
|-----|-------------------|-------------|

2023Scheme - 5^{th} to 6^{th} Sem Competency Based Syllabi for B.E in CS(DS)

| | CS(DS) | |
|---|---|---|
| 1 | Week 1-3: Escalating Need for Strategic Information & Data Warehouse | Escalating Need for Strategic Information, Failures of Past Decision-Support Systems, Operational Versus Decision-Support Systems, Data Warehousing—The Only Viable Solution, Data Warehouse Defined, Data Warehouse: The Building Blocks, Defining Features, Data Warehouses and Data Marts, Architectural Types, Components: Source Data, Data Staging, Data Storage, Information Delivery, Metadata, Management, and Control |
| 2 | Week 4-6: Planning and Project Management, Defining the Business Requirements | Planning Your Data Warehouse, The Data Warehouse Project, The Development Phases, The Project Team, Project Management Considerations Dimensional Analysis, Information Packages, Business Dimensions, Dimension Hierarchies, and Categories, Key Business Metrics or Facts, Requirements Gathering Methods Data Design, The Architectural Plan, Data Storage Specifications, Information Delivery Strategy. |
| 3 | Week 7-9: Architectural Components, Infrastructure as the Foundation for Data Warehousing | Understanding Data Warehouse Architecture, Distinguishing Characteristics, Architectural Framework, Technical Architecture, Architectural Types, Infrastructure Supporting Architecture, Hardware and Operating Systems, Database Software, Collection of Tools, Data Warehouse Appliances, Why Metadata Is Important, Metadata Types by Functional Areas, Business Metadata, Technical Metadata, How to Provide Metadata. |
| 4 | Week 10-12: Principles of Dimensional Modelling, Data Extraction, Transformation, and Loading (ETL) | From Requirements to Data Design, The Star Schema, Star Schema Keys, Advantages of the Star Schema, Star Schema: Examples, The Snowflake Schema, Aggregate Fact Tables, Families of Stars, ETL Overview, ETL Requirements and Steps, Data Extraction, Data Transformation, Data Loading, ETL Tool Options, Reemphasizing ETL Metadata. |
| 5 | Week 13-15: Data Quality, OLAP in the Data Warehouse | Why Is Data Quality Critical?, Data Quality Challenges, Data Quality Tools, Data Quality Initiative, Master Data Management (MDM), Information from the Data Warehouse, Who Will Use the Information?, Demand for Online Analytical Processing, Major Features and Functions, OLAP Models, OLAP Implementation Considerations, Web-Enabled Data Warehouse, Web-Based Information Delivery, OLAP and the Web, Building a Web-Enabled Data Warehouse. |

5. Teaching-Learning Process Strategies

| S/L | TLP Strategies: | Description |
|-----|---|--|
| 1 | Lectures with Interactive Q&A Sessions | Follow up with interactive Q&A sessions to reinforce understanding and clarify doubts. This strategy will be particularly effective in introducing new topics, such as the "Escalating Need for Strategic Information" or "Understanding Data Warehouse Architecture." |
| 2 | Case Studies and Real- World Examples | Integrate case studies and real-world examples to connect theoretical concepts with practical applications. This will help students understand the relevance and application of topics. |
| 3 | Hands-On Workshops and Labs | Provide hands-on experience through workshops or lab sessions, where studentscan work on practical tasks such as "Dimensional Modelling," "Data Extraction, Transformation, and Loading (ETL)," and "Building a Web-Enabled Data Warehouse." |
| 4 | Group Projects and Collaborative Learning | Encourage collaborative learning through group projects where students work together to solve complex problems or develop parts of a data warehouse system. This strategy promotes teamwork and peer learning. |
| 5 | Flipped Classroom Approach | In a flipped classroom, students are provided with pre-recorded lectures or reading materials before class. Classroom time is then used for discussions, problemsolving, and applying concepts. This approach encourages active learning and better comprehension. |
| 6 | Assessments and Feedback | Regular assessments, including quizzes, assignments, and peer evaluations, should be conducted to gauge student understanding. Timely feedback helps students identify areas of improvement and solidify their learning. |

6. Assessment Details (both CIE and SEE) Continuous Internal Evaluation:

The minimum CIE marks requirement is 40% of maximum marks in each component. CIE

Split up

| Components | | Number | Weightage | Max. Marks | Min. Marks |
|------------|-------------------------------|--------|-----------|------------|---------------|
| (i) | Internal Assessment-Tests (A) | 2 | 50% | 25 | 10 |
| (ii) | Assignments/Quiz/Activity (B) | 2 | 50% | 25 | 10 |
| | Total Marks | | | 50 | 20 |

Final CIE Marks = (A) + (B)

Average internal assessment shall be the average of the 2 test marks conducted.

Semester End Examination:

- 1. Question paper pattern will be ten questions. Each question is set for 20 marks. The medium of the question paper shall be English unless otherwise it is mentioned.
- 2. There shall be 2 question from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have mix of topics under that module if necessary.
- 3. The students have to answer 5 full questions selecting one full question from each module.
- 4. Marks scored will be proportionally scaled down to 50 marks

7. Learning Objectives

| S/L | Learning Objectives | Description |
|-----|------------------------|-------------|

| | - | |
|---|--|--|
| 1 | Analyze the Need for Strategic Information and Data Warehousing | Understand the importance of strategic information in modern organizations. Evaluate the limitations and failures of past decision-support systems. Compare and contrast operational systems with decision-support systems, identifying data warehousing as the most viable solution. |
| 2 | Design and Plan a Data Warehouse | Develop comprehensive project plans for data warehouse implementation, including key phases, team roles, and project management considerations. Define business requirements through dimensional analysis, information packages, |
| | | and identify key metrics and facts necessary for data warehousing. Create architectural plans that align with business requirements, focusing on data design, storage specifications, and information delivery strategies. |
| 3 | Understand and Implement Data Warehouse Architecture | Identify and explain the key architectural components of a data warehouse, including their distinguishing characteristics and types. Assess the infrastructure requirements, including hardware, operating systems, and database software, needed to support data warehouse architecture. Understand the role and significance of metadata in data warehousing, and implement strategies for providing and managing metadata. |
| 4 | Apply Principles of Dimensional Modelling | Transition from business requirements to data design, utilizing the star schema and its variations to organize data effectively. Explore advanced dimensional modelling techniques, including snowflake schemas, aggregate fact tables, and families of stars. Implement ETL (Extract, Transform, Load) processes, ensuring the accurate transformation and loading of data, with a focus on metadata management. |
| 5 | Ensure Data Quality and Management | Recognize the critical importance of data quality in the success of a data warehouse, and identify common challenges and tools for maintaining high-quality data. Implement a data quality initiative and master data management (MDM) strategies to ensure consistent and reliable data across the organization. Match information delivery from the data warehouse to the needs of different user classes, ensuring that data is accessible and relevant to stakeholders. |
| 6 | Leverage OLAP and Web-Enabled Data Warehousing | Understand the demand for Online Analytical Processing (OLAP) and its major features, functions, and implementation considerations within a data warehouse. Design and build web-enabled data warehouses that facilitate web-based information delivery and integration with OLAP tools. Explore the potential of web-based data warehousing to enhance information accessibility and analytical capabilities across an organization. |

8. Course Outcomes (COs) and Mapping with POs/ PSOs Course Outcomes (COs)

COs

Description

M23BCD505C.1
Apply the principles of data warehousing by designing and implementing its core components to meet strategic information needs.

M23BCD505C.2
Develop t a Data Warehouse Project Blueprint.

M23BCD505C.3
Analyse data warehouse architecture, infrastructure, metadata, and dimensional modeling techniques, including ETL processes.

M23BCD505C.4
Inference the importance of data quality and master data management in data warehousing.

CO-PO-PSO Mapping

10. Future with this Subject:

- The future will see more advanced decision-support systems powered by AI and machine learning, making the analysis of historical data and the prediction of trends more sophisticated and accurate.
- Planning, Project Management, and Business Requirements: Future professionals will need to be skilled in agile project management and capable of rapidly adapting data warehousing projects to meet changing business needs. The ability to gather, analyze, and implement business requirements quickly and effectively will be a key skill.

Architectural Components and Metadata: Data warehouse architectures will increasingly leverage cloud-native technologies, micro services, and server less computing to offer greater scalability, flexibility, and cost efficiency. Metadata management will also become more automated, with Aldriven tools helping to classify, manage, and retrieve metadata more efficiently.

| Professional Elective (PE) | M23BCS505D |
|----------------------------|------------|
|----------------------------|------------|

5 Semester

1. Prerequisites

| S/L | Proficiency | Prerequisites |
|-----|---------------------------------|--|
| 1 | Basic Knowledge of Programming: | • Understanding of programming fundamentals (variables, control structures, loops, functions). |

| 2 | Solid Grasp of Core Java: | • | Mastery of Java basics including syntax, data types, operators, and basic OOP concepts. |
|---|---|---|--|
| 3 | Experience with Java Development Environment: | • | Proficiency in using an IDE (like IntelliJ IDEA, Eclipse, or NetBeans). Familiarity with Java development tools (javac, java, jar). |
| 4 | Basic Understanding of Software Development Life Cycle: | • | Knowledge of the phases of software development, from requirement gathering to deployment. |

2. Competencies

| S/L | Competency | KSA Description |
|-----|---|--|
| 1 | Enumerations, Autoboxing, and Annotations | Knowledge: Understand the fundamentals of Enumerations in Java, including the purpose and usage of values() and valueOf() methods. Recognize that Java Enumerations are class types and that they inherit from Enum. Grasp the concept of Autoboxing and Unboxing in Java, particularly how they occur in expressions and the prevention of errors related to primitive and wrapper types. Understand the basics of Annotations in Java, including retention policies, obtaining annotations at runtime using reflection, and different types of annotations like Marker, Single-member, and Built-in annotations. Skills: |
| 2 | Generics | Knowledge: Understand the concept of Generics in Java, including the use of generic classes, methods, and interfaces. Familiarize with bounded types, wildcard arguments, and bounded wildcards in generics. Recognize the significance of type erasure and how it affects generics. Comprehend the limitations and restrictions associated with generics, including ambiguity errors and compatibility with legacy code. Skills: Ability to define and implement generic classes, methods, and interfaces with one or more type parameters. Competent in using bounded types and wildcards to create flexible and typesafe code. Ability to troubleshoot and resolve issues related to generic type erasure and ambiguity errors. |

| | | Capable of integrating generics into existing legacy code without introducing compatibility issues. Attitudes: Develop a careful and thoughtful approach to using generics, prioritizing type safety and code reusability. Value the importance of understanding the underlying mechanics of generics, such as type erasure, to avoid common pitfalls. Embrace a mindset that encourages the use of generics to write cleaner, more maintainable, and robust code. |
|---|-----------------|--|
| 3 | String Handling | Vinderstand the different constructors available for creating String objects and how to determine the length of a string. Familiarize with special string operations, character extraction, comparison, and searching within strings. Grasp the methods available for modifying strings, converting data types using valueOf(), and changing the case of characters. Recognize the differences between String, StringBuffer, and StringBuilder, including their use cases. Skills: Ability to perform various string operations, including comparison, extraction, searching, and modification, in Java. Proficient in using String Buffer and String Builder for efficient string manipulation in performance-sensitive applications. Competent in applying data conversion techniques using valueOf() and case conversion methods. Attitudes: Develop an appreciation for the importance of efficient string handling, particularly in performance-critical applications. Foster a detail-oriented mindset when working with strings to avoid common errors such as Null Pointer Exception or incorrect string manipulation. Embrace best practices for choosing between String, String Buffer, and String Builder based on the specific needs of the application. |

| | | Knowledge • Understand the concept of JDBC and the different types of JDBC drivers. Familiarize with the JDBC packages and the overall process of establishing a database connection using JDBC. Grasp the usage of Statement, Prepared Statement, and Callable Statement objects to execute SQL queries. Recognize the importance of transaction processing, metadata retrieval, handling different data types, and managing exceptions in JDBC. Ability to establish and manage database connections using JDBC in a Java application. |
|---|------|---|
| 5 | JDBC | Proficient in executing SQL queries, processing Result Set data, and handling transactions within a JDBC context. Competent in retrieving and interpreting metadata, managing data types, and handling exceptions in JDBC code. Attitudes: Develop a meticulous approach to database interaction, ensuring efficient and secure data access through JDBC. Foster an awareness of the importance of transaction management in maintaining data integrity and consistency. Embrace best practices for error handling and resource management in JDBC to prevent issues such as resource leaks or SQL injection vulnerabilities. |

3. Syllabus

| J. Syllabus | | | | | | | | | | |
|--|----|------------|----|--|--|--|--|--|--|--|
| ADVANCED JAVA SEMESTER - V | | | | | | | | | | |
| Course Code 23BCS505D CIE Marks 50 | | | | | | | | | | |
| Number of Lecture Hours/Week(L: T: P: S) (3:0:0:0) SEE Marks | | | | | | | | | | |
| Total Number of Lecture Hours 40 Hours Total Marks 100 | | | | | | | | | | |
| Credits | 03 | Exam Hours | 03 | | | | | | | |

Course Objectives:

- 1. Understanding the fundamental concepts of Enumerations and Annotations
- 2. Apply the concepts of Generic classes in Java programs
- 3.Demonstrate the fundamental concepts of String operations
- 4.Design and develop web applications using Java servlets and JSP
- 5. Apply database interaction through Java database Connectivity

Module -1

Enumerations, Autoboxing and Annotations:

Enumerations: Enumeration fundamentals, the values() and valueOf() methods, Java enumerations are class types, enumerations inherits Enum, example, type wrappers,

Autoboxing,: Autoboxing methods, Autoboxing / Unboxing occurs in Expressions, Autoboxing/Unboxing, Boolean and character values, Autoboxing/Unboxing helps prevent errors,

A word of warning Annotations, Annotation basics, specifying retention policy, obtaining annotations at run time by use of reflection, Annotated element interface, Using default values, Marker Annotations, Single member annotations, Built in annotations. **Textbook 1: Chapter 12**

Module -2

String Handling: The String Constructors, String Length, Special String Operations, Character Extraction, String Comparison, Searching Strings, Modifying a String, Data Conversion Using valueOf(), Changing the case of characters within a String, String Buffer, String Builder Textbook 1: Chapter 15

Module -3

Applets: Introduction, Types of Applets, Applet Basics, Applet Architecture, An Applet Skeleton, Applet Initialization & Termination, Simple Applet Display Methods, HTML Applet Tag, Passing parameters & Applets. Applet Context and showdocument().

Swings: Introduction. Origins, Features, The MVC Connection, Componenets and Containers, Swing Packages, Simple Swing Application, Creating Swing Applet, Exploring Swings Textbook 1: Chapter 23, 31, 32

Module -4

Servelet: The life cycle of a servlet; A simple servlet; the servlet API; The javax.servlet package, Reading servlet parameter; the javax.servlet.http package; Handling HTTP Requests and Responses; using Cookies; Session Tracking, Java Server Pages (JSP); JSP tags, Variables and Objects, Methods, Control statements, Loops, Request String, Parsing other information, User sessions, Cookies, Session Objects

Textbook 1: Chapter 38, Textbook 2: Chapter 11

Module -5

The concept of JDBC; JDBC Driver Types; JDBC packages; A brief overview of the JDBC Process; Database Connection; Associating the JDBC/ODBC Bridge with the Database; Statement Objects; ResultSet; Transaction Processing; Metadata, Data Types; Exceptions.

Textbook 2: Chapter 6

TEXTBOOKS:

- 1. Herbert Schildt: JAVA the Complete Reference. 9th Edition, Tata McGraw-Hill
- 2. Jim Keogh, The Complete Reference J2EE, Tata McGraw-Hill

REFERENCE BOOKS:

- 1. Y. Daniel Liang: Introduction to JAVA Programming, 7th Edition, Pearson Education, 2007
- 2. Holzner, Steven, Java2 Programming Black Book, McGraw-Hill Education.

4. Syllabus Timeline

| S/L Syllabus Timeline | Description |
|-----------------------|-------------|
|-----------------------|-------------|

| | | 1 3 3 | | | | | |
|---|-----------|--|--|--|--|--|--|
| | | Week 1: Enumerations | | | | | |
| | | • Topics: O Enumeration fundamentals O values() and valueOf() | | | | | |
| | | methods o Java enumerations as class types o Enumerations | | | | | |
| | | inheriting Enum o Example of using enumerations | | | | | |
| | | • Exercises: • Practice creating enumerations and using | | | | | |
| | | methods like values() and valueOf(). | | | | | |
| | | Implement a simple application using enums.Week 2: Autoboxing | | | | | |
| | | | | | | | |
| | | | | | | | |
| | | Autoboxing in expressions O Boolean and | | | | | |
| | | character values | | | | | |
| | | o Preventing errors with Autoboxing/Unboxing | | | | | |
| | Week 1-3: | • Exercises: O Create examples showing how | | | | | |
| 1 | | Autoboxing/Unboxing works. | | | | | |
| | | Discuss scenarios where Autoboxing can prevent errors. | | | | | |
| | | Week 3: Annotations | | | | | |
| | | • Topics: ○ Annotation basics ○ Specifying | | | | | |
| | | retention policies o Obtaining annotations at runtime | | | | | |
| | | using reflection | | | | | |
| | | AnnotatedElement interface | | | | | |
| | | o Using default values, Marker Annotations, and Single-member | | | | | |
| | | annotations | | | | | |
| | | o Built-in annotations | | | | | |
| | | • Exercises: • Create custom annotations and retrieve them | | | | | |
| | | using reflection. O Discuss the use cases for marker | | | | | |
| | | annotations. | | | | | |
| | | | | | | | |
| | Week 4-6: | Week 4: Generics: Introduction | | | | | |
| 2 | WEEK 4-0: | • Topics: O What are | | | | | |
| | | Generics? | | | | | |

| | | o Simple Generics Example o |
|---|-----------|---|
| | | Generic Class with Two Type Parameters |
| | | o General Form of a Generic Class |
| | | • Exercises: O Implement basic generic classes. |
| | | Discuss the importance of type safety with Generics. |
| | | Week 5: Generics: Advanced |
| | | • Topics: ○ Bounded Types and Using Wildcard |
| | | Arguments o Bounded Wildcards o Creating a |
| | | Generic Method O Generic Interfaces |
| | | • Exercises: O Implement methods with bounded |
| | | types and wildcards. |
| | | o Practice creating generic interfaces. |
| | | Week 6: Generics: Expert Topics |
| | | • Topics: ○ Raw types and Legacy code ○ Generic Class |
| | | Hierarchies ○ Erasure and Ambiguity errors ○ Some |
| | | Generic Restrictions |
| | | • Exercises: O Explore the concept of erasure and |
| | | how it impacts code. O Analyze ambiguity errors in |
| | | code and learn how to resolve them. |
| | | |
| | | W 17 Ct : H III |
| | | Week 7: String Handling • Topics: ○ The String Constructors, String Length ○ Special |
| | | String Operations, Character Extraction o String Comparison, |
| | | Searching Strings, Modifying a String O Data Conversion Using |
| | | valueOf() |
| | | • Changing the case of characters within a String |
| | | • Exercises: O Practice with String manipulation methods. |
| | Week 7-8: | Write programs that utilize the valueOf() method and string |
| 3 | | modification techniques. |
| | | Week 8: String Handling Continued |
| | | • Topics: |
| | | o StringBuffer, StringBuilder |
| | | • Exercises: O Compare the performance of String, |
| | | StringBuffer, and StringBuilder in various scenarios. |
| | | o Implement string manipulations using String Builder for efficiency. |
| | | |

| | | Database Connection O Associating the JDBC/ODBC Bridge with the Database O Statement Objects; ResultSet; Transaction Processing O Metadata, Data Types, Exceptions Exercises: O Connect to a database using JDBC. | | | | | | | |
|----|------------|--|--|--|--|--|--|--|--|
| | | Execute SQL queries and handle results using JDBC. Review and Project Topics: Review of all topics | | | | | | | |
| 10 | Week 11-12 | Discussion of key concepts and difficult areas Project: Develop a final project that integrates multiple topics from the syllabus (e.g., a web application using Servlets, JSP, JDBC with Generics and Annotations). | | | | | | | |
| 4 | Week 9: | Week 9: Servlets Topics: The life cycle of a servlet; A simple servlet; the servlet API ○ The javax.servlet package, Reading servlet parameters ○ The javax.servlet.http package Handling HTTP Requests and Responses; using Cookies; Session Tracking ○ Java Server Pages (JSP); JSP tags, Variables and Objects, Methods, Control statements, Loops Exercises: ○ Develop a simple servlet-based application. ○ Implement session tracking and cookie handling. | | | | | | | |
| 5 | Week 10: | Week 10: JDBC • Topics: ○ Concept of JDBC; JDBC Driver Types; JDBC packages ○ A brief overview of the JDBC Process | | | | | | | |

5. Teaching-Learning Process Strategies

| S/L | TLP Strategies: | Description |
|-----|---|--|
| 1 | Problem-Based Learning (PBL) | Engage students with real-world problems that require advanced Java knowledge to solve. For instance, tasks could involve optimizing a legacy application or implementing a micro services architecture. It Encourages deep understanding, critical thinking, and application of complex Java concepts in practical situations. |
| 2 | Hands-On Coding Sessions | Incorporate frequent coding exercises where students write, debug, and optimize Java code. Projects could include building scalable web applications, implementing multi-threaded programs, or designing custom data structures. It will enhances coding proficiency and reinforces theoretical knowledge through practical application |
| 3 | Use of Advanced Java Frameworks and Libraries | Introduce and work extensively with popular Java frameworks such as Spring, Hibernate, and Apache Kafka. Teach students how to integrate these tools into their projects. This will helps the students to prepare for industry demands, as these frameworks are widely used in enterprise-level development. |

| 4 | Flipped Classroom Model | Assign reading or video lectures as homework, and use class time for discussions, problem-solving sessions, and hands-on activities. |
|---|--|--|
| 5 | Project-Based Learning | Assign a capstone project where students must build a complete application from scratch, incorporating advanced Java concepts. |
| 6 | Regular Assessments and Feedback | Conduct quizzes, coding challenges, and peer assessments to regularly gauge student understanding. Provide detailed feedback to guide improvement. |
| 7 | Guest Lectures and Industry Interaction | Invite industry professionals to give talks on current trends, challenges, and opportunities in Java development. Arrange for students to work on live projects or case studies from the industry. |

6. Assessment Details (both CIE and SEE) Continuous Internal Evaluation:

The minimum CIE marks requirement is 40% of maximum marks in each component. CIE Split up

| | Components | Number | Weightage | Max. Marks | Min. Marks |
|------|-------------------------------|--------|-----------|------------|---------------|
| (i) | Internal Assessment-Tests (A) | 2 | 50% | 25 | 10 |
| (ii) | Assignments/Quiz/Activity (B) | 2 | 50% | 25 | 10 |
| | TotalM | 50 | 20 | | |

Final CIE Marks =(A) + (B) Average

internal assessment shall be the average of the 2 test marks conducted.

Semester End Examination:

1. Question paper pattern will be ten questions. Each question is set for 20marks. The medium of the

question paper shall be English unless otherwise it is mentioned.

- 2. There shall be 2 question from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have mix of topics under that module if necessary.
- 3. The students have to answer 5 full questions selecting one full question from each module.

4. Marks scored will be proportionally scaled down to 50 marks 7. Learning Objectives

| S/L | Learning Objectives | Description |
|-----|-------------------------|--|
| 1 | Enumerations | Understand the fundamentals of Java enumerations, including how to use values() and valueOf() methods, and explore their class-like properties. |
| 2 | Autoboxing and Unboxing | Grasp the concepts of autoboxing and unboxing in Java, including how these processes work with expressions and how they help prevent errors. |
| 3 | Annotations | Learn about Java annotations, their basics, and how to specify retention policies and obtain annotations at runtime. |
| 4 | Generics | Understand the use of generics in Java, including creating generic classes, methods, and understanding the restrictions and errors associated with generics. |
| 5 | String Handling | Master string manipulation and handling in Java, including various string operations and conversions. |
| 6 | Servlets | Understand the life cycle and working of Java servlets, including handling HTTP requests and responses. |
| 7 | JDBC | Learn the fundamentals of JDBC, including connecting to databases, executing queries, and handling database results. |

8. Course Outcomes (COs) and Mapping with POs/ PSOs

Course Outcomes (COs)

| Cos | Description | | | | |
|--|--|--|--|--|--|
| M23BCS505D.1 | Understanding the fundamental concepts of Enumerations and Annotations | | | | |
| M23BCS505D2 | pply the concepts of Generic classes in Java programs | | | | |
| M23BCS505D3 | Demonstrate the concepts of String operations in Java | | | | |
| M23BCS505D4 Develop web based applications using Java servlets and JSP | | | | | |
| M23BCS505D5 | Illustrate database interaction and transaction processing in Java | | | | |

CO-PO-PSO Mapping

10. Future with this Subject:

1. Career Opportunities

- Enterprise Application Development: Advanced Java is extensively used in building enterprise-level applications, especially with frameworks like Spring, Hibernate, and Java EE.
- Backend Development: A solid grasp of Advanced Java can lead to roles focusing on backend development, where you manage server-side logic, databases, and integration with front-end components.
- **Mobile App Development (Android)**: While Android development has shifted towards Kotlin, a deep knowledge of Java is still valuable for maintaining and upgrading older applications.
- **Big Data Technologies**: Java is a preferred language for working with big data technologies like Apache Hadoop and Apache Kafka.
- **Cloud Computing**: With cloud services like AWS and Google Cloud supporting Java, there are numerous opportunities in cloud-based application development.
- **Microservices Architecture**: Advanced Java skills are critical in building and deploying microservices, which is a growing trend in software architecture.
- **DevOps Roles**: Java knowledge is essential in automating processes, continuous integration, and deployment pipelines.

2. Technological Advancements

- **Java in AI and ML**: Though Python is more popular for AI and ML, Java's ecosystem is growing, with libraries like Deeplearning4j making it relevant for these technologies.
- Internet of Things (IoT): Java's portability makes it a strong contender for IoT applications, especially in embedded systems.
- **Blockchain Development**: Java's robustness and security features make it suitable for developing blockchain solutions.

3. High Demand and Job Security

- Companies consistently seek Java developers, ensuring long-term demand and job security.
- Many legacy systems still run on Java, so there's always a need for skilled professionals to maintain and upgrade these systems.

4. Continuous Learning and Growth

- Mastering Advanced Java often leads to learning more about system architecture, design patterns, and best practices in software development.
- It also opens doors to learning and integrating other technologies like Python, JavaScript, and various cloud platforms, further enhancing your skill set.

5. Entrepreneurship

With Advanced Java skills, you could start your own tech venture, offering software solutions, consulting, or creating products that serve a niche market.

| 5th Semester | Project Work (PW) MINI PROJECT | M23BCD506 |
|--------------|-----------------------------------|-----------|
|--------------|-----------------------------------|-----------|

1. Prerequisites

| S/L | Proficiency | Prerequisites |
|-----|---|--|
| 1 | Basic Engineering Principles | Fundamental courses in the respective engineering stream |
| 2 | Application of Theoretical Knowledge in Practical Scenarios | Knowledge of the core subjects of the respective stream |
| 3 | Project Design and Planning | Familiarity with design tools and project management techniques. |
| 4 | Multidisciplinary Collaboration | Basic knowledge of related disciplines (e.g., Mechanical students should have a basic understanding of Electronics, etc.). |
| 5 | Technical Communication | Writing technical reports and presenting technical content |

2. Competencies

| S/L | Competency | KSA Description |
|-----|---|---|
| 1 | Problem Identification and Analysis | Knowledge: Understanding the problem domain and relevant engineering concepts. Skill: Ability to analyze and break down complex problems into manageable parts. Attitude: Attention to detail and a systematic approach to problem-solving. |

2023Scheme - 5^{th} to 6^{th} Sem Competency Based Syllabi for B.E in CS(DS)

| 2 | Solution Design and Implementation | Knowledge: Familiarity with design methodologies and tools. Skill: Proficiency in creating prototypes or models using appropriate technologies. Attitude: Creativity and innovation in developing solutions. |
|---|--|--|
| 3 | Interdisciplinary Collaboration | Knowledge: Understanding of basic concepts from other engineering disciplines. Skill: Effective communication and teamwork in a multidisciplinary environment. Attitude: Openness to different perspectives and willingness to collaborate. |
| 4 | Technical Documentation and Presentation | Knowledge: Standards and practices for technical writing and reporting. Skill: Ability to document the project effectively and present it to an audience. Attitude: Confidence and clarity in communication. |
| 5 | Project Management | Knowledge: Understanding of project timelines, resource allocation, and risk management.Skill: Ability to plan, execute, and monitor a project from start to finish.Attitude: Responsibility and accountability in managing project tasks. |

3. Project Timeline

| S/L | Timeline | Description |
|-----|---|--|
| 1 | Week 1-2: Introduction and Problem Definition | Students will define their project problem, scope, and objectives with the guidance of their mentors. |
| 2 | Week 3-4: Research and Feasibility Study | Conduct background research, explore existing solutions, and evaluate the feasibility of different approaches. |
| 3 | Week 5-6: Design and Planning | Develop a detailed project plan, including design specifications, timelines, and resource requirements. |
| 4 | Week 7-8: Prototype Development | Begin building the initial prototype or model, focusing on core functionalities. |
| 5 | Week 9-10: Testing and Refinement | Test the prototype, identify issues, and refine the design to improve performance. |
| 6 | Week 11: Final Implementation and Documentation | Complete the final implementation of the project and prepare detailed documentation. |

| | 7 | Week 12: Presentation and | Present the project to a committee for evaluation, followed by a Q&A |
|---|---|---------------------------|--|
| ı | , | Evaluation | session. |

4. Assessment Details (both CIE and SEE) Continuous Internal Evaluation:

The CIE marks shall be awarded by a committee consisting of the Head of the concerned Department and two senior faculty members of the Department, one of whom shall be the Guide.

The CIE marks awarded for the project work, shall be based on the evaluation of the project work Report, project presentation skill, and question and answer session in the ratio 50:25:25. The marks awarded for the project report shall be the same for all the batch mates.

SEE: There shall be no SEE.

5. Learning Objectives

| S/L | Learning Objectives | Description |
|-----|--|--|
| 1 | Identify and Analyze Engineering Problems | Students will learn to identify real-world engineering problems, analyze them, and propose feasible solutions. |
| 2 | Design and Implement Solution(s) | Students will gain experience in designing and implementing engineering solutions using appropriate tools and methodologies. |
| 3 | Collaborate Effectively in Teams | Students will develop teamwork skills through collaboration with peers from different engineering disciplines. |
| 4 | Communicate Technical Information | Students will enhance their ability to document and present technical information effectively. |

6. Course Outcomes (COs) and Mapping with POs/ PSOs

Course Outcomes (COs)

| Course Outcome | 23 (233) | | | | | | |
|----------------|---|--|--|--|--|--|--|
| Cos | Description | | | | | | |
| M23BCS506.1 | Apply engineering principles to identify, formulate, and solve real-world problems. | | | | | | |
| M23BCS506.2 | Design and develop prototypes or models that address specific engineering challenges. | | | | | | |
| M23BCS5063 | Collaborate with team members to complete the project successfully. | | | | | | |
| M23BCS506.4 | Document and present the project effectively, demonstrating clear communication skills. | | | | | | |

6. Future with this Subject

The mini-project course will serve as a foundation for more complex and comprehensive project work in the final year, such as the capstone project. The skills developed here, including problem-solving, design, teamwork, and communication, will be crucial for successful completion of future courses and for professional practice in engineering.

| | Ability Enhancement Course (AE) | |
|--------------------------|---------------------------------|------------|
| 5 th Semester | RESEARCH METHODOLOGY AND | M23BRMK507 |
| | INTELLECTUAL PROPERTY RIGHTS | |

1. Prerequisites

| S/L | Proficiency | Prerequisites |
|-----|---|--|
| 1 | Basic Understanding of Research Concepts | Before delving into the specifics of engineering research and intellectual property rights, students should have a foundational understanding of what research is, its objectives, and its significance, particularly in the context of engineering. |
| 2 | Familiarity with Ethics in Research | Basic knowledge of ethics, including common ethical dilemmas and misconduct in research, is essential. This includes understanding issues related to authorship and ethical considerations in the research process. |
| 3 | Literature Review Skills | Students should have prior experience in conducting literature reviews, including familiarity with bibliographic databases such as Web of Science, Google Scholar, and effective search strategies. This will help them in understanding and analyzing existing knowledge in their research field. |
| 4 | Introduction to Intellectual Property Rights | A preliminary understanding of intellectual property rights, including patents, copyrights, trademarks, and industrial designs, would be beneficial. This knowledge should include the role of IP in society and basic IP laws, especially in the Indian context. |
| 5 | Technical Reading and Writing Skills | Competence in reading and comprehending technical documents, including research papers, datasheets, and legal texts, is crucial. Additionally, students should have basic knowledge of how to structure a journal paper and the importance of proper citation and attribution in academic writing. |

2. Competencies

| S/L | Competency | KSA Description |
|-----|---------------------------------|--|
| 1 | Understand the research process | Knowledge: Types of research (exploratory, descriptive, explanatory, etc.) Research methodologies (qualitative, quantitative, mixed) Research design (experimental, correlation, causal- comparative) Research ethics principles Skills: Identify research problems, Formulate research questions and objectives, Develop research proposals, Conduct literature reviews Attitudes: Curiosity and inquisitiveness, Critical thinking and problem-solving, Intellectual honesty and integrity |

| 2 | Apply ethical principles to | Knowledge: Ethical guidelines for research Ethical issues in research (plagiarism, data fabrication, etc.) Researcher-participant relationships Skills: Identify potential ethical dilemmas in research Develop ethical protocols for research Obtain |
|---|---|--|
| 2 | research | informed consent from participants Attitudes: Respect for human subjects, Commitment to research integrity Responsibility for the ethical conduct of research |
| 3 | | Knowledge: Sources of research literature (databases, journals, books) Literature review structure and organization |
| | Conduct effective literature reviews | Critical appraisal of research articles Skills: Search for relevant research literature, Evaluate and synthesize research findings, Organize and present literature review findings Attitudes: Persistence and thoroughness, Open-mindedness to different perspectives, Attention to detail |
| 4 | Design research studies | Knowledge: Research designs (experimental, correlational, causal-comparative), Sampling techniques, Data collection methods (surveys, interviews, observations) Skills: Develop research instruments, Select appropriate research design, Develop data collection plans Attitudes: Creativity and innovation, Flexibility and adaptability, Attention to detail |
| 5 | Understand the concept of intellectual property | Knowledge: Definition and types of intellectual property (patents, copyrights, trademarks, trade secrets, industrial designs) Legal framework for intellectual property protection Economic and social importance of intellectual property Skills: Identify intellectual property assets within an organization or project Understand the basics of intellectual property valuation Attitudes: Appreciation for the value of intellectual property, Respect for intellectual property rights, Awareness of intellectual property issues in business and research |

3. Syllabus

| 3 | | | | | | | |
|---|------------|-----------|----|--|--|--|--|
| RESEARCH METHODOLOGY & INTELLECTUAL PROPERTY RIGHTS | | | | | | | |
| SEMESTER – V | | | | | | | |
| Course Code | M23BRMK507 | CIE Marks | 50 | | | | |
| Number of Lecture Hours/Week(L: T: P: S) | (1:2:0:0) | SEE Marks | 50 | | | | |

| Total Number of Lecture Hours | 25 hours Theory | Total Marks | 100 |
|-------------------------------|-----------------|-------------|-----|
| Credits | 02 | Exam Hours | 03 |

Course Objectives:

- 1. To know the meaning of engineering research.
- 2. To know the procedure of Literature Review and Technical Reading.
- 3. To know the fundamentals of patent laws and drafting procedure.
- 4. To gain awareness of the copyright laws and subject matters of copyrights and designs.
- 5. To interpret and learn the basic principles of design rights.

Module -1

Introduction: Meaning of research, objectives of engineering research, and motivation in engineering research, types of engineering research, finding and solving a worthwhile problem.

Ethics in engineering research: Ethics in engineering research practice, types of research misconduct, and ethical issues related to authorship.

Module -2

Journal Paper document: structure and approach, Literature Review and Technical Reading: New and existing knowledge in research field, analysis and synthesis of prior art. Bibliographic databases like web of science, Google and Google scholar. Effective search: the way forward, introduction to technical reading conceptualizing research, critical and creative reading, taking notes while reading, reading mathematics and algorithms, reading a datasheet.

Attributions and Citations: Giving credit wherever due, citations: functions and attributes, impact of title and keywords on citations, knowledge flow through citation, styles for citations, citing datasets,

acknowledgments and attributions, what should be acknowledged, acknowledgments in books and dissertations, dedication vs. acknowledgments.

Module -3

Introduction to Intellectual Property (IP): Role of IP in the economic and cultural development of the society, IP governance, IP as a global indicator of innovation, origin of IP, history of IP in India. Major amendments IP laws and acts in India. IP Organizations in India, schemes and programs.

Patents: Conditions for obtaining a patent protection, to patent or not to patent an invention. Rights associated with patents and enforcement of patent rights. Non-patentable matters. Patent infringements and avoiding public disclosure of an invention before patenting.

Process of Patenting: Prior art search, choice of application to be filed, patent application forms, fee structure, types of patent applications. Jurisdiction of filing patent application, publication, pre-grant opposition, examination, and grant of a patent. Validity of patent protection, post-grant opposition, and commercialization of a patent. Need for a patent attorney/agent. Can a worldwide patent be obtained? Do I need first to file a patent in India? Commonly used terms in patenting, National bodies dealing with patent affairs, utility models. Case Studies on Patents. Case study of Curcuma (Turmeric) Patent, Case study of Neem Patent, Case study of Basmati patent.

Module -4

Copyrights and Related Rights: Classes of copyrights, criteria for copyright, ownership of copyright, and copyrights of the author. Copyright infringement a criminal offence and cognizable offence. Fair use doctrine. Copyrights and internet. Non-copyright work. Copyright registration. Judicial powers of the registrar of copyrights. Fee structure, copyright symbol, validity of copyright, copyright profile of India. Transfer of copyrights to a publisher. Copyrights and the words 'adaptation', 'Indian work', 'joint authorship', 'publish'. Copyright society, copyright board, and copyright enforcement advisory council (CEAC). International copyright agreements, conventions and treaties.

Case Studies of Copyrights cases: Hawkins Cooker Ltd. vs. Magicook Appliances, KSRTC copyright case. Trademarks registration: prior art search, eligibility criteria, who can apply for a trademark. Acts and laws. Designation of trademark symbols. Classification of trademarks. Registration of a trademark is not compulsory. Validity of trademark. Types of trademark registered in India. Trademark registry and process for trademarks registration. Case Studies on Trademarks: Coca-cola company vs. Bisleri international PVT. Ltd, and Yahoo! Inc. vs. Akash Arora & Anr

Module -5

Industrial Designs: Eligibility criteria, Acts and laws to govern industrial designs. Design rights. Enforcement of design rights. Non-protectable industrial designs India. Protection term. Procedure for registration of industrial designs: Prior art search, application for registration, duration of the registration of a design. Importance of design registration. Cancellation of the registered design. Application forms.

Classification of industrial designs. Designs registration trend in India. International treaties.

Famous case of: Apple inc. vs. Samsung electronics co.

Geographical Indications (GI): acts, laws and rules pertaining to GI. Ownership of GI. Rights granted to the holders. Registered GI in India. Identification of registered GI. Classes of GI. Non-registerable GI. Protection of GI. Collective or certification marks. Enforcement of GI rights. Procedure for GI registration documents required for GI registration. GI ecosystem in India.

Case Studies on GI tags: Case Study of Mysore Silk, Darjeeling Tea, Kancheepuram Silk Sarees, case of Goa's Feni

4. Syllabus Timeline

| S/L | Syllabus Timeline | Description |
|-----|--|---|
| 1 | Week 1-3: Introduction to Research and Intellectual Property | Week 1: Research fundamentals, types of research, research process, ethics Week 2: Intellectual property overview, patents, trademarks Week 3: Copyrights, industrial designs, geographical indications |
| 2 | Week 4-6: Literature Review, Research Design, and Data Analysis | Week 5: Research design, sampling, data collection methods |

| 3 | Week 7-9: Intellectual Property Law and Enforcement | Week 7: Patent law, patent search, patent drafting Week 8: Trademark law, trademark search, brand management Week 9: Copyright law, fair use, digital copyright |
|---|--|---|
| 4 | Week 10-12: Intellectual Property and Business | Week 10: Intellectual property valuation, licensing, and commercialization Week 11: Intellectual property strategy and management Week 12: Case studies on intellectual property disputes |
| 5 | Week 13 | Review and Final Exam |

5. Teaching-Learning Process Strategies

| S/L | TLP Strategies: | Description |
|-------------------|----------------------------|---|
| 1 | Lecture Method | Utilize various teaching methods within the lecture format to reinforce competencies. |
| 2 Video/Animation | | Incorporate visual aids like videos/animations to enhance understanding of research methodology concepts. |
| 3 | Collaborative Learning | Encourage collaborative learning for improved competency application. |
| 4 | Real-World Application | Discuss practical applications to connect theoretical concepts with real-world competencies. |
| 5 | Flipped Class Technique | Utilize a flipped class approach, providing materials before class to facilitate deeper understanding of competencies |

6. Assessment Details (both CIE and SEE) Continuous Internal Evaluation:

The minimum CIE marks requirement is 40% of maximum marks in each component. CIE Split up

| Components | | Number | Weightage | Max. Marks | Min. Marks |
|------------|-------------------------------|------------------------------------|-----------|------------|---------------|
| (i) | Internal Assessment-Tests (A) | nternal Assessment-Tests (A) 2 50% | | 25 | 10 |
| (ii) | Assignments/Quiz/Activity (B) | 2 | 50% | 25 | 10 |
| | Total M | larks | | 50 | 20 |

Final CIE Marks =(A) + (B)

Average internal assessment shall be the average of the 2 test marks conducted.

Semester End Examination:

- 1. Question paper pattern will beten questions. Each question is set for 20 marks. The medium of the question paper shall be English unless otherwise it is mentioned.
- 2. There shall be 2 question from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have mix of topics under that module if necessary.
- 3. The students have to answer 5 full questions selecting one full question from each module.
- 4. Marks scored will be proportionally scaled down to 50 marks

7. Learning Objectives

| _ | | <u> </u> | |
|---|-----|---------------------|-------------|
| | S/L | Learning Objectives | Description |

| 1 | Understand the fundamental principles of research methodology. | Research objectives should be clear and based on curiosity. A systematic approach, inspired by the scientific method, ensures transparency and replication. The goal should be to add something new or distinctive, exploring and questioning existing knowledge. |
|---|--|--|
| 2 | Apply ethical considerations in engineering research. | Students as researchers must obtain informed consent from study participants, ensure voluntary participation, protect participant identities and confidentiality, prevent harm to participants, and submit proposals to an institutional review board (IRB) for ethical approval before data collection, ensuring compliance with research objectives and balancing safety with research objectives. |
| 3 | Conduct effective literature reviews and technical reading. | Students will learn to conduct a literature review, start by searching for relevant sources, evaluating and selecting them based on quality and relevance, identifying themes, debates, and gaps, outlining your findings logically, and writing your review. Analyze, critique, and compare different sources, highlighting how your research contributes to the ongoing scholarly conversation. |
| 4 | Identify and utilize proper attribution and citation styles. | Different disciplines use specific citation styles, such as APA, MLA, or Chicago. In-text citations include author's name and publication year. Reference lists or bibliographies should be compiled at the end of the work. Book citations include author(s), title, publisher, and publication year. Journal article citations include author(s), title, journal name, volume, issue, and publication year. |
| 5 | Gain knowledge of different forms of intellectual property (IP) protection. | Patents, copyrights, and trade secrets are legal rights granted by government agencies to inventors, protecting novel processes, machines, and compositions of matter. Trademarks safeguard brand names and symbols, while trade secrets provide confidential information for competitive advantage. |
| 6 | Understand the patenting process and its importance. Recognize the significance of copyrights, trademarks, industrial designs, and geographical indications. | A patent is a legal shield granted by a government authority to inventors, providing exclusive rights to an original invention. There are three main types: utility patents, plant patents, design patents, trademarks, copyrights, industrial designs, and geographical indications. Utility patents cover inventions like machines, software, and chemical formulations, while plant patents safeguard unique plant characteristics. Design patents protect product ornamental appearance. Trademarks help build brand identity and prevent confusion. |
| 7 | Identify relevant IP organizations and government schemes in India. | The Indian government initiatives include CIPAM, IPRs in School Syllabus, Patent Facilitation Program, National IPR Policy, Technology and Innovation Support Centers, Start-up India, Make in India, National IP Awards, Patent Prosecution Highway, border measures, and support for startups and MSMEs. |

8. Course Outcomes (COs) and Mapping with POs/ PSOs

Course Outcomes (COs)

| COs | Description |
|--------------|--|
| M23BRMK507.1 | Interpret the ethical issues in engineering research, including identifying types of research misconduct and evaluating the impact of ethical practices on research outcomes. |
| M23BRMK507.2 | Analyze literature from diverse bibliographic databases, critically appraise existing research, and synthesize prior art to develop a comprehensive understanding of a chosen research topic. |
| M23BRMK507.3 | Apply appropriate citation styles and techniques, ensuring proper attributions in academic writing to maintain ethical standards and enhance the credibility of research work. |
| M23BRMK507.4 | Apply the principles of intellectual property rights, including patents, copyrights, and trademarks, to assess the eligibility of an invention or creative work for protection, and navigate the processes for registration and enforcement. |
| M23BRMK507.5 | Analyze the role of intellectual property in economic and cultural development, and explain the historical evolution and contemporary relevance of IP laws and acts, particularly in the Indian context. |

CO-PO-PSO Mapping

| COs/POs | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 | PSO1 | PSO2 |

10. Future with this Subject:

- 1. Advanced Research Opportunities:
- PhD and Postdoctoral Research: The course equips mechanical engineers with essential research skills, making them strong candidates for advanced studies. This can lead to specialization in emerging fields like computational mechanics, renewable energy systems, and smart manufacturing.
- Interdisciplinary Research: Understanding research methodology enables mechanical engineers to collaborate on interdisciplinary projects, combining mechanical engineering with fields like materials science, robotics, and artificial intelligence.

2. Innovation and Product Development:

- Patentable Innovations: Knowledge of intellectual property rights allows engineers to protect their innovations, leading to the development of patentable technologies. This is particularly relevant in industries like automotive, aerospace, and manufacturing, where innovation is key to competitiveness.
- Start-ups and Entrepreneurship: The course provides a foundation for engineers to start their own ventures, focusing on innovative mechanical products or services. Understanding IP can help secure funding and protect their business ideas.
- 3. Career in Research and Development (R&D):
- Industry R&D Roles: Mechanical engineers with strong research methodology skills are valuable assets in R&D departments. They can lead projects that require rigorous research, data analysis, and the development of new technologies or processes.
- Government and Private Research Organizations: Opportunities in organizations like CSIR (Council of Scientific & Industrial Research), DRDO (Defense Research and Development Organization), or private research labs, where engineers can contribute to national and international projects.

4. Consulting and Advisory Roles:

- IP Consulting: Engineers with expertise in intellectual property rights can work as consultants, advising companies on patenting strategies, IP management, and innovation protection.
- Research Methodology Expert: Mechanical engineers can also serve as advisors or consultants for research projects, helping organizations design and implement robust research methodologies.

5. Teaching and Academia:

- Faculty Positions: With advanced knowledge in research methodology and IP, mechanical engineers can pursue teaching careers in universities or technical institutes, contributing to the next generation of engineers.
- Curriculum Development: They can also be involved in developing or enhancing engineering curricula, incorporating modern research methods and IP considerations into mechanical engineering programs.

6. Contribution to Sustainable Development:

- Innovations for Sustainability: Mechanical engineers can apply their research skills to develop sustainable technologies, focusing on renewable energy, energy efficiency, and reducing the environmental impact of mechanical systems.
- Policy Making: With an understanding of the societal impact of engineering solutions, they can contribute to policy-making processes, particularly in areas related to environmental sustainability and technology regulation.

This course lays the foundation for mechanical engineers to not only excel in their current roles but also to explore new horizons in research, innovation, and entrepreneurship, making a significant impact on their field and society.

| 5 th Semester | Basic Science (BS) ENVIRONMENTAL STUDIES | M23BESK508 |
|--------------------------|--|------------|

1. Prerequisites

| S/L | Proficiency | Prerequisites |
|-----|--|--|
| 1 | Understanding Ecosystems | Basic knowledge of biology, environmental science, and ecological systems. |
| 2 | Comprehending Natural Resource Management | Familiarity with energy systems, environmental management, and global sustainability practices. |
| 3 | Knowledge of Environmental Pollution | Understanding of chemical processes, industrial impacts, and environmental science fundamentals. |
| 4 | Addressing Global Environmental Concerns | Knowledge of climate science, environmental policies, and global ecological challenges. |
| 5 | Awareness of Environmental Legislation | Familiarity with national and international environmental laws, policies, and regulations. |

2. Competencies

| S/L | Competency | KSA Description | | | | | |
|-----|--------------------------------------|--|--|--|--|--|--|
| 1 | Ecosystem Analysis | Knowledge: Ecosystem structure, sustainability principles, SDGs. Skills: Identifying ecosystem components, and understanding sustainability targets. Attitudes: Appreciating biodiversity, and promoting sustainability. | | | | | |
| 2 | Resource Management | Knowledge : Renewable and non-renewable energy systems, sustainable practices. Skills : Analyzing case studies, and evaluating energy systems. Attitudes : Supporting sustainable resource use, and critical thinking on global issues. | | | | | |
| 3 | Pollution Mitigation | Knowledge: Pollution sources, impacts, and legislation. Skills: Assessing pollution control measures, and implementing waste management strategies. Attitudes: Advocating for environmental protection, and responsible waste disposal. | | | | | |
| 4 | Global Environmental Awareness | Knowledge: Climate change, groundwater depletion, global policies. Skills: Investigating global environmental challenges, and proposing solutions. Attitudes: Engaging in global environmental discussions, and supporting international efforts. | | | | | |
| 5 | Environmental Legal Framework | Knowledge: Key environmental acts and regulations. Skills: Applying legal knowledge to environmental issues, and understanding EIA processes. Attitudes: Valuing legal frameworks, and ensuring compliance with environmental laws. | | | | | |

3. Syllabus

| ENVIRONMENTAL STUDIES SEMESTER – V | | | | | | | |
|--|------------|-------------|-----|--|--|--|--|
| Course Code | M23BESK508 | CIE Marks | 50 | | | | |
| Number of Lecture Hours/Week(L: T: P: S) | (2:0:0:0) | SEE Marks | 50 | | | | |
| Total Number of Lecture Hours | 24 Hours | Total Marks | 100 | | | | |
| Credits | 02 | Exam Hours | 02 | | | | |

Course Objectives: Students will be able

- 1. Understand the structure and function of various ecosystems like forests, deserts, wetlands, rivers, oceans, and lakes.
- 2. Explore natural resource management techniques, including energy systems and disaster management, and assess their sustainability.
- 3. Examine environmental pollution sources and impacts, and learn corrective and preventive measures alongside waste management strategies.
- 4. Investigate global environmental issues such as climate change and groundwater depletion, and the role of environmental legislation in addressing these issues.

Module -1

ECOSYSTEMS (STRUCTURE AND FUNCTION): Forest, Desert, Wetlands, River, Oceanic and Lake. Sustainability: 17 SDGs-History, targets, implementation, Capacity Development

Module -2

NATURAL RESOURCE MANAGEMENT

Advances in Energy Systems (Merits, Demerits, Global Status and Applications): Hydrogen, Solar, OTEC, Tidal and Wind.

Natural Resource Management (Concept and case-studies): Disaster Management, Sustainable Mining - case studies and Carbon Trading.

Module -3

ENVIRONMENTAL POLLUTION & WASTE MANAGEMENT Environmental Pollution (Sources, Impacts, Corrective and Preventive measures, Relevant Environmental Acts, Case-studies): Surface and Ground Water Pollution; Noise pollution; Soil Pollution and Air Pollution. Waste Management: Bio-medical Wastes; Solid waste; Hazardous wastes; E-wastes; Industrial and Municipal Sludge.

Module -4

Global Environmental Concerns (Concept, policies and case-studies): Ground water depletion/recharging, Climate Change; Acid Rain; Ozone Depletion; Radon and Fluoride problem in drinking water; Resettlement and rehabilitation of people, Environmental Toxicology.

Module -5

ENVIRONMENTAL LEGISLATION: Water Act 1974, Air Act 1981, Environmental Protection Act 1984, Solid Waste Management Rules-2016, E- Waste management Rule - 2022, Biomedical Waste management-2016. Environmental Impact Assessment

TEXTBOOKS:

- 1. Environmental studies, Benny Joseph, Tata Mcgraw-Hill 2nd edition 2012 \
- 2. Environmental studies, S M Prakash, pristine publishing house, Mangalore 3rd edition-2018

REFERENCE BOOKS:

- 1. Benny Joseph, Environmental studies, Tata Mcgraw-Hill 2nd edition 2009
- 2. M.Ayi Reddy Textbook of environmental science and Technology, BS publications 2007
- 3. Dr. B.S Chauhan, Environmental studies, university of science press 1st edition

VIDEO LINKS:

- 1. Weblink: https://sdgs.un.org/goals-Video Lectures
- 2. https://archive.nptel.ac.in/courses/109/105/109105190/.

4. Syllabus Timeline

| S/L | Syllabus Timeline | Description |
|-----|-------------------|--|
| 1 | Week 1-2 | Introduction to ecosystems, exploring their structure and function with a focus on sustainability and SDGs. |
| 2 | Week 3-4 | Understanding natural resource management, advances in energy systems, and disaster management through case studies. |
| 3 | Week 5-6 | Examination of environmental pollution sources, impacts, and preventive measures, along with waste management strategies. |
| 4 | Week 7-8 | Exploration of global environmental concerns such as climate change, groundwater depletion, and related policies. |
| 5 | Week 9-10 | Study of environmental legislation, including key environmental acts and the process of Environmental Impact Assessment (EIA). |
| 6 | Week 11-12 | Revision |

5. Teaching-Learning Process Strategies

| S/L | TLP Strategies: | Description |
|-----|------------------------------|--|
| 1 | Interactive Lectures: | Utilize chalk and talk along with PowerPoint presentations and animations to engage students in theoretical and practical understanding |
| 2 | Case Study Analysis: | Present real-world scenarios and case studies to help students apply theoretical knowledge to practical situations, particularly in natural resource management and pollution control. |
| 3 | Fieldwork and Site Visits | Encourage hands-on learning through field visits to environmental labs, green buildings, and treatment plants, followed by documentation and analysis of the processes observed. |
| 4 | Collaborative | Promote group projects and discussions, enabling students to collaborate and |
| | Learning | learn from each other, particularly in global environmental concerns and energy systems. |

6. Assessment Details (both CIE and SEE)

Assessment Details (both CIE and SEE)

The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 40% of the maximum marks (20 marks out of 50) and for the SEE minimum passing mark is 35% of the maximum marks (18 out of 50 marks). The student is declared as a pass in the course if he/she secures a minimum of 40% (40 marks out of 100) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together.

Continuous internal Examination (CIE)

- 1. For the Assignment component of the CIE, there are 25 marks and for the Internal Assessment Test component, there are 25 marks.
- 2. The first test will be administered after 40-50% of the syllabus has been covered, and the second test will be administered after 85-90% of the syllabus has been covered
- 3. Any two assignment methods mentioned in the regulations, if an assignment is project-based then only one assignment for the course shall be planned. The teacher should not conduct two assignments at the end of the semester if two assignments are planned.
- 4. For the course, CIE marks will be based on a scaled-down sum of two tests and other methods of assessment.

The sum of two tests, two assignments, will be out of 100 marks and will be scaled down to 50 marks.

Internal Assessment Test question paper is designed to attain the different levels of Bloom's taxonomy as per the outcome defined for the course.

Semester End Examinations (SEE)

SEE paper shall be set for **50 questions**, each of the 01 mark. **The pattern of the question paper is MCQ** (multiple choice questions). The time allotted for SEE is 01 hour. The student has to secure a minimum of 35% of the maximum marks meant for SEE. **7. Learning Objectives**

| S/L | Learning Objectives | Description |
|-----|---|--|
| 1 | Analyze the structure and function of various ecosystems. | Students will learn about the characteristics and interactions within ecosystems such as forests, deserts, wetlands, rivers, oceans, and lakes. |
| 2 | Evaluate natural resource management techniques. | Students will assess the merits and demerits of various energy systems and learn sustainable management practices through case studies. |
| 3 | Investigate environmental pollution and waste management. | Students will understand the sources and impacts of environmental pollution, along with strategies for pollution control and waste management. |
| 4 | Explore global environmental concerns and policies. | Students will study global issues like climate change and groundwater depletion, and examine the role of environmental legislation in addressing these challenges. |
| 5 | Understand environmental legislation and its application. | Students will gain insights into key environmental acts and regulations, and learn how to apply them in real-world scenarios. |

8. Course Outcomes (COs) and Mapping with POs/ PSOs Course Outcomes (COs)

| Cos | Description |
|--------------|--|
| M23BESK508.1 | Analyze the structure and functions of various ecosystems and evaluate their sustainability |
| M23BESK508.2 | Apply knowledge of natural resource management and advances in energy systems to assess their global impacts |
| M23BESK508.3 | Investigate environmental pollution sources and apply waste management strategies in realworld scenarios |
| M23BESK508.4 | Critically analyze global environmental concerns and assess the effectiveness of environmental policies |
| M23BESK508.5 | Demonstrate an understanding of environmental legislation and apply it to ensure sustainable practices |

CO-PO-PSO Mapping

| COs/POs | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |
|--------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|

10. Future with this Subject

This course provides a foundational understanding of environmental science that is crucial for advanced studies in environmental engineering, sustainability, and policy-making. It equips students with the knowledge and skills to tackle global environmental challenges and supports interdisciplinary research, making it a valuable asset for careers in environmental management, consulting, and advocacy. The insights gained from this course will also be beneficial in professional roles requiring compliance with environmental legislation and sustainable development practices.

| 5 th Semester | Non-Credit Mandatory Course(NCMC) National Service Scheme(NSS) | M23BNSK509 |
|--------------------------|--|------------|

Activities Report Evaluation by College NSS Officer at the end of every semester (3rd to 6th semester)

Course objectives:

National Service Scheme (NSS) will enable students to:

- 1. Understand the community in general in which they work.
- 2. Identify the needs and problems of the community and involve them in problem—solving.
- 3. Develop among themselves a sense of social & civic responsibility & utilize their knowledge in finding practical solutions to individual and community problems.
- 4. Develop competence required for group-living and sharing of responsibilities & gain skills in mobilizing community participation to acquire leadership qualities and democratic attitudes.
- 5. Develop capacity to meet emergencies and natural disasters & practice national integration and social harmony in general.

General Instructions-Pedagogy:

These are sample Strategies, which teachers can use to accelerate the attainment of the various course outcomes.

- 1. In addition to the traditional lecture method, different types of innovative teaching methods may be adopted so that the activities will develop students' theoretical and applied social and cultural skills.
- 2. State the need for NSS activities and its present relevance in the society and Provide real-life examples.
- 3. Support and guide the students for self-planned activities.
- 4. You will also be responsible for assigning homework, grading assignments and quizzes, and documenting students' progress in real activities in the field.
- 5. Encourage the students for group work to improve their creative and analytical skills.

Contents:

- 1. Organic farming, Indian Agriculture (Past, Present and Future)Connectivity for marketing.
- 2. Waste management–Public, Private and Govt organization, 5R's.
- 3. Setting of the information imparting club for women leading to contribution in social and economic issues.
- 4. Water conservation techniques—Role of different stakeholders—Implementation.
- 5. Preparing an action able business proposal for enhancing the village in come and approach for implementation.
- 6. Helping local schools to achieve good results and enhance their enrolment in Higher/technical/vocational education.
- 7. Developing Sustainable Water management system for rural areas and implementation approaches.
- 8. Contribution to any national level initiative of Government of India. For eg. Digital India, Skill India, Swatch Bharat, Atmanirbhar Bharath, Makein India, Mudra scheme, Skill development programs etc.
- 9. Spreading public awareness under rural out reach programs.(minimum 5 programs).
- 10. Social connect and responsibilities.
- 11. Plantation and adoption of plants. Know your plants.
- 12. Organize National integration and social harmony events/workshops/seminars.(Minimum 02 programs).
- 13. Govt.school Rejuvenation and helping them to achieve good infrastructure.

NOTE:

Student/s in individual or in a group should select any one activity in the beginning of each semester tillend of that respective semester for successful completion as per the instructions of NSS officer with the consent of HOD of the department.

At the end of every semester, activity report should be submitted for evaluation.

Distribution of Activities – Semester wise from 3rd to 6th semester.

| Sem | Topics / Activities to be Covered |
|-------------------------------------|--|
| 3 rd Sem for 25 Marks | Organic farming, Indian Agriculture (Past, Present, and Future) Connectivity for marketing. Waste management – Public, Private and Govt organization, 5R's. Setting of the information imparting club for women leading to contribution in social and economic issues. |
| 4 th Sem for 25 Marks | Water conservation techniques—Role of different stakeholders—Implementation. Preparing an actionable business proposal for enhancing the village income and approach for implementation. Helping local schools to achieve good results and enhance their enrolment in Higher/technical/ vocational education. |
| 5 th Sem for 25 Marks | Developing Sustainable Water management systems for rural areas and implementation approaches. Contribution to any national-level initiative of the Government of India. For eg. Digital India, Skill India, SwachhBharat, Atmanirbhar Bharath, MakeinIndia, Mudrascheme, Skill development programs etc. Spreading public awareness under rural out reach programs. (minimum 5 programs). Social connect and responsibilities. |
| 6 th Semfor 25 Marks | Plantation and adoption of plants. Know your plants. Organize National integration and social harmony events/workshops/seminars.(Minimum 02 programs). |

3. Govt.school Rejuvenation and helping them to achieve good infrastructure.

Course outcomes (Course Skill Set):

At the end of the course, the student will be able to:

| Cos | Description |
|--------------|---|
| M23BNSK509.1 | Understand the importance of his/her responsibilities towards society. |
| M23BNSK509.2 | Analyse the environmental and societal problems/issues and will be able to design solutions for the same. |
| M23BNSK509.3 | Evaluate the existing system and to propose practical solutions for the same for sustainable development. |
| M23BNSK509.4 | Implement government or self-driven projects effectively in the field. |
| M23BNSK509.5 | Develop capacity to meet emergencies and natural disasters & practice national integration and social harmony in general. |

Pedagogy-Guidelines

| SI No | Topic | Group size | Location | Activity execution | Reporting | Evaluation of the Topic |
|----------|---|---------------------------------|--|--|---|---|
| 1. | Organic farming, Indian Agriculture (Past, Present, and Future) Connectivity for marketing. | May be individual or team | Farmers land/ Villages/ roadside/ community area /College campus etc | Site selection / proper consultation/ Continuous monitoring/ Information board | Report should be submitted by an individual to the concerned evaluation authority | Evaluation as per the rubrics of the scheme and syllabus by NSS officer |
| 2. | Waste management— Public, Private and Govt organization,5R's. | May be individual or team | Villages/ Ci ty Areas / Grama panchayat/ public | Site selection / proper consultation/ Continuous monitoring/ Information | Report should be submitted by an individual to the | Evaluation as per the rubrics of the scheme and |

| | | | associations/ Government Schemes officers /campus etc | board | concerned evaluation authority | syllabus by NSS officer |
|----|--|---------------------------------|--|--|---|---|
| 3. | Setting of the information imparting club for women leading to contribution in social And economic issues. | May be individual or team | Women empowerment groups/ Consulting NGOs & Govt Teams / College campus etc | Group selection/ proper consultation / Continuous monitoring / Information board | Report should be submitted by an individual to the concerned evaluation authority | Evaluation as per the rubrics of the scheme and syllabus by NSS officer |
| 4. | Water conservation techniques – Role of different stakeholders– Implementation. | May be individual or team | Villages/ Ci ty Areas / Grama panchayat/ public associations/ Government Schemes officers / Campus etc | Site selection/ Proper consultation/ Continuous monitoring/ Information board | Report should be submitted by an individual to the concerned evaluation authority | Evaluation as per the rubrics of the scheme and syllabus by NSS officer |
| 5. | Preparing an actionable business proposal for enhancing the village income and approach for implementation. | May be individual or team | Villages/ Ci ty Areas / Grama panchayat/ public associations/ Government Schemes officers /campus etc | Group selection/ proper consultation / Continuous monitoring / Information board | Report should be submitted by an individual to the concerned evaluation authority | Evaluation as per the rubrics of the scheme and syllabus by NSS officer |
| 6. | Helping local schools to achieve good results and enhance their enrolment in Higher/ technical/vocational education. | May be individual or team | Villages/ City Areas / Grama panchayat/ public associations/ Government Schemesofficers /campus etc | School selection/ proper consultation / Continuous monitoring / Information board | Report should be submitted by an individual to the concerned evaluation authority | Evaluation as per the rubrics of the scheme and syllabus by NSS officer |

| 7. | Developing Sustainable Water management system for rural areas and implementation approaches. | May be individual or team | Villages/City Areas / Grama panchayat/ public associations/ Government | Site selection/ proper consultation/ Continuous monitoring / Information | Report should be submitted by an individual to the | Evaluation as per the rubrics of the scheme and syllabus by |
|-----|---|---------------------------------|--|--|---|---|
| | | | Schemes officers /campus etc | board | concerned evaluation authority | NSS officer |
| 8. | Contribution to any national-level initiative of the Government of India. For eg. Digital India, Skill India, Swachh Bharat, Atmanirbhar Bharath, Make in India, Mudrascheme, Skill development programs etc. | May be individual or team | Villages/City Areas / Grama panchayat/ public associations/ Government Schemesofficers /campus etc | Group selection/ proper consultation/ Continuous monitoring / Information board | Report should be submitted by an individual to the concerned evaluation authority | Evaluation as per the rubrics of the scheme and syllabus by NSS officer |
| 9. | Spreading public awareness under rural out reach programs.(minimum 5 programs).Social connect and responsibilities. | May be individual or team | Villages/City Areas / Grama panchayat/ public associations/ Government Schemesofficers /campus etc | Group selection/ proper consultation/ Continuous monitoring / Information board | Report should be submitted by an individual to the concerned evaluation authority | Evaluation as per the rubrics of the scheme and syllabus by NSS officer |
| 10. | Plantation and adoption of plants. Know your plants. | May be individual or team | Villages/City Areas / Grama panchayat/ public associations/ Government Schemesofficers /campus etc | Place selection/ proper consultation/ Continuous monitoring / Information board | Report should be submitted by an individual to the concerned evaluation authority | Evaluation as per the rubrics of the scheme and syllabus by NSS officer |

| 11. | Organize National integration and social harmony events /workshops /seminars.(Minimum 02 programs). | May be individual or team | Villages/City Areas / Grama panchayat/ public associations/ Government Schemes officers /campus etc | Place selection/ proper consultation/ Continuous monitoring / Information board | Report should be submitted by an individual to the concerned evaluation authority | Evaluation as per the rubrics of the scheme and syllabus by NSS officer |
|-----|---|---------------------------------|---|--|---|---|
| 12. | Govt. school Rejuvenation and helping them to achieve good infrastructure. | May be individual or team | Villages/City Areas / Grama panchayat/ public associations/ Government Schemes officers /campus etc | Place selection/ proper consultation/ Continuous monitoring / Information board | Report should be submitted by an individual to the concerned evaluation authority | Evaluation as per the rubrics of the scheme and syllabus by NSS officer |

It may differ depending on local resources available for the study as well as environment and climatic differences, location, and time of execution.

Plan of Action ((Execution of Activities For Each Semester)

| 110 | an of Action ((Execution of Activities For Each Semester) |
|-----------|--|
| Sl. No | Practice Session Description |
| 1. | Lecture session by NSS Officer |
| 2. | Students Presentation on Topics |
| 3. | Presentation-1, Selection of topic, PHASE-1 |
| 4. | Commencement of activity and its progress -PHASE-2 |
| 5. | Execution of Activity |
| 6. | Execution of Activity |
| 7. | Execution of Activity |
| 8. | Execution of Activity |
| 9. | Execution of Activity |
| 10. | Case-study-based Assessment, Individual performance |
| 11. | Sector wise study and its consolidation |
| 12. | Video-based seminar for 10-minutes by each student At the end of the semester with a Report. |
| | • In every semester from 3 rd semester to 6 th semester, Each student should do activities according to the scheme and syllabus. |
| | • At the end of every semester student performance has to be evaluated by the NSS officer for the assigned activity progress and its completion. |
| | • At last in 6 th semester consolidated report of all activities from 3 rd to 6 th semester, compiled report should be submitted as per the instructions. |
| Ass | essment Details: |

| Weightage | CIE - 100% | |
|--|---------------|--|
| Presentation-1 Selection of topic, PHASE-1 | 10 Marks | Implementation strategies of the project(NSS work). |
| Commencement of activity and its progress - PHASE-2 | 10 Marks | The last Report should be signed by the NSS Officer, the HOD, and the principal. |
| Case Study-based Assessment Individual Performance with Report | 10 Marks | At-last Report should be evaluated by the NSS officer of the institute. |
| Sector-wise study & its consolidation | 10 Marks | • Finally, the consolidated marks sheet |
| Video based seminar for 10 minutes by each student At the end of semester with Report. Activities. | 10 Marks | should be sent to the university and made available at the LIC visit. |
| Total marks for the course in each semester | 50 Marks | |

Marks scored for 50 by the students should be Scale down to 25 marks In each semester for CIE entry in the VTU portal.

25 marks CIE entry will be entered in University IA marks portal at the end of each semester 3rd to 6th sem. Report and assessment copy should be made available in the department semester wise

Students should present the progress of the activities as per the schedule in the prescribed practical session in the field.

There should be positive progress in the vertical order for the benefit of society in general.

Suggested Learning Resources:

Books:

- 1. NSS Course Manual, Published by NSS Cell, VTU Belagavi.
- 2. Government of Karnataka, NSS cell, activities reports and manual.
- 3. Government of India, NSS cell, Activities reports and manual.

| Credits | 0 | Total Marks | 100 | |

Evaluation Method: Objective type Theory / Practical / Viva-Voce

Course objectives:

- 1. To enable the student to have good Health.
- 2. To practice mental hygiene.
- 3. To possess emotional stability.
- 4. To integrate moral values.
- 5. To attain a higher level of consciousness.

The Health Benefits of Yoga

The benefits of various yoga techniques have been supposed to improve

- body flexibility,
- performance,
- stress reduction,
- attainment of inner peace, and
- self-realization.

The system has been advocated as a complementary treatment to aid the healing of several ailments such as

- coronary heart disease,
- depression,
- anxiety disorders, asthma, and
- extensive rehabilitation for disorders including musculoskeletal problems and traumatic brain injury. The system has also been suggested as behavioral therapy for smoking cessation and substance abuse (including alcohol abuse).

If you practice yoga, you may receive these physical, mental, and spiritual benefits:

- Physical
 - 1. Improved body flexibility and balance
 - 2. Improved cardiovascular endurance (stronger heart)
 - 3. Improved digestion
- 4. Improved abdominal strength
- 5. Enhanced overall muscular strength
- 6. Relaxation of muscular strains
- 7. Weight control
- 8. Increased energy levels
- 9. Enhanced immune system
- Mental
- 1. Relief of stress resulting from the control of emotions
- 2. Prevention and relief from stress-related disorders
- 3. Intellectual enhancement, leading to improved decision-making skills
- Spiritual
- 1. Life with meaning, purpose, and direction
- 2. Inner peace and tranquility
- 3. Contentment

Semester V

- Patanjali's Ashtanga Yoga its need and importance.
- Ashtanga Yoga
- 1. Asana
- 2. Pranayama
- 3. Pratyahara
- Asana its meaning by name, technique, precautionary measures and benefits of each asana
- Different types of Asanas
- **a.** Sitting 1. Ardha Ushtrasana 2. Vakrasana 3. Yogamudra in Padmasana
- **b.** Standing 1. UrdhvaHastothanasana 2. Hastapadasana 3. ParivrittaTrikonasana 4. Utkatasana

- c. Prone line 1. Padangushtha Dhanurasana 2. Poorna Bhujangasana / Rajakapotasana
- d. Supine line 1. Sarvangasana 2. Chakraasana 3. Navasana/Noukasana 4. Pavanamuktasana
- Revision of practice 60 strokes/min 3 rounds
- Meaning by name, technique, precautionary measures and benefits of each Pranayama 1. Ujjayi 2.
 Sheetali 3. Sheektari

Course outcomes (Course Skill Set):

At the end of the course, the student will be able to:

| att the end of the cours | c, the student will be usic to: |
|--------------------------|--|
| COs | Description |
| COS | Description |
| M23BYOK509.1 | Understand the meaning, aim and objectives of Yoga. |
| M23BY8K5883 | Perform Suryanamaskar and able to Teach its benefits. Understand and teach different Asanasbyname, its importance, methods and ben |
| | |
| M23BY0K509.5 | Instruct Kapalabhati and its need and importance, precautions, procedure and use |
| | |

M23BYOK509.6 Coach different types of Kriyas, method to follow and usefulness.

Assessment Details (both CIE and SEE)

- Students will be assessed with internal test by a. Multiple choice questions b. Descriptive type questions (Two internal assessment tests with 25 marks/test)
- Final test shall be conducted for whole syllabus for 50 marks.
- Continuous Internal Evaluation shall be for 100 marks (including IA test)

Suggested Learning Resources:

Books:

- 1. Yogapravesha in Kannada by Ajitkumar
- 2. Light on Yoga by BKS Iyengar
- 3. Teaching Methods for Yogic practices by Dr. M L Gharote & Dr. S K Ganguly
- 4. Yoga Instructor Course hand book published by SVYASA University, Bengaluru
- 5. Yoga for Children step by step by Yamini Muthanna

| 6 th Semester | Integrated Professional course(IPC) Full Stack Development | M23BCS601 |
|--------------------------|---|-----------|
|--------------------------|---|-----------|

1. Prerequisites

| S/L | Proficiency | Prerequisites |
|-----|---------------------------------|---|
| 1 | Basic Programming Knowledge | Python: Since Django is a Python-based framework, strong proficiency in Python is essential. You should be comfortable with Python syntax, data types, loops, functions, and object-oriented programming (OOP). |
| 2 | Front-End Development Skills | HTML/CSS: Proficiency in HTML and CSS is necessary to create the structure and style of web pages. You should understand the basics of responsive design. JavaScript: Knowledge of JavaScript is important for adding interactivity to web pages. Understanding the Document Object Model (DOM) and how to manipulate it using JavaScript is crucial. Front-End Frameworks/Libraries: Familiarity with front-end frameworks like Bootstrap for styling, or JavaScript libraries like jQuery, can be beneficial. Learning a modern front-end framework like React can also be helpful for creating dynamic user interfaces. |
| 3 | Django-Specific Knowledge | Django Framework: Proficiency in Django is key. This includes understanding Django's MVC (Model-View-Controller) architecture, working with models, views, and templates, and using Django's ORM (Object-Relational Mapping) to interact with databases. |
| 4 | Database Knowledge | SQL Databases: Understanding of SQL and how to work with databases like PostgreSQL, MySQL, or SQLite, which are commonly used with Django. You should be comfortable with designing database schemas, writing queries, and optimizing database performance. Django ORM: Proficiency in Django's ORM to perform database operations in a Pythonic way without writing raw SQL. |
| 5 | Security Practices | Django Security Features: Familiarity with Django's built-in security features, such as CSRF protection, SQL injection protection, and handling authentication securely. Web Security Basics: Understanding of HTTPS, secure password storage, user authentication and authorization, and common web vulnerabilities. |

2. Competencies

| S/L | Competency | KSA Description |
|-----|------------------------|---|
| 1 | Web Technologies | Knowledge: Frontend: HTML5, CSS3, JavaScript, frameworks like React.js, Angular, or Vue.js. Backend: Server-side languages like Node.js, Java, or Python, and frameworks (Express.js, Django). Skills: Develop responsive web applications that deliver a seamless user experience. Attitudes: Build interactive and dynamic user interfaces as well as robust serverside applications. |
| 2 | Database Management | Knowledge: Familiarity with relational databases (MySQL, PostgreSQL) and NoSQL databases (MongoDB) Skills: Write complex queries and optimize database performance. Attitudes: Design, implement, and manage databases efficiently. |
| 3 | API Development | Knowledge: Knowledge of RESTful APIs and GraphQL. Skills: Test and document APIs for usability. Attitudes: Design and implement APIs that facilitate communication between frontend and backend. |

| 4 | Responsive Web Design | Knowledge: Familiarity with responsive design principles and frameworks (e.g., Bootstrap). Skills: Use CSS techniques to ensure design consistency across devices. Attitudes: Create interfaces that adapt to various screen sizes. |
|---|--------------------------|---|
| 5 | Problem-Solving | Knowledge : Techniques for troubleshooting and debugging. Skills : Implement solutions efficiently and evaluate their effectiveness |
| | | Attitudes: Analyze complex issues and propose effective solutions. |
| 6 | Team Collaboration | Knowledge: Principles of teamwork and collaboration in software development. Skills: Communicate clearly and constructively in team settings. Attitudes: Work effectively in diverse teams and contribute to group objectives. |
| 7 | Project Development | Knowledge: Understanding the lifecycle of software development from requirements to deployment. Skills: Deliver end-to-end solutions that meet user needs. Attitudes: Integrate frontend and backend components to create cohesive applications. |

3. Syllabus

| FULLSTACK DEVELOPMENT SEMESTER – VI | | | | |
|--|-------------------------------------|-------------|-----|--|
| Course Code | M23BCS601 | CIE Marks | 50 | |
| Number of Lecture Hours/Week(L: T: P: S) | (2:2:2:0) | SEE Marks | 50 | |
| Total Number of Lecture Hours | 40 Hours Theory +20 Hours Practical | Total Marks | 100 | |
| Credits | 4 | Exam Hours | 03 | |

Course Learning Objectives:

- 1. Explain the use of learning full stack web development.
- 2. Make use of rapid application development in the design of responsive web pages.
- 3. Illustrate Models, Views and Templates with their connectivity in Django for full stack web development.
- 4. Demonstrate the use of state management and admin interfaces automation in Django.
- 5. Design and implement Django apps containing dynamic pages with SQL databases.

Module-1: MVC based Web Designing

Web framework, MVC Design Pattern, Django Evolution, Views, Mapping URL to Views, Working of Django URL Confs and Loose Coupling, Errors in Django, Wild Card patterns in URLS.

Textbook 1: Chapter 1 and Chapter 3

Module -2: Django Templates and Models

Template System Basics, Using Django Template System, Basic Template Tags and Filters, MVT Development Pattern, Template Loading, Template Inheritance, MVT Development Pattern.

Configuring Databases, Defining and Implementing Models, Basic Data Access, Adding Model String Representations, Inserting/Updating data, Selecting and deleting objects, Schema Evolution **Textbook 1: Chapter 4 and Chapter 5**

Module -3: Django Admin Interfaces and Model Forms

Activating Admin Interfaces, Using Admin Interfaces, Customizing Admin Interfaces, and Reasons to use Admin Interfaces.

Form Processing, Creating Feedback forms, Form submissions, custom validation, creating Model Forms, URLConf Ticks, and Including Other URLConfs. **Textbook 1: Chapters 6, 7 and 8**

Module -4: Generic Views and Django State Persistence

Using Generic Views, Generic Views of Objects, Extending Generic Views of objects, Extending Generic Views. MIME Types, Generating Non-HTML contents like CSV and PDF, Syndication Feed Framework, Sitemap framework, Cookies, Sessions, Users and Authentication. **Textbook 1: Chapters 9, 11 and 12**

Module -5: jQuery and AJAX Integration in Django

Ajax Solution, Java Script, XHTML HttpRequest and Response, HTML, CSS, JSON, iFrames, Settings of Java Script in Django, jQuery and Basic AJAX, jQuery AJAX Facilities, Using jQuery UI Autocomplete in Django Textbook 2: Chapters 1, 2 and 7.

Laboratory Component:

- 1. Installation of Python, Django and Visual Studio code editors can be demonstrated. Creation of virtual environment, Django project and App should be demonstrated
- 2. Develop a Django app that displays A.current date and time in server
- B. date and time four hours ahead and four hours before as an offset of current date and time in server.
- 3. Develop a simple Django app that displays an unordered list of fruits and ordered list of selected students for an event
- 4. Develop a layout.html with a suitable header (containing navigation menu) and footer with copyright and developer information. Inheritthis layout.html and create 3 additional pages: contact us, About Us and Home page

of any website.

- 5. Develop a Django app that performs student registration to a course.
- A. It should also display list of students registered for any selected course. Create students and course as models with enrolment as ManyToMany field.
- B. For student and course models created, register admin interfaces, perform migrations and illustrate data entry through admin forms.
- C..For students enrolment, create a generic class view which displays list of students and detail view that displays student details for any selected student in the list.
- 6. Develop a Model form for student that contains his topic chosen for project, languages used and duration with a model called project.
- 9.. Develop example Django app that performs CSV and PDF generation for any models created in previous laboratory component.
- 10. Develop a registration page for student enrolment as done in Program 5, but without page refresh using AJAX.
- 11. Develop a search application in Django using AJAX that displays courses enrolled by a student being searched.

Textbooks:

- 1. Adrian Holovaty, Jacob Kaplan Moss, The Definitive Guide to Django: Web Development Done Right, Second Edition, Springer-Verlag Berlin and Heidelberg GmbH & Co. KG Publishers, 2009
- 2. Jonathan Hayward, Django Java Script Integration: AJAX and j Query, First Edition, Pack Publishing, 2011 **Reference Books:**
- 1. Aidas Bendroraitis, Jake Kronika, Django 3 Web Development Cookbook, Fourth Edition, Packt Publishing,

2020

- 2. William Vincent, Django for Beginners: Build websites with Python and Django, First Edition, Amazon Digital Services, 2018
- 3. Antonio Mele, Django by Example, 3rd Edition, Pack Publishers, 2020

Weblinks and Video Lectures (e-Resources):

- 1. MVT architecture with Django: https://freevideolectures.com/course/3700/django-tutorials
- 2. Using Python in Django: https://www.youtube.com/watch?v=2BqoLiMT3Ao
- 3. Model Forms with Django: https://www.youtube.com/watch?v=gMM1rtTwKxE
- 4. Real time Interactions in Django: https://www.youtube.com/watch?v=3gHmfoeZ45k
- 5. AJAX with Diango for beginners: https://www.youtube.com/watch?v=3VaKNyjlxAU

Activity Based Learning (Suggested Activities in Class)/ Practical Based learning

1. Real world problem solving - applying the Django framework concepts and its integration with AJAX to develop any shopping website with admin and user dashboards.

4. Syllabus Timeline

| 4. | . Syllabus Timeline | | | |
|-----|--|--|--|--|
| S/L | Syllabus Timeline | Description | | |
| 1 | Week 1: MVC based Web Designing | Understand the concept of MVC and MVT architecture, Evolution of Django, views, working of Django URL confs and Loose coupling. Understand how to install python, Django and visual studio code and how to create virtual environment and develop a Django app that display current date and time with different scenarios | | |
| 2 | Week 2: Django Templates | Creating HTML templates, Using Django's template language for dynamic content, Template inheritance and context rendering. Develop a simple Django app of order and unorder list of fruits and students for an event and also develop an app for layout.html | | |
| 3 | Week 3-4: Models | Defining Django models and fields, Performing database migrations. Introduction to Django's ORM (Object-Relational Mapping),understanding concept of inserting, updating ,selecting and deleting the data in database Develop a Django app that performs student registration to a course. It should also display list of students registered for any selected course. Create students and course as models with enrolment as Many ToMany field. | | |
| 4 | Week 5-6: Django Admin Interfaces | Understand the concept of admin interface and how to use, active and customizing admin interface. For student and course models, register admin interfaces, perform migrations and illustrate data entry through admin forms. | | |
| 5 | Week 7-8: | Creating and handling forms in Django and understand how to create a | | |
| | Model Forms | feedback form, model forms. Develop a Model form for student that contains his topic chosen for project, languages used and duration with a model called project | | |
| 6 | Week 9-10: Generic Views | Definition of generic views, extending generic views of object, different types of generic view. Understanding the concept of generating non-HTML contents like CSV and PDF. For student's enrolment, create a generic class view which displays list of students and detail view that displays student details for any selected student in the list. Develop example Django app that performs CSV and PDF generation for any models created in previous laboratory component. | | |
| 7 | Week 11-12: jQuery and Integration in Django AJAX | Understand the concept of HTML request and Response, j Query, Ajax solution, CSS, JSON with code snippet Develop a registration page for student enrolment but without page refresh using AJAX. Develop a search application in Django using AJAX that displays courses enrolled by a student being searched. | | |

5. Teaching-Learning Process Strategies

| | | 8 |
|-----|-----------------|-------------|
| | | |
| CIT | TI D C4 4 2 | D |
| S/L | TLP Strategies: | Description |

| 1 | Interactive Lectures and Demos | Use interactive lectures to introduce new concepts, supported by live coding sessions where the instructor demonstrates how to implement these concepts in real-time. For example, while teaching Django models, the instructor can create models in a live coding session and show how they translate into database tables. |
|---|---|---|
| 2 | Hands-on Labs and Coding Exercises | Incorporate regular lab sessions where students work on coding exercises that apply the concepts taught in lectures. After learning about Django views and templates, assign exercises where students create their own views and templates for a small web application. |
| 3 | Project-Based Learning | Use a project-based learning approach where students build a full stack application over the course duration, integrating all aspects of development (front-end, backend, database, and deployment). Start with smaller individual projects (e.g., a simple blog), leading up to a capstone project where students create a more complex application, such as an e-commerce site. |
| 4 | Collaborative Learning and Pair Programming | Encourage collaborative learning through pair programming and group projects, where students can work together to solve problems. Assign pair programming tasks, such as creating RESTful APIs or implementing authentication, and group projects where teams build different modules of a larger application. |
| 5 | Flipped Classroom Approach | Implement a flipped classroom model, where students study theoretical concepts through online resources (videos, articles) before class, and class time is dedicated to discussions, Q&A, and practical exercises. Assign pre-class videos on Django's ORM, and use class time to discuss advanced queries and perform hands-on exercises. |
| 6 | Continuous Assessment and Feedback | Use formative assessments (quizzes, coding challenges) and provide regular feedback to monitor student progress and address learning gaps. After each module, conduct a quiz or a coding challenge to assess understanding. Provide detailed feedback on code quality, efficiency, and best practices. |
| 7 | Use of Real-World Case Studies | Integrate real-world case studies into the curriculum to demonstrate how full stack development is applied in various industries. Analyze a case study of a successful web application, discussing the technologies used, the architecture, and the challenges faced during development. |
| 8 | Guest Lectures and Industry Interaction | Invite industry professionals to give guest lectures or hold Q&A sessions to provide insights into the latest trends and best practices in full stack development. Arrange guest lectures on topics like cloud deployment, scalability, or emerging technologies in full stack development. |
| 9 | Supplementary Resources and Self- Learning | Provide supplementary resources like online tutorials, documentation, and recommended reading to encourage self-learning and deeper exploration of topics. Share resources on advanced Django topics, front-end frameworks, or best practices in web security, encouraging students to explore these on their own. |

6. Assessment Details (both CIE and SEE)

The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 40% of the maximum marks (20 marks out of 50). A student shall be deemed to have satisfied the academic requirements and earned the credits allotted to each subject/course if the student secures not less than 35% (18 Marks out of 50) in the semester-end examination (SEE), and a minimum of 40% (40 marks out of 100) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together

Theory Course with 4 credits: Integrated Professional Core Course (IPC)

| ſ | | | | | | |
|---|------------|--------|-----------|------------|------------|--|
| | Components | Number | Weightage | Max. Marks | Min. Marks | |

| | Internal Assessment-Tests (A) | 2 | 60% | 15 | 06 |
|---------------|---------------------------------|------------|-----------|------------|------------|
| Theory (A) | Assignments/Quiz/Activity (B) | 2 | 40% | 10 | 04 |
| | Total Marks | | 100% | 25 | 10 |
| | Components | Number | Weightage | Max. Marks | Min. Marks |
| | Record Writing | Continuous | 60% | 15 | 06 |
| Laboratory(B) | Test at the end of the semester | 1 | 40% | 10 | 04 |
| | Total Marks | | 100% | 25 | 10 |

Final CIE Marks = (A) + (B) Semester

End Examination pattern:

- 1. Question paper pattern will be ten questions. Each question is set for 20 marks. The medium of the question paper shall be English unless otherwise it is mentioned.
- 2. There shall be 2 question from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have mix of topics under that module if necessary.
- 3. The students have to answer 5 full questions selecting one full question from each module.
- 4. The question paper may include at least one question from the laboratory component.
- 5. Marks scored will be proportionally scaled down to 50 marks

7. Learning Objectives

| S/L | Learning Objectives | Description |
|-----|---|---|
| 1 | Master Core Python Programming Skills | Develop a solid understanding of Python programming, including advanced concepts such as object-oriented programming, file handling, and libraries. |
| 2 | Understand and Apply Django Framework | Gain in-depth knowledge of Django's MVC (Model-View-Controller) architecture and how it facilitates web development. |
| 3 | Develop Database Management Skills | Learn how to design, implement, and manage databases using Django's ORM and SQL. |
| 4 | Build and Style User Interfaces | Acquire skills in front-end technologies like HTML, CSS, and Java Script to create responsive and interactive user interfaces. |
| 5 | Implement Security Best Practices | Learn how to secure web applications using Django's built-in security features and web security best practices. |
| 6 | Integrate Front-End Frameworks with Django | Learn how to integrate modern front-end frameworks (e.g., React, Vue.js) with Django for building dynamic, single-page applications |
| 7 | Test and Debug Django Applications | Understand the importance of testing and debugging, and learn how to write and run tests in Django |

8. Course Outcomes (COs) and Mapping with POs/ PSOs Course Outcomes (COs)

| COs | Description |
|-------------|--|
| M23BCS601.1 | Describe the working of MVT based full stack web development with Django. |
| M23BCS601.2 | Apply the Django framework libraries to render non HTML contents like CSV and PDF. |
| M23BCS601.3 | Analyse therole of Template Inheritance and Generic views for developing full stack web applications |

| M23BCS601.4 | Designing of Models and Forms for rapid development of web pages and Perform jQuery based AJAX integration to Django Apps to build responsive full stack web applications. |
|-------------|--|
| M23BCS601.5 | Demonstrate the ability to design and develop python programs by using various Django frameworks and document the result. |

CO-PO-PSO Mapping

| COs/POs | PO1 | PO2 | | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 | PSO1 | PSO2 |
|-------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|------|------|

| M23BCS601.5 | 3 | 3 | 3 | - | 3 | - | - | - | - | - | - | 2 | 3 | 3 |
| M23BCS601 | 3 | 3 | 2.3 | - | 2.5 | - | - | - | - | - | - | 2 | 2.33 | 2.33 |

9. Assessment Plan

Continuous Internal Evaluation (CIE)

| | CO1 | CO2 | CO3 | CO4 | CO5 | Total |
|----------|-----|-----|-----|-----|-----|-------|
| Module 1 | 10 | | | | | 10 |
| Module 2 | | 4 | 6 | | | 10 |
| Module 3 | | 10 | | | | 10 |
| Module 4 | | | 5 | 5 | | 10 |
| Module 5 | | | | | 10 | 10 |
| Total | 10 | 14 | 10 | 5 | 10 | 50 |

Semester End Examination (SEE)

| | CO1 | CO2 | CO3 | CO4 | CO5 | Total |
|----------|-----|-----|-----|-----|-----|-------|
| Module 1 | 20 | | | | | 20 |
| Module 2 | | 8 | 12 | | | 20 |
| Module 3 | | 20 | | | | 20 |
| Module 4 | | | 10 | 10 | | 20 |
| Module 5 | | | | | 20 | 20 |
| Total | 20 | 28 | 22 | 10 | 20 | 100 |

Conditions for SEE Paper Setting:

Each module of SEE question paper should be allocated with questions for 20% of the total SEE marks. 10.

Future with this Subject

- 1. Continued Popularity and Growth
 - Widespread Adoption: Django will continue to be a popular choice for developers due to its robustness, ease of use, and the large number of built-in features that simplify complex tasks.
 - Community and Ecosystem: The Django community is active and growing, with ongoing development of new features, libraries, and extensions, ensuring that Django remains relevant and up-to-date.
- 2. Enhanced Performance and Scalability

- Machine Learning and AI: Integration with machine learning libraries and AI tools will become
 more prevalent, allowing developers to incorporate intelligent features into their Django
 applications.
- Blockchain: Django could be used to develop applications that interact with blockchain technologies, providing secure and decentralized solutions.

3. Advanced Front-End Integration

- Single-Page Applications (SPAs): Django will increasingly integrate with modern front-end frameworks like React, Vue.js, and Angular to build dynamic SPAs, improving user experience and application responsiveness.
- Progressive Web Apps (PWAs): Django's ability to support PWAs will allow developers to create applications that work seamlessly across different platforms and devices, offering an applike experience in the browser.

4. Enhanced Security Features

- Built-In Security Enhancements: As security threats evolve, Django will continue to strengthen its security features to protect against new vulnerabilities and ensure secure web application development.
- Compliance: Django will support compliance with various data protection regulations and standards, making it easier for developers to build applications that meet legal requirements

5. Growing Job Market and Career Opportunities

- Increased Demand: The demand for full stack developers skilled in Django will likely continue to grow, driven by the need for robust web applications across various industries.
- Career Specialization: Developers with expertise in Django will have opportunities to specialize
 in areas such as enterprise application development, e-commerce solutions, and data-driven
 applications.

6. Cloud and DevOps Integration

- Cloud-Native Development: Django applications will increasingly be designed for cloud environments, leveraging cloud services for scalability, storage, and computing power.
- DevOps Practices: Integration with DevOps practices will streamline the development, deployment, and maintenance of Django applications, promoting continuous integration and continuous deployment (CI/CD) workflows.

| 6thSemester | Professional Core Course (PC) Machine Learning | M23BCS602 |
|-------------|---|-----------|
|-------------|---|-----------|

1. Prerequisites

| 1. | Prerequisites | |
|-----|---|--|
| S/L | Proficiency | Prerequisites |
| 1. | Basic Mathematics | Good understanding of calculus (derivatives, integrals, optimization). Familiarity with probability and statistics (probability distributions, hypothesis testing). |
| 2. | Programming | Proficiency in at least one programming language commonly used for machine learning (Python, R). Experience with data structures and algorithms. |
| | | Basic understanding of software engineering principles (code organization, debugging). |
| 3. | Basic Understanding of Data Structures | • Concepts of arrays, lists, trees, and basic algorithms for sorting and searching. |
| 4. | Foundation in linear algebra | Knowledge of matrices, vectors, eigenvalues, gradients, and optimization. |

2. Competencies

| S/L | Competency | KSA Description | | | |
|-----|-------------------------------------|--|--|--|--|
| 1 | Data Exploration and Preparation | Knowledge: Understanding various data types, data quality issues, and data preprocessing techniques. Skills: Ability to clean, transform, and prepare data for machine learning algorithms. Attitudes: Appreciation for the importance of high-quality data. | | | |
| 2 | Supervised Learning Algorithms | Knowledge: Understanding the principles of supervised learning, including regression and classification algorithms (linear regression, logistic regression, decision trees, support vector machines). Skills: Ability to apply, evaluate, and tune these algorithms. Attitudes: Critical thinking in model selection and evaluation. | | | |

| 3 | Unsupervised Learning and Dimensionality Reduction | Knowledge: Understanding clustering and dimensionality reduction techniques (k-means, PCA). Skills: Ability to apply these methods for data exploration and feature engineering. Attitudes: Openness to exploring data patterns and reducing data complexity. |
|---|--|---|
| 4 | Model Evaluation and Selection | Knowledge: Understanding metrics for evaluating model performance (accuracy, precision, recall, F1-score, ROC curves). Skills: Ability to compare models, perform cross-validation, and select the best model for a given task. Attitudes: Objectivity in model assessment. |
| 5 | Ethical Considerations in Machine Learning | Knowledge: Awareness of ethical implications, bias in data, and fairness considerations. Skills: Ability to identify and mitigate bias in machine learning models. Attitudes: Responsibility and a commitment to ethical AI practices. |

3. Syllabus

| Machine Learning SEMESTER – VI | | | | | | | | |
|--|-----------|-------------|-----|--|--|--|--|--|
| Course Code | M23BCS602 | CIE Marks | 50 | | | | | |
| Number of Lecture Hours/Week(L: T: P: S) | (3:2:0:0) | SEE Marks | 50 | | | | | |
| Total Number of Lecture Hours | 50 Hours | Total Marks | 100 | | | | | |
| Credits | 04 | Exam Hours | 03 | | | | | |

Course Objectives:

- 1. Introduce the fundamental concepts and principles of machine learning.
- 2. Provide hands-on experience with commonly used machine learning algorithms.
- 3. Develop skills in data preprocessing, feature engineering, model building, evaluation, and selection.
- 4. Foster critical thinking about the ethical implications of machine learning.
- 5. Prepare students to apply machine learning techniques to real-world problems.

Module -1 (10 hours)

Machine Learning and Data Essentials

Introduction to Machine Learning, Machine Learning Explained, Machine Learning in Relation to Other Fields, Types of Machine Learning, Challenges of Machine Learning, Machine Learning Process, Machine Learning Applications, What is Data?, Big Data Analytics and Types of Analytics, Big Data Analysis Framework. Chapter 1 (All Sections), Chapter 2 (Sections 2.1, 2.2, 2.3)

Module -2 (10 hours)

Data Analysis and Learning Foundations.

Descriptive Statistics, Univariate Data Analysis and Visualization, Bivariate Data and Multivariate Data, Essential Mathematics for Multivariate Data, Introduction to Learning and its Types. Chapter 2 (Sections 2.4, 2.5, 2.6, 2.7, 2.8), Chapter 3 (Section 3.1)

Module -3 (10 hours)

Regression and Supervised Learning

Introduction to Computation Learning Theory, Design of a Learning System, Introduction to Concept Learning, Induction Biases, Modeling in Machine Learning, Learning Frameworks, Introduction to Regression, Introduction to Linearity, Correlation, and Causation, Introduction to Linear Regression, Validation of Regression Methods.

Chapter 3 (Sections 3.2, 3.3, 3.4, 3.5, 3.6, 3.7), Chapter 5 (Sections 5.1, 5.2, 5.3, 5.4)

Module -4 (10 hours)

Advanced Supervised Learning and Bayesian Principles

Multiple Linear Regression, Polynomial Regression, Logistic Regression, Ridge, Lasso, and Elastic Net Regression, Introduction to Decision Tree Learning Model, Decision Tree Induction Algorithms, Introduction to Probability-based Learning, Fundamentals of Bayes Theorem, Classification Using Bayes Model, Introduction to Ensemble Learning, Ensembling Techniques, Parallel Ensemble Models.

Chapter 5 (Sections 5.5, 5.6, 5.7, 5.8), Chapter 6 (Sections 6.1, 6.2), Chapter 8 (Sections 8.1, 8.2, 8.3), Chapter 12 (Sections 12.1, 12.2).

Module -5 (10 hours)

Unsupervised Learning, Reinforcement Learning, and Beyond

Introduction to Clustering Approaches, Proximity Measures, Hierarchical Clustering Algorithms, Partitional Clustering Algorithm, Overview of Reinforcement Learning, Scope of Reinforcement Learning, Reinforcement Learning As Machine Learning, Probabilistic Graphical Models, Artificial Neural Networks, Support Vector Machines, Genetic Algorithms, Deep Learning.

Chapter 13 (Sections 13.1, 13.2, 13.3, 13.4), Chapter 14 (Sections 14.1, 14.2, 14.3), Overview of Chapters 9, 10, 11, 15, 16.

4. Syllabus Timeline

| S/L | Syllabus Timeline | Description |
|-----|-------------------|---|
| 1 | Week 1-2: | Introduction to ML, Types of Learning, Applications, Data Types, Descriptive Statistics, Visualization (Modules 1 & 2, introductory portions) |
| 2 | Week 3-4: | Regression Analysis: Linear, Multiple Linear, Polynomial, Model Evaluation (Module 3) |
| 3 | Week 5-6: | Classification with Logistic Regression, Regularization, Bias-Variance Tradeoff |
| | | (Module 3 & 4 - introductory part) |
| 4 | Week 7-8: | Decision Trees, Ensemble Methods (Bagging, Random Forests), Evaluating Classifiers (Module 4) |
| 5 | Week 9-10: | Unsupervised Learning: Clustering (k-means), Dimensionality Reduction (PCA), Applications (Module 5) |

| | 6 | Week11-12: | Reinforcement Learning Fundamentals, Applications, Introduction to Advanced Topics: Probabilistic Graphical Models, Neural Networks, Support Vector |
|---|---|------------|---|
| ı | | | Machines, Genetic Algorithms, Deep Learning (Module 5 & Overviews) |

5. Teaching-Learning Process Strategies

| S/L | TLP Strategies: | Description |
|-----|--------------------------|--|
| 1 | Lecture Method | Deliver core concepts and foundational knowledge, interactive discussions. |
| 2 | Code Demonstrations | In-class coding examples using Python and relevant ML libraries (like scikitlearn) to illustrate algorithm implementation and data analysis techniques. |
| 3 | Project-Based Leaming | Hands-on projects where students apply ML to datasets and solve real-world inspired problems. |
| 4 | Case Studies | Analyze real-world applications of machine learning to understand its impact and challenges. |
| 5 | Group Discussions | Facilitate critical thinking and encourage collaborative learning through discussions on ethical considerations, future trends, and current events in AI/ML. |
| 6 | Guest Lectures | Invite industry experts to provide insights into practical applications and career paths in Machine Learning. |

6. Assessment Details (both CIE and SEE) Continuous Internal Evaluation:

The minimum CIE marks requirement is 40% of maximum marks in each component. \mbox{CIE}

Split up

| | Components | Number Weightage | | Max. Marks | Min. Marks |
|------|-------------------------------|------------------|-----|------------|---------------|
| (i) | Internal Assessment-Tests (A) | 2 | 50% | 25 | 10 |
| (ii) | Assignments/Quiz/Activity (B) | 2 | 50% | 25 | 10 |
| | Total M | Iarks | | 50 | 20 |

Final CIE Marks = (A) + (B) Average

internal assessment shall be the average of the 2 test marks conducted.

Semester End Examination:

- 1. Question paper pattern will beten questions. Each question is set for 20 marks. The medium of the question paper shall be English unless otherwise it is mentioned.
- 2. There shall be 2 question from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have mix of topics under that module if necessary.
- 3. The students have to answer 5 full questions selecting one full question from each module.
- 4. Marks scored will be proportionally scaled down to 50 mark

7. Learning Objectives

| S/L | Learning Objectives | Description |
|-----|---|--|
| 1 | Data Understanding and Preparation for Machine Learning | Comprehend data types, data quality issues, and learn data preprocessing techniques for effective machine learning. |
| 2 | Supervised Learning Concepts and Algorithms | Understand the principles of supervised learning, including regression and classification algorithms. Be able to apply, evaluate, and tune these algorithms for predictive modeling. |

| 3 | Unsupervised Learning Techniques | Grasp the concepts of clustering, dimensionality reduction, and their applications in data exploration and feature engineering. Be able to apply common methods like k-means and PCA. |
|---|---|---|
| 4 | Model Evaluation, Selection, and Performance Metrics | Learn various metrics for evaluating model performance and be able to compare and select the best model for a given task using techniques like cross-validation. |
| | | |
| 5 | Ethical Implications and Applications of Machine Learning | Develop an understanding of the ethical implications of machine learning, including bias in data, fairness considerations, and responsible AI development practices. |

8. Course Outcomes (COs) and Mapping with POs/ PSOs

Course Outcomes (COs)

| Course Outcom | () |
|---------------|--|
| COs | Description |
| M23BCS602.1 | Understand the fundamental concepts of machine learning, its types, applications, and the ethical implications of its use. |
| M23BCS602.2 | Apply data preprocessing techniques and perform exploratory data analysis to prepare data for machine learning algorithms. |
| M23BCS602.3 | Implement unsupervised learning techniques for clustering and dimensionality reduction. |
| M23BCS602.4 | Build, evaluate, and compare supervised learning models for regression and classification tasks. |
| M23BCS602.5 | Analyze and interpret the results of machine learning models and communicate findings effectively. |

CO-PO-PSO Mapping

10. Future with this Subject:

- 1. **Deep Learning Specialization:** The knowledge gained here primes you to explore the fascinating world of deep learning (CNNs, RNNs, Transformers). Imagine designing algorithms for self-driving cars, medical image analysis, or even writing creative text—all made possible with deep learning and highly relevant to your future careers
- 2. **MLOps (Machine Learning Operations):** Building ML models is just the start. MLOps focuses on deploying, managing, and scaling those models to real-world applications, a crucial skill for ML engineers and data scientists.

- 3. **Explainable AI (XAI):** As AI makes more decisions, understanding why becomes paramount. XAI techniques, which focus on interpreting model behavior, are essential for building trust and ensuring ethical AI development, especially in sensitive fields like healthcare and finance.
- 4. **Edge Computing and IoT:** The future is interconnected. By integrating ML with edge devices and the Internet of Things (IoT), you can create intelligent systems that react in real-time from smart homes and factories to autonomous vehicles, creating massive career opportunities in the process.
- 5. **Reinforcement Learning Applications:** Imagine teaching robots to learn like humans. Reinforcement learning makes this possible and is poised to revolutionize fields like robotics, control systems, and personalized learning experiences.
- 6. **Generative AI:** This rapidly advancing field uses models like GANs and diffusion models to create stunningly realistic images, videos, and even music, blurring the lines between human and machine creativity and opening exciting career paths for those with the right ML skills.

| 1 6 th Semester 1 | Elective-II (PE) TECHNOLOGY M23BCS603A |
|------------------------------|--|
|------------------------------|--|

1. Prerequisites

| S/L | Proficiency | Prerequisites |
|-----|--------------------------------------|---|
| 1 | Basic Programming Skills | Understanding of programming concepts and knowledge of languages like Python, JavaScript, or C++ is essential. |
| 2 | Data Structures | Familiarity with data structures such as linked lists, hash maps, and graphs is crucial. |
| 3 | Basic Knowledge of Computer Security | A good grasp of cryptographic principles is important for securing blockchain transactions. |
| 4 | Distributed Systems and Networking | Understanding how distributed systems work and the basics of networking can help grasp how blockchain nodes communicate and maintain consensus. |
| 5 | Basic Knowledge of Economics | Since blockchain often intersects with cryptocurrencies, having a basic understanding of economic principles can be beneficial. |

2. Competencies

| S/L | Competency | KSA Description | | | |
|-------------------|---|---|--|--|--|
| 1 | Blockchain Fundamentals | Knowledge: Understand the basic concepts of blockchain, including its architecture, how it works, and its various applications. Skills: Explain blockchain concepts clearly and apply them in practical scenarios. Attitudes: Curiosity and eagerness to explore new technologies and their potential impacts. | | | |
| 2 | Decentralized system & Cryptography | Knowledge: Familiarity with decentralized networking and cryptographic principles such s public-key cryptography, cryptographic hashing, and digital signatures. kills: Implement cryptographic algorithms like Secret Key Cryptography (SKC), Public Ley Cryptography (PKC) & Hash Functions. kititudes: Attention to detail and a strong focus on security and privacy. | | | |
| 3 | Basic Knowledge of Cryptocurrency | Knowledge: Understand the basic principles of Bitcoin, including its creation, blockchain technology, mining process, and transaction mechanisms. Familiarity with various alternative cryptocurrencies like Ethereum, Litecoin Ripple, and others, including their unique features and use cases. Skills: | | | |
| 4 Smart Contracts | | Knowledge: Understanding of smart contracts, particularly on platforms like Ethereum, and how they automate and enforce agreements. Skills: Proficiency in writing and deploying smart contracts using languages like python. Attitudes: Precision and thoroughness in coding to ensure accuracy and reliability. | | | |

2023Scheme - 5th to 6th Sem Competency Based Syllabi for B.E in CS(DS)

| 5 | Understanding Different Blockchains | Knowledge: Understanding of non-Cryptocurrency Applications like supply chain management, IoT and others. Skills: Proficiency in blockchain fundamentals. Attitudes: Willingness to adapt to the rapidly changing landscape of blockchain. |
|---|---|--|
|---|---|--|

3. Syllabus

| BLOCKCHAIN TECHNOLOGY SEMESTER – VI | | | | |
|---|------------|-------------|-----|--|
| Course Code | M23BCS603A | CIE Marks | 50 | |
| Number of Lecture Hours/Week (L: T: P: S) | (3:0:0:0) | SEE Marks | 50 | |
| Total Number of Lecture Hours | 40 Hours | Total Marks | 100 | |
| Credits | 03 | Exam Hours | 03 | |

Course objectives: This course will enable students to:

- 1. Define and explain the fundamentals of Blockchain
- 2.Illustrate the technologies of blockchain
- 3.Describe the models of blockchain
- 4. Analyze and demonstrate the Ethereum

Module -1

Blockchain 101: Distributed systems, History of blockchain, Introduction to blockchain, Types of blockchain, CAP theorem and blockchain, Benefits and limitations of blockchain.

Text Book 1: Chapter 1

Module -2

Decentralization and Cryptography: Decentralization using blockchain, Methods of decentralization, Routes to decentralization, Decentralized organizations. Cryptography and Technical Foundations: Cryptographic primitives, Asymmetric cryptography, Public and private keys

Text Book 1: Chapter 2, Chapter 4

Module -3

Bitcoin

Bitcoin, Transactions, Blockchain, Bitcoin payments. Theoretical foundations, Bitcoin limitations, Namecoin, Litecoin, Primecoin, Zcash

Text Book 1: Chapter 5, Chapter 6, Chapter 8

Module -4

Smart Contracts and Ethereum 101:

Smart Contracts: Definition, Ricardian contracts. Ethereum 101: Introduction, Ethereum blockchain, Elements of the Ethereum blockchain, Precompiled contracts. **Text Book 1: Chapter 9, Chapter 10**

Module -5

Alternative Blockchains: Blockchains

Blockchain-Outside of Currencies: Internet of Things, Government, Health, Finance, Media Text

Book 1: Chapter 17

Text Books:

- 1. Mastering Blockchain Distributed ledgers, decentralization and smart contracts explained, Imran Bashir, Packt Publishing Ltd, Second Edition, ISBN 978-1-78712-544-5, 2017
- 2. Bitcoin and Cryptocurrency Technologies, Arvind Narayanan, Joseph Bonneau, Edward Felten, 2016 **Reference Books:**
 - 1.Blockchain Basics: ANon-Technical Introduction in 25 Steps, Daniel Drescher, Apress, First Edition, 2017 2.Mastering Bitcoin: Unlocking Digital Cryptocurrencies, Andreas M. Antonopoulos, O'Reilly Media, First Edition, 2014.

4. Syllabus Timeline

| S/L | 4. Syllabus Timeline Syllabus Timeline | Description |
|-----|---|---|
| | 7 | |
| 1 | Week 1-2: Blockchain 101 | Competency: Blockchain Fundamentals Knowledge: Understand the basic concepts of blockchain, including its architecture, how it works, and its various applications. Skills: Explain blockchain concepts clearly and apply them in practical scenarios. |
| 2 | Week 3-4: Decentralization and Cryptography | Competency: Decentralized system & Cryptography Knowledge: Familiarity with decentralized networking and cryptographic principles such as public-key cryptography, cryptographic hashing, and digital signatures. Skills: Implement cryptographic algorithms like Secret Key Cryptography (SKC), Public Key Cryptography (PKC) & Hash Functions. |
| 3 | Week 5-6: Bitcoin and Alternative Coins | Competency: Basic Knowledge of cryptocurrency Knowledge: Understand the basic principles of Bitcoin, including its creation, blockchain technology, mining process, and transaction mechanisms. Familiarity with various alternative cryptocurrencies like Ethereum, Litecoin, Ripple, and others, including their unique features and use cases. Skills: Proficiency in programming languages such as Python, Solidity, and JavaScript for developing blockchain applications and smart contracts. Understanding and implementing security measures to protect digital wallets, private keys, and transactions from potential threats. |
| 4 | Week 7-8: Smart Contracts and Ethereum 101 | Competency: Smart Contracts Knowledge: Understanding of smart contracts, particularly on platforms like Ethereum, and how they automate and enforce agreements. Skills: Writing and deploying smart contracts using languages like python. |
| 5 | Week 9-10: Alternative Blockchains | Competency: Understanding Different Blockchains Knowledge: Understanding of non-Cryptocurrency Applications like supply chain management, IoT and others. Skills: Proficiency in blockchain fundamentals. |

| S/L | TLP Strategies: | Description |
|-----|---|---|
| 1 | Lecture Method | Utilize various teaching methods within the lecture format to reinforce competencies. |
| 2 | Video/Animation | • Incorporate visual aids like videos/animations to enhance understanding of the concepts. |
| 3 | Collaborative Learning | Encourage collaborative learning for improved competency application. |
| 4 | Higher Order Thinking (HOTS) Questions: | Pose HOTS questions to stimulate critical thinking related to each competency. |
| 5 | Problem-Based Learning (PBL) | Implement PBL to enhance analytical skills and practical application of competencies |
| 6 | Multiple Representations | Introduce topics in various representations to reinforce competencies |
| 7 | Real-World Application | Discuss practical applications to connect theoretical concepts with real-world competencies. |
| 8 | Flipped Class Technique | • Utilize a flipped class approach, providing materials before class to facilitate deeper understanding of competencies |
| 9 | Programming Assignments | Assign programming tasks to reinforce practical skills associated with competencies. |

6. Assessment Details (both CIE and SEE)

The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 40% of the maximum marks (20 marks out of 50). A student shall be deemed to have satisfied the academic requirements and earned the credits allotted to each subject/ course if the student secures not less than 35% (18 Marks out of 50) in the semester-end examination (SEE), and a minimum of 40% (40 marks out of 100) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together **Continuous Internal Evaluation:**

| Components | | Number | Weightage | Max. Marks | Min. Marks |
|------------|------------------------------------|--------|-----------|------------|------------|
| (i) | Internal Assessment-Tests (A) | 2 | 50% | 25 | 10 |
| (ii) | (ii) Assignments/Quiz/Activity (B) | | 50% | 25 | 10 |
| | Total Marks | | | 50 | 20 |

Final CIE Marks = (A) + (B)

Average internal assessment shall be the average of the 2 test marks conducted.

CIE methods /question paper is designed to attain the different levels of Bloom's taxonomy as per the outcome defined for the course.

Semester End Examination:

Theory SEE will be conducted as per the scheduled timetable, with common question papers for the subject (duration 03 hours)

- 1. Question paper pattern will be ten questions. Each question is set for 20 marks. The medium of the question paper shall be English unless otherwise it is mentioned.
- 2. There shall be 2 question from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have mix of topics under that module if necessary.
- 3. The students have to answer 5 full questions selecting one full question from each module.
- 4. Marks scored will be proportionally scaled down to 50 marks

7. Learning Objectives

| S/L | Learning Objectives | Description |
|-----|--|--|
| 1 | Understanding Blockchain Technology Fundamentals | Students will grasp the fundamental concepts of blockchain and it's decentralized way of function, including smart contracts, cryptocurrencies, non-crypto blockchains |
| 2 | Developing blockchain applications | Students will learn to develop and implement blockchain applications, smart contracts and for real world scenarios using programming languages like python. |
| 3 | Project-Based Learning | Through hands-on projects, students will apply their knowledge of blockchain to design, develop and implement blockchain applications, reinforcing their understanding of theoretical concepts |
| 4 | Collaboration and Communication Skills | Students will work collaboratively in teams on design projects, enhancing their ability to communicate effectively, share ideas, and solve problems collectively. |
| 5 | Ethical and Professional Responsibility | Students will understand the ethical and professional responsibilities associated with blockchain technology, including transparency and compliance with regulations, cautious and strategic approach to managing risks associated with cryptocurency investments and trading, best practices for securing blockchain networks and applications. |

8. Course Outcomes (COs) and Mapping with POs/ PSOs Course Outcomes (COs)

| COs | Description | |
|--------------|--|--|
| M23BCS603A.1 | Explain fundamentals of blockchain and how it works. | |
| M23BCS603A.2 | mplement security measures through cryptographic principles. | |
| M23BCS603A3 | Describe fundamentals of cryptocurrencies and their role in economics. | |
| M23BCS603AA | S603A.4 Analyse and demonstrate the Ethereum. | |
| M23BCS603A.5 | Analyse and demonstrate Hyperledger fabric. | |

CO-PO-PSO Mapping

Conditions for SEE Paper Setting:

Each module of SEE question paper should be allocated with questions for 20% of the total SEE marks

10. Future with this Subject

The "Blockchain Technology" course in the seventh semester of the B.E program lays a strong foundation for several future opportunities in the industry. The contributions of this subject extend across various areas, enhancing the students' understanding and skills in the field of Blockchain and Cryptocurrencies. Here are some notable contributions:

- Enhanced Security and Transparency: Blockchain's decentralized nature ensures that data is secure and transparent, reducing the risk of fraud and tampering. In supply chain management, companies are using blockchain to track the journey of products from origin to consumer, ensuring authenticity and reducing counterfeiting.
- **Decentralized Finance (DeFi):** DeFi platforms are revolutionizing traditional financial systems by providing decentralized financial services without intermediaries.
- Integration with Emerging Technologies: Blockchain is being integrated with other emerging technologies like Artificial Intelligence (AI) and the Internet of Things (IoT) to create innovative solutions.
- Enterprise Adoption: More enterprises are adopting blockchain technology to improve efficiency, reduce costs, and enhance security. Companies like Walmart and Maersk are using blockchain for supply chain management, while financial institutions are exploring blockchain for secure and transparent transactions.
- Regulatory Developments: As blockchain technology matures, regulatory frameworks are evolving to provide clearer guidelines and foster innovation. Governments are exploring Central Bank Digital Currencies (CBDCs) to leverage blockchain for secure and efficient digital currencies.
- Non-Fungible Tokens (NFTs): NFTs are expanding beyond digital art to include various applications such as virtual real estate, gaming, and intellectual property. Platforms like Decentral and Axie Infinity use NFTs to create virtual worlds and gaming ecosystems where users can own and trade digital assets.

| 6 th Semester | Professional Elective -II (PE) EXPLORATORY DATA ANALYIS | M23BCD603B |
|--------------------------|---|------------|
|--------------------------|---|------------|

1. Prerequisites

| S/L | Proficiency | Prerequisites |
|-----|-----------------------|--|
| 1 | Basic Statistics | Descriptive Statistics: Understanding of measures of central tendency (mean, median, mode) and measures of dispersion (variance, standard deviation). Probability Theory: Basic concepts of probability distributions, random variables, and their properties. |
| 2 | Programming Skills | Data Manipulation: Proficiency in a programming language commonly used in data analysis, such as Python or R. Libraries/Packages: Familiarity with libraries/packages like Pandas, NumPy, Matplotlib (Python), or dplyr, ggplot2 (R) for data handling and visualization. |
| 3 | Data Analysis | Data Types: Understanding different types of data (categorical, numerical) and their implications for analysis. Visualization Techniques: Basic skills in creating charts and graphs to visualize data patterns and distributions. |
| 4 | Mathematics | Linear Algebra: Understanding matrices and vectors, as they are essential for data transformations and manipulations. Calculus: Basic knowledge of functions and derivatives for understanding algorithms used in data analysis. |
| 5 | Data Handling | Data Cleaning: Techniques for handling missing values, data transformation, and normalization. Data Structures: Understanding of different data structures (e.g., arrays, lists, data frames) used for storing and manipulating data. |

2. Competencies

| S/L | Competency | KSA Description |
|-----|--------------|---|
| 1 | Introduction | Knowledge: Classification problems and their real-life applications, Exploratory Data Analysis (EDA) techniques, Data types and numerical summarization Skills: Ability to identify and formulate classification problems, Proficiency in conducting EDA, Calculating and interpreting similarity and distance measures Attitudes: Curiosity about data patterns and relationships, Commitment to data-driven decision making |

2023Scheme - 5^{th} to 6^{th} Sem Competency Based Syllabi for B.E in CS(DS)

| 2 | Statistical Learning and Model Selection | Knowledge: Prediction Accuracy and Error Skills: Analytical Skills: Ability to analyze prediction errors and model performance Application Skills: Proficiency in applying different cross-validation techniques Attitudes: Critical Thinking: Approach model selection with a critical mind-set Evaluate the pros and cons of different techniques Attention to Detail: Recognize the importance of careful data handling and analysis Pay close attention to model performance metrics Curiosity: Show interest in understanding the underlying principles of statistical |
|---|--|---|
| 3 | Linear Regression and Variable | Knowledge: Understanding of linear regression concepts and theory Familiarity with statistical measures like expectation and variance |

| | • | |
|---|---|---|
| | Selection: | Comprehension of frequentist statistical principles Skills: Ability to interpret and analyze example results in linear regression Proficiency in using R for statistical analysis and scripting Capability to perform parameter estimation in linear models Skill in applying variable selection techniques Ability to justify theoretical concepts mathematically Attitudes: Attention to detail in statistical analysis Curiosity about the theoretical underpinnings of statistical methods |
| 4 | Regression Shrinkage Methods and Tree based method: | Knowledge: Regression Shrinkage Methods: Ridge Regression: Concept and mathematical formulation Tree-based Methods: Decision tree construction Skills: Implement Ridge and Lasso regression using statistical software (e.g., R) Construct and interpret decision trees Apply pruning techniques to avoid overfitting Attitudes: Appreciate the trade-offs between model complexity and interpretability Understand the importance of regularization in high-dimensional datasets |
| 5 | Principal Components Analysis and Classification: | Knowledge: SVD and its mathematical foundations PCA concepts and applications Classification theory and methods Skills: Implement SVD and PCA algorithms Analyze high-dimensional data Apply various classification methods Interpret and visualize results Compare and evaluate different classification techniques Attitudes: Willingness to explore multiple approaches |

3.Syllabus

| EXPLORATORY DATA ANALYSIS SEMESTER – VI | | | | |
|--|-----------------|-------------|-----|--|
| Course Code | M23BCD603B | CIE Marks | 50 | |
| Number of Lecture Hours/Week(L: T: P: S) | (3:0:0) | SEE Marks | 50 | |
| Total Number of Lecture Hours | 42 hours Theory | Total Marks | 100 | |
| Credits | 03 | Exam Hours | 03 | |

Course Objectives:

- Explain the role of EDA in the data analysis process and its significance in uncovering data patterns.
- Demonstrate skills in preparing and cleaning data, including handling missing values and outliers.
- Interpret descriptive statistics and create visualizations to summarize data distributions and relationships.
- Analyze patterns, trends, and correlations in data using various exploratory techniques.
- **Apply** dimensionality reduction methods to simplify data and highlight key patterns.
- Utilize data analysis tools (e.g., R, Python) and effectively communicate findings through visualizations and summaries.

Module -1

Applications-Nature of The Problem- Classification Problems in Real Life- Email Spam, Handwritten Digit Recognition, Image segmentation, Speech Recognition, DNA Expression Microarray, DNA Sequence Classification. Exploratory Data Analysis (EDA)- What is Data- Numerical Summarization - Measures of Similarity and Dissimilarity, ProximityDistance- Euclidean Distance, Minkowski Distance, Mahalanobis Distance Visualization-Tools for Displaying Single Variables - Tools for Displaying Relationships Between

Two Variables - Tools for Displaying More Than Two Variables R Scripts - R Library: ggplot2-R Markdown

Module -2

Statistical Learning and Model Selection: Prediction Accuracy - Prediction Error, Training and Test Error as A Function of Model Complexity, Over fitting a Model, Bias-Variance Trade-off, Cross Validation- Holdout Sample: Training and Test Data, Three-way Split: Training, Validation and Test Data, Cross-Validation, Random Sub sampling, K-fold Cross-Validation, Leave-One-Out Cross-Validation with examples for each.

Module -3

Linear Regression and Variable Selection: Meaning-Review Expectation, Variance, Frequentist Basics, Parameter Estimation, Linear Methods, Point Estimate, Example Results, Theoretical Justification, R Scripts. Variable Selection- Variable Selection for the Linear Model, R Scripts.

Module -4

Regression Shrinkage Methods and Tree based method: Meaning, Types-Ridge Regression, Compare Squared Loss for Ridge Regression, More on Coefficient Shrinkage, The Lasso. Tree Based Methods-Construct the Tree, The Impurity Function, Estimate the Posterior Probabilities of Classes in Each Node, Advantages of the Tree-Structured Approach, Variable Combinations, Missing Values, Right Sized Tree via Pruning, Bagging and Random Forests, R Scripts, Bagging, From Bagging to Random Forests, Boosting

Module -5

Principal Components Analysis and Classification: Singular Value Decomposition (SVD), Principal Components, Principal Components Analysis (PCA), Geometric Interpretation, Acquire Data, Classification - Classification Error Rate, Bayes Classification Rule, Linear Methods for Classification, Logistic Regression - Assumptions, Comparison with Linear Regression on Indicators - Fitting based on Optimization Criterion, Binary Classification, Multiclass Case ($K \ge 3$), Discriminant Analysis - Class Density Estimation, Linear Discriminant Analysis, Optimal Classification

4. Syllabus Timeline

| S/L | Syllabus Timeline | Description |
|-----|-------------------|-------------|
|-----|-------------------|-------------|

2023Scheme - 5th to 6th Sem Competency Based Syllabi for B.E in CS(DS)

| 1 | Week 1-3: Introduction | Applications- Nature of The Problem- Classification Problems in Real Life- Email Spam, Handwritten Digit Recognition, Image segmentation, Speech Recognition, DNA Expression Microarray, DNA Sequence Classification. Exploratory Data Analysis (EDA)- |
|---|--|---|
| 2 | Week 4-6: Statistical Learning and Model Selection | Prediction Accuracy - Prediction Error, Training and Test Error as A Function of Model Complexity, Over fitting a Model, Bias-Variance Tradeoff, Cross Validation |
| 3 | Week 8-11: Linear Regression and Variable Selection | Review Expectation, Variance, Frequentist Basics, Parameter Estimation, Linear Methods, Point Estimate, Example Results, Theoretical Justification, R Scripts. Variable Selection- Variable Selection for the Linear Model, R Scripts. |
| 4 | Week 7-8: Regression Shrinkage Methods and Tree based method: | Meaning, Types-Ridge Regression, Compare Squared Loss for Ridge Regression, More on Coefficient Shrinkage, The Lasso. Tree Based Methods-Construct the Tree, The Impurity Function, Estimate the Posterior Probabilities of Classes in Each Node. |
| 5 | Week 9-12: Principal Components Analysis and Classification: | Singular Value Decomposition (SVD), Principal Components, Principal Components Analysis(PCA), Geometric Interpretation, Acquire Data, |

5. Teaching-Learning Process Strategies

| S/L | TLP Strategies: | Description |
|-----|----------------------------|---|
| 1 | Lecture Method | Utilize various teaching methods within the lecture format to reinforce competencies. |
| 2 | Video/Animation | Incorporate visual aids like videos/animations to enhance understanding |
| 3 | Collaborative Learning | Encourage collaborative learning for improved competency application. |
| 4 | Real-World Application | Discuss practical applications to connect theoretical concepts with real-world competencies. |
| 5 | Flipped Class Technique | Utilize a flipped class approach, providing materials before class to facilitate deeper understanding of competencies |

6. Assessment Details (both CIE and SEE) Continuous Internal Evaluation:

The minimum CIE marks requirement is 40% of maximum marks in each component. CIE

Split up

| | Components | Number | Weightage | Max. Marks | Min. Marks |
|------|-------------------------------|--------------|-----------|------------|------------|
| (i) | Internal Assessment-Tests (A) | 2 | 50% | 25 | 10 |
| (ii) | Assignments/Quiz/Activity (B) | 2 | 50% | 25 | 10 |
| | Total N | Iarks | | 50 | 20 |

Final CIE Marks = (A) + (B) Average

internal assessment shall be the average of the 2 test marks conducted.

Semester End Examination:

- 1. Question paper pattern will be ten questions. Each question is set for 20 marks. The medium of the question paper shall be English unless otherwise it is mentioned.
- 2. There shall be 2 question from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have mix of topics under that module if necessary.
- 3. The students have to answer 5 full questions selecting one full question from each module.
- 4. Marks scored will be proportionally scaled down to 50 marks

7. Learning Objectives

| S/L | Learning Objectives | Description |
|-----|---|--|
| 1 | Understand the Purpose of EDA | Grasp the significance of EDA in the data science process and how it helps to extract insights, identify patterns, and set up the foundation for further analysis. |
| 2 | Learn Various Data Types and Formats | Identify different types of data (numerical, categorical, time-series, etc.). Understand the structure of datasets, including features, observations, and types of variables. |
| 3 | Data Cleaning Techniques | Gain proficiency in identifying and handling missing data, outliers, and duplicates. Understand techniques like data imputation, transformation, and normalization for preparing data. |
| 4 | Univariate and Multivariate Analysis | Perform univariate analysis using techniques like summary statistics (mean, median, mode, variance). Explore relationships between multiple variables using correlation analysis, crosstabulation, and pair plots. |
| 5 | Visualization Techniques | Learn to create effective visual representations of data using histograms, box plots, bar charts, scatter plots, heatmaps, etc., to identify patterns and outliers. Use visualization tools like Matplotlib, Seaborn, or Tableau for effective data communication. |
| 6 | Reporting and Presenting EDA Findings | Develop skills to document EDA findings clearly. Learn how to effectively communicate insights gained from EDA through visualizations and narrative reports for stakeholders. |

8. Course Outcomes (COs) and Mapping with POs/ PSOs

Course Outcomes (COs)

| COs | Description |
|--------------|--|
| M23BCD603B.1 | Apply EDA techniques to classification problems using numerical summarization and distance metrics. |
| M23BCD603B.2 | Choose statistical learning methods and model selection techniques, including various cross-validation approaches |
| M23BCD603B.3 | Use linear regression and variable selection methods, with practical R scripts for parameter estimation. |
| M23BCD603B.4 | Explore regression shrinkage methods and tree-based methods, including ridge regression, lasso, and random forests, using R scripts. |
| M23BCD603B.5 | Analyze PCA and classification methods, including logistic regression and discriminant analysis, for binary and multiclass problems. |

CO-PO-PSO Mapping

| Module 4 | | | | 20 | | 20 |
| Module 5 | | | | | 20 | 20 |
| Total | 20 | 20 | 20 | 20 | 20 | 100 |

10. Future with this Subject:

1. Advanced Visualization Tools

Future advancements will likely bring more sophisticated and intuitive visualization tools. Expect to see more interactive dashboards, enhanced data storytelling features, and the integration of augmented reality (AR) and virtual reality (VR) for immersive data exploration.

2. Automated EDA

Automation in EDA is becoming more prevalent, with tools and platforms incorporating machine learning algorithms to automatically generate visualizations and highlight significant patterns. This can significantly speed up the analysis process and make EDA more accessible to non-experts.

3. Integration with Big Data Technologies

As data volumes grow, EDA tools are evolving to better integrate with big data technologies like Hadoop and Spark. This means handling larger datasets efficiently and performing real-time analysis.

| 6 th Semester | Professional Elective II (PE) TIME SERIES ANALYSIS | M23BCD603C |
|--------------------------|--|------------|
|--------------------------|--|------------|

1. Prerequisites

| S/L | Proficiency | Prerequisites |
|-----|---|--|
| 1 | Basic Statistics and Probability | Understanding of probability distributions (normal, binomial, etc.). Descriptive statistics (mean, median, variance, standard deviation). Hypothesis testing and confidence intervals. Concepts of correlation and covariance. |
| 2 | Linear Algebra | Basic operations with matrices and vectors. Matrix decomposition (e.g., Eigenvalues, Eigenvectors). Understanding of linear transformations. |
| 3 | Calculus | Differentiation and integration of functions. Understanding of limits and continuity. Partial derivatives and optimization. |
| 4 | Regression Analysis | Simple and multiple linear regression. Interpretation of regression coefficients. Assumptions of linear regression models (e.g., homoscedasticity, multicollinearity) |
| 5 | Computational Skills | Familiarity with statistical software or programming languages (e.g., R, Python). Ability to perform data manipulation and visualization. Basic understanding of time series packages or libraries (e.g., statsmodels in Python, TSA in R). |
| 6 | Introductory Knowledge of Time Series | Basic concepts of time series data (e.g., time dependence, lag). Understanding of time series plots (trend, seasonality). Familiarity with basic smoothing techniques |
| 7 | Experience with Data Analysis | Experience in handling real-world datasets. Ability to clean, preprocess, and analyze data. Understanding of the importance of data quality and its impact on analysis. |

2. Competencies

| S/L | Competency | KSA Description |
|-----|-------------------------|---|
| 1 | TIME SERIES ANALYSIS | Knowledge: Understanding of real-world applications of mathematical modeling Familiarity with common problems in fields like physics, engineering, economics, etc. Skills: Ability to identify and formulate practical problems mathematically Capability to select appropriate modeling techniques for different scenarios Attitude: Appreciation for the relevance of mathematics in solving real-world issues Curiosity about interdisciplinary applications of mathematical concepts |

| 2 | LINEAR STATIONARY MODELS | Knowledge: Understanding of the General Linear Process concept Comprehension of Autoregressive (AR) Processes Knowledge of Moving Average (MA) Processes. Skills: Ability to identify and differentiate between various linear stationary models Capability to formulate and estimate AR, MA, and ARMA models • Proficiency in interpreting model parameters and results Attitudes: Appreciation for the importance of time series analysis in various fields Critical thinking approach to model selection and interpretation |
|---|--------------------------------|--|
| 3 | ARMA | Knowledge:Understanding of Yule-Walker estimation for AR processes |

| | | Comprehension of maximum likelihood estimation for ARMA processes | | | | |
|-----|----------|---|--|--|--|--|
| | | Grasp of least squares estimation for ARMA processes | | | | |
| | | • Knowledge of large sample theory for estimating mean, auto-covariance, and | | | | |
| | | auto-correlation functions Skills: | | | | |
| | | Ability to apply Yule-Walker equations to estimate AR model parameters | | | | |
| | | • Capability to implement maximum likelihood estimation for ARMA models | | | | |
| | | • Proficiency in using least squares methods for ARMA model estimation • | | | | |
| | | Skill in interpreting estimation results in the context of large sample theory | | | | |
| | | Attitudes: | | | | |
| | | • Appreciation for the importance of proper model estimation in time series | | | | |
| | | analysis | | | | |
| | | Critical thinking approach to selecting appropriate estimation methods | | | | |
| | | Attention to detail in implementing estimation procedures | | | | |
| | | Curiosity about the theoretical foundations of estimation techniques | | | | |
| | | Knowledge: | | | | |
| | | Understanding of time series components: trend, seasonality, cyclical patterns, | | | | |
| | | and irregular fluctuations | | | | |
| | | • ARIMA model structure and parameters (p,d,q) | | | | |
| | | Concepts of stationarity and differencing | | | | |
| | | Spectral analysis principles, including Herglotz's theorem | | | | |
| | | Period gram and correlogram interpretation | | | | |
| | | Skills: | | | | |
| 4 | RESIDUAL | Ability to perform residual analysis and interpret results | | | | |
| i i | ANALYSIS | Proficiency in diagnostic checking of time series models | | | | |
| | | Capability to fit and evaluate ARIMA models | | | | |
| | | • Competence in using R for time series analysis and forecasting • Skill in | | | | |
| | | conducting and interpreting spectral analysis Attitudes: | | | | |
| | | Attention to detail in model diagnostics and residual analysis | | | | |
| | | Openness to exploring different model specifications | | | | |
| | | • Curiosity about underlying patterns and structures in time series data | | | | |
| | | • Commitment to rigorous statistical practices | | | | |
| | | Willingness to learn and apply new techniques in time series analysis | | | | |

| | | Knowledge: |
|---|---------------------------|--|
| | | Non-linear time series models: 1. ARCH (Autoregressive Conditional Heteroskedasticity) models 2. GARCH (Generalized Autoregressive Conditional Heteroskedasticity) models |
| | | Multivariate time series models: Vector Auto regression (VAR) models Cointegration concepts 3. Error Correction Models (ECM) |
| 5 | NON-LINEAR TIME SERIES | Skills: Data analysis and interpretation: Ability to identify and model volatility clustering in financial data |
| | TIME SERIES | Statistical software usage: Competence in using statistical software packages (e.g., R, Python, STATA, EViews) for time series modeling Model specification and estimation: Skill in specifying appropriate ARCH/GARCH models based on data characteristics |
| | | Forecasting: Capability to generate and interpret forecasts from various time series models |
| | | • Diagnostic testing: Skill in performing and interpreting model diagnostic tests Attitudes: |
| | | Analytical mindset: Willingness to explore complex relationships in data Continuous learning: Openness to staying updated with new developments in time series analysis techniques |
| | | Critical thinking: Ability to critically evaluate model assumptions and limitations |
| | | • Patience and persistence: Willingness to iterate through model specifications to find the best fit |
| | 4 Syllobus | • Interdisciplinary approach: Appreciation for the application of these models across various fields (e.g., economics, finance, environmental studies) |

4. Syllabus

| TIME SERIES ANALYSIS SEMESTER – VI | | | | | |
|--|-----------------|-------------|-----|--|--|
| Course Code | M23BCD603C | CIE Marks | 50 | | |
| Number of Lecture Hours/Week(L: T: P: S) | (3:0:0) | SEE Marks | 50 | | |
| Total Number of Lecture Hours | 50 hours Theory | Total Marks | 100 | | |
| Credits | 03 | Exam Hours | 03 | | |

Course Objectives:

- 1. Understand the key concepts of stationarity, ergodicity, and correlation functions in time-series analysis.
- 2. Apply AR, MA, ARIMA, and Seasonal ARIMA models to analyze time-series data.
- 3. Conduct spectral analysis and parameter estimation techniques for time-series models.
- 4. Implement time-series analysis methods in R, focusing on practical applications across various fields.

Module -1

Introduction: Five Important Practical Problems, Stochastic and Deterministic Dynamic Mathematical Models, Autocorrelation Properties of Stationary Models, Spectral Properties of Stationary Models TEXTBOOK 1:Chapter 1,2

Module -2

Linear Stationary Models: General Linear Process, Autoregressive Processes, Moving Average Processes, Mixed Autoregressive--Moving Average Processes

TEXTBOOK 1:Chapter 3

Module -3

Estimation of ARMA models: Yule – Walker estimation for AR Processes, Maximum likelihood and least squares estimation for ARMA Processes, Discussion (without proof) of estimation of mean, Auto-covariance and auto-correlation function under large samples theory

TEXTBOOK 1: Chapter 4

Module -4

Residual analysis and diagnostic checking. Forecasting using ARIMA models, Use of computer packages like R. Spectral analysis of weakly stationary process Herglotzic Theorem. Period gram and correlogram analysis TEXTBOOK 1:Chapter 4,5

Module -5

Introduction to non-linear time Series: ARCH and GARCH models. **Multivariate Time Series Models** Vector Auto regression (VAR) models. Cointegration and Error Correction Models.

TEXTBOOK 1: Chapter 14

TEXTBOOKS:

- 1. Box G.E.P and Jenkins G.M. (1994). Time Series Analysis, Forecasting and Control. Holden-Day
- 2. BrockwellP.J.and Davis R.A. (2006). Time Series: Theory and Methods, Springer Verlag. **REFERENCE BOOKS**.

1. Abraham B and Ledolter J.C. (1983). Statistical Methods for Forecasting, Wiley 4. Robert H2. Shumway and Davis S Stoffer(2016). Time series analysis and its applications with R examples. Springer. **VIDEO**

5. Syllabus Timeline

| S/L | Syllabus Timeline | Description |
|-----|---|--|
| 1 | Week 1-3: Introduction | What is time series ,what is Stochastic and Deterministic Dynamic Mathematical Models, Autocorrelation Properties of Stationary Models, Spectral Properties of Stationary Models |
| 2 | Week 4-6: Linear Stationary Models | General Linear Process, Autoregressive Processes, Moving Average Processes, Mixed AutoregressiveMoving Average Processes |
| 3 | Week 8-11: ARMA | Estimation of ARMA models: Yule – Walker estimation for AR Processes, Maximum likelihood and least squares estimation for ARMA Processes, |
| 4 | Week 7-8: Residual Analysis | Residual analysis and diagnostic checking. Forecasting using ARIMA models, Use of computer packages like R. Spectral analysis of weakly stationary process Herglotzic Theorem |
| 5 | Week 9-12: Introduction to non- linear time Series | ARCH and GARCH models. Multivariate Time Series Models Vector Auto regression (VAR) models. Cointegration and Error Correction Models. |

6. Teaching-Learning Process Strategies

| | 0. Teaching-Learning 1 tocess Su ategies | | | | | |
|-----|--|---|--|--|--|--|
| S/L | TLP Strategies: | Description | | | | |
| 1 | Lecture Method | Utilize various teaching methods within the lecture format to reinforce competencies. | | | | |
| 2 | Video/Animation | Incorporate visual aids like videos/animations to enhance understanding of Verilog concepts. | | | | |
| 3 | Collaborative Learning | Encourage collaborative learning for improved competency application. | | | | |
| 4 | Real-World Application | Discuss practical applications to connect theoretical concepts with real-world competencies. | | | | |
| 5 | Flipped Class Technique | Utilize a flipped class approach, providing materials before class to facilitate deeper understanding of competencies | | | | |

7. Assessment Details (both CIE and SEE) Continuous Internal Evaluation:

The minimum CIE marks requirement is 40% of maximum marks in each component. CIE

Split up

| | Components | Number | Weightage | Max. Marks | Min. Marks |
|------|-------------------------------|--------|-----------|------------|---------------|
| (i) | Internal Assessment-Tests (A) | 2 | 50% | 25 | 10 |
| (ii) | Assignments/Quiz/Activity (B) | 2 | 50% | 25 | 10 |
| | Total M | 50 | 20 | | |

Final CIE Marks = (A) + (B)

Average internal assessment shall be the average of the 2 test marks conducted.

Semester End Examination:

- 1. Question paper pattern will be ten questions. Each question is set for 20 marks. The medium of the question paper shall be English unless otherwise it is mentioned.
- 2. There shall be 2 question from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have mix of topics under that module if necessary.
- 3. The students have to answer 5 full questions selecting one full question from each module.
- 4. Marks scored will be proportionally scaled down to 50 marks

8. Learning Objectives

| S/L | Learning Objectives | Description |
|-----|---------------------------------------|---|
| 1 | Understand Fundamental Concepts | Grasp the principles of stationarity, ergodicity, and their significance in time-series data analysis. |
| 2 | Analyze Correlation Structures | Learn to compute and interpret auto-correlation, cross-correlation, and partial correlation functions. |
| 3 | Model Time-Series Data | Develop the ability to construct and apply various time-series models, including AR, MA, ARIMA, and Seasonal ARIMA |
| 4 | Implement Practical Solutions in R | Acquire hands-on experience in applying time-series analysis techniques using R, with real-world data from various disciplines. |

9. Course Outcomes (COs) and Mapping with POs/ PSOs Course Outcomes (COs)

| COs | Description |
|--------------|--|
| M23BCD603C.1 | Apply key concepts of time series analysis, including stochastic vs. deterministic models, and the autocorrelation and spectral properties of stationary models, to solve practical data problems. |
| M23BCD603C.2 | Apply linear stationary models, including AR, MA, and ARMA processes, to effectively analyze and model time series data. |
| M23BCD603C.3 | Identify residual analysis, forecast with ARIMA models, use R for time series analysis, and perform spectral analysis including periodogram and correlogram. |
| M23BCD603C.4 | Examine non-linear time series with ARCH/GARCH models, employ VAR models for multivariate data, and study cointegration and error correction models. |

CO-PO-PSO Mapping

| COs/POs | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 | PSO1 | PSO2 |

11. Future with this Subject:

Growing Demand in Various Fields

- 1. **Finance**: Time series analysis is critical for stock market prediction, risk assessment, and algorithmic trading.
- 2. **Healthcare**: Used in patient monitoring systems, disease prediction, and managing large datasets from IoT devices.
- 3. **Economics**: Forecasting economic indicators like inflation rates, GDP growth, and unemployment rates.
- 4. Environmental Science: Predicting weather patterns, climate change models, and air quality monitoring.
- 5. **Engineering**: In control systems, time series data is used for system identification and predictive maintenance.

| 6 th Semester | Professional Elective -II (PE) SOCIAL NETWORK ANALYSIS | M23BCS603D |
|--------------------------|---|------------|
|--------------------------|---|------------|

1. Prerequisites

| S/L | Proficiency | Prerequisites |
|-----|---------------------------------|---|
| 1 | Mathematics | Graph Theory: Understanding concepts like nodes, edges, paths, and centrality measures (e.g., degree centrality, closeness centrality). Probability: Basics of probability theory can be useful for understanding stochastic processes in networks. |
| 2 | Statistical | Proficiency in statistical methods to analyse network data, including descriptive statistics, hypothesis testing, and regression analysis. |
| 3 | Computational | Programming: Familiarity with programming languages such as Python, R, or Java is important for implementing SNA algorithms and processing data. |
| 4 | Data Handling and Management | Data Collection: Skills in collecting and cleaning data from various sources, including social media, surveys, or databases. |
| 5 | Structural Analysis: | Basic Concepts: Understanding fundamental graph theory concepts such as types of networks (e.g., directed, undirected, weighted) and network metrics (e.g., clustering coefficient, network density). Advanced Metrics: Knowledge of more advanced metrics like community detection, network robustness, and dynamic network analysis. |

2023Scheme - 5^{th} to 6^{th} Sem Competency Based Syllabi for B.E in CS(DS)

| 6 | Data Interpretation: | Visualization: Ability to create and interpret network visualizations to identify patterns, clusters, and outliers. Statistical Analysis: Skills in applying statistical techniques to validate network findings and draw meaningful conclusions. |
|---|--------------------------|---|
| 7 | Practical Application | Case Studies: Experience with real-world data and case studies to understand practical challenges and solutions in network analysis. |

2. Competencies

| | Competencies | |
|-----|----------------------------|---|
| S/L | Competency | KSA Description |
| 1 | Introduction | Knowledge: Semantic Web principles and technologies, Social Web concepts and platforms, Network analysis methodologies Key concepts in social network analysis. Skills: Web development basics, Data mining and analysis Use of network analysis tools Attitudes: Attention to detail in calculations and diagrams. Persistence in analyzing complex load scenarios. |
| 2 | Modeling and visualization | Knowledge: Graph theory fundamentals Social network analysis principles, Data visualization techniques Centrality measures in network analysis Skills: Implementing graph algorithms Creating and interpreting node-edge diagrams Developing matrix-based network representations, Designing hybrid network visualizations Attitudes: Analytical mind set for interpreting complex network structures Curiosity about social dynamics and their digital representations |
| | Extraction and | Knowledge: |
| | mining | Definitions of social network structures and dynamics Familiarity with community |
| 3 | communities in | detection algorithms Knowledge of web archiving techniques and formats |
| | web social | Understanding of multi-relational and dynamic network models Awareness of |
| | networks | decentralized online social networks Grasp of evaluation metrics for community |

| | | detection. Skills: Proficiency in programming languages (e.g., Python, R) Experience with network analysis tools (e.g., Network, Gephi) Ability to implement and adapt community detection algorithms Data pre-processing and cleaning Attitudes: Respect for user privacy and data protection. Ethical consideration in behaviour prediction and analysis Commitment to transparency in data collection and use Proactive approach to security and trust issues Curiosity about human behaviour and social dynamics Openness to interdisciplinary approaches |
|---|--|---|
| 4 | Predicting human behaviour and privacy issues | Knowledge: Data management principles and techniques Statistical inference and distribution methods Reality mining concepts and applications Context-awareness in social computing Privacy concepts and regulations in online environments Skills: Data collection and analysis Predictive modelling of human behaviour Designing privacy-preserving systems Implementing trust models and algorithms Attitudes: Trust in online environment – Trust models based on subjective logic – Trust network analysis – Trust transitivity analysis – Combining trust and reputation – Trust derivation based on trust comparisons – Attack spectrum and counter measures. |
| 5 | Application | Knowledge: Machine learning algorithms and techniques Linguistic analysis methods, Emotion classification models Social media data structures and APIs, Emerging technology trends Skills: Programming (e.g., Python, R) Statistical analysis and Data visualization Model development and evaluation, API integration and Network graph analysis. Attitudes: It is use for Commitment to data security. |

3. Syllabus

| SOCIAL NETWORK ANALYSIS SEMESTER – VI | | | | | | | | | | |
|--|-------------|------------|----|--|--|--|--|--|--|--|
| Course Code | M23BCS603D | CIE Marks | 50 | | | | | | | |
| Number of Lecture Hours/Week(L: T: P: S) | (3:0:0:0) | SEE Marks | 50 | | | | | | | |
| Total Number of Lecture Hours | Total Marks | 100 | | | | | | | | |
| Credits | 03 | Exam Hours | 03 | | | | | | | |

Course Objectives:

- 1. Ability to understand the fundamental concepts and applications of social network analysis
- 2. Ability to model and visualize the social network
- 3. Ability to extract and Mine Communities in Web Social Networks
- 4. Ability to evaluate link prediction techniques and cascade models to predict network behavior and changes.
- 5. Ability to analyze anomaly detection techniques to identify and address malicious activities in networks.

Module -1

Networks and Society, What is Social Network Analysis?, Why do We Study Social Networks? Applications of Social Network Analysis, Preliminaries, Three Levels of Social Network Analysis, Graph Visualization Tools, Network Measures, Network Basics, Node Centrality, Assortativity, Transitivity and Reciprocity, Similarity, Degeneracy

Text Book1:Chapter 1,2

Module -2

Network Growth Models, Properties of Real-World Networks, Random Network Model, Ring Lattice Network Model, Watts—Strogatz Model, Preferential Attachment Model, Price's Model, Local-world Network Growth Model, Network Model with Accelerating Growth, Aging in Preferential Attachment, Link Analysis, Applications of Link Analysis, Signed Networks, Strong and Weak Ties, Link Analysis Algorithms,

 $PageRank, Personalised\ PageRank, DivRank, SimRank, Path SIM$

Text Book1: Chapter 3,4

Module -3

Community Structure in Networks, Applications of Community Detection, Types of Communities, Community Detection Methods, Disjoint Community Detection, Overlapping Community Detection, Local Community Detection, Community Detection vs Community Search, Evaluation of Community Detection Methods, Link Prediction, Applications of Link Prediction, Temporal Changes in a Network, Problem Definition Text Book1:Chapter 5, 6.1,6.2,6.3

Module -4

Evaluating Link Prediction Methods, Heuristic Models, Probabilistic Models, Supervised Random Walk, Information-theoretic Model, Latest Trends in Link Prediction, Cascade Behaviours and Network Effects, Preliminaries and Important Terminologies, Cascade Models, Case Study – The "Indignados" Movement Probabilistic Cascades, Epidemic Models Independent Cascade Models, Cascade Prediction Text Book 1: Chapter 6.4,6.5,6.6,6.7,6.8,6.9, Chapter 7

Module -5

Anomaly Detection in Networks, Outliers versus Network-based Anomalies, Challenges, Anomaly Detection in Static Networks, Anomaly Detection in Dynamic Networks Malicious Activities on OSNs, Sockpuppets in OSNs, Collusion on Online Social Networks

Text Book1:Chapter 8,10.1,10.2,10.3

TEXTBOOKS:

- 1. Social Network Analysis, k Tanmoy Chakraborty, Publisher. Wiley · Publication date. 1 October 2021
- 2. Guandong Xu, Yanchun Zhang and Lin Li,-Web Mining and Social Networking Techniques and applications, First Edition, Springer, 2011.

| S/L | Syllabus Timeline | Description |
|-----|--|--|
| 1 | Week 1-3: Introduction Networks And Society | Networks and Society, Three Levels of Social Network Analysis ,Graph Visualization Tools, Network Measures, Network Basics, Node Centrality, Assortativity ,Transitivity and Reciprocity, Similarity, Degeneracy |
| 2 | Week 4-6: Network Growth Models And Link Analysis | , Properties of Real-World Networks, Random Network Model, Ring Lattice Network Model, Watts-Strogatz Model, Preferential Attachment Model, Price's Model, Localworld Network Growth Model, |
| 3 | Week 8-11: Community Structure In Networks | Community Detection Methods, Disjoint Community Detection, Overlapping Community Detection, Local Community Detection, Community Detection vs Community Search, Evaluation of Community Detection Methods, Link Prediction, Applications of Link Prediction, Temporal Changes in a Network, Problem Definition |

5. Teaching-Learning Process Strategies

| S/L | TLP Strategies: | Description | | | | | |
|-----|----------------------------|--|--|--|--|--|--|
| 1 | Lecture Method | Utilize various teaching methods within the lecture format to reinforce competencies. | | | | | |
| 2 | Video/Animation | Incorporate visual aids like videos/animations to enhance understanding of Verilog concepts. | | | | | |
| 3 | Collaborative Learning | Encourage collaborative learning for improved competency application. | | | | | |
| 4 | Real-World Application | Discuss practical applications to connect theoretical concepts with real-world competencies. | | | | | |
| 5 | Flipped Class Technique | Utilize a flipped class approach, providing materials before class to facilitate deeper understanding of competencies | | | | | |
| 6 | Laboratory Learning | Knowledge about tools related to social networks and implementation of social network visualizations using tools such as Gephi, Cytoscape. | | | | | |

6. Assessment Details (both CIE and SEE) Continuous Internal Evaluation:

2023Scheme - 5th to 6th Sem Competency Based Syllabi for B.E in CS(DS)

| 4 | Week 7-8: Evaluating Link Prediction Methods | Heuristic Models, Probabilistic Models, Supervised Random Walk, Informationtheoretic Model, Latest Trends in Link Prediction, Cascade Behaviours and Network Effects, Preliminaries and Important Terminologies, Cascade Models, Case Study — The "Indignados" Movement, Probabilistic Cascades, Epidemic Models Independent Cascade Models, Cascade Prediction |
|---|---|--|
| 5 | Week 9-12: Anomaly Detection In Networks | Outliers versus Network-based Anomalies, Challenges, Anomaly Detection in Static Networks, Anomaly Detection in Dynamic Networks Malicious Activities on OSNs, Sockpuppets in OSNs, Collusion on Online Social Networks |

The minimum CIE marks requirement is 40% of maximum marks in each component. CIE

Split up

| Compo | nents | Number | Weightage | Max. Marks | Min. Marks | |
|-------|-------------------------------|--------|-----------|------------|------------|--|
| (i) | Internal Assessment-Tests (A) | 2 | 50% | 25 | 10 | |
| (ii) | Assignments/Quiz/Activity (B) | 2 | 50% | 25 | 10 | |
| | Total N | 50 | 20 | | | |

Final CIE Marks = (A) + (B)

Average internal assessment shall be the average of the 2 test marks conducted.

Semester End Examination:

- 1. Question paper pattern will be ten questions. Each question is set for 20marks. The medium of the question paper shall be English unless otherwise it is mentioned.
- 2. There shall be 2 question from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have mix of topics under that module if necessary.
- 3. The students have to answer 5 full questions selecting one full question from each module. 4. Marks scored will be proportionally scaled down to 50 marks

7. Learning Objectives

| S/L | Learning Objectives | Description |
|-----|----------------------------|---|
| 1 | Introduction | Web - Limitations of current Web – Development of Semantic Web – Emergence of the Social Web – Statistical Properties of Social Networks Analysis. |
| 2 | Modeling and visualization | Visualizing Online Social Networks - A Taxonomy of Visualizations - Graph Representation - Centrality-Clustering - Node-Edge Diagrams - Visualizing Social Networks with Matrix - Based Representations - Node-Link Diagrams |
| 3 | Extraction and | Definition of community – Evaluating communities – Methods for community |
| | _ | detection and mining – Applications of community mining algorithms – Tools for detecting communities social network infrastructures and communities |
| 4 | behavior and | Understanding and predicting human behaviour for social communities — User data management — Inference and Distribution — Enabling new human experiences — Reality mining — Context — Awareness — Privacy in online social networks — Trust in online environment |

2023Scheme - 5th to 6th Sem Competency Based Syllabi for B.E in CS(DS)

| 5 | | A Learning Based Approach for Real Time Emotion Classification of Tweets, A New Linguistic Approach to Assess the Opinion of Users in Social Network Environments, |
|---|--|--|
|---|--|--|

8. Course Outcomes (COs) and Mapping with POs/ PSOs Course Outcomes (COs)

| Cos | Description |
|--------------|--|
| M23BCS603D.1 | Apply social network analysis techniques, including node centrality, assortativity, transitivity, and reciprocity, to analyse and interpret real-world networks. |
| M23BCS603D.2 | <i>Identify different</i> network growth models, link analysis algorithms, and community detection methods to analyze and solve real-world problems involving network structures, such as social networks, biological networks, and organizational systems |
| M23BCS603D.3 | Analyse link prediction methods and network effects, to interpret and examine the underlying patterns and dynamics in complex networks |
| M23BCS603D.4 | Analyse and evaluate anomaly detection techniques for static and dynamic networks, including challenges related to malicious activities and collusion in online social networks. |

10. Future with this Subject:

- Thregration with Artificial Intelligence (AI): AI and machine learning will continue to enhance SNA by providing more sophisticated tools for pattern recognition, predictive analytics, and automated insights. AI algorithms can identify trends, anomalies, and influence patterns that may not be apparent through traditional methods.
- 母 Big Data and Real-Time Analysis: With the growth of big data, SNA will increasingly leverage vast amounts of real-time data from social media platforms, communication networks, and other sources. This will enable more dynamic and timely analysis of social interactions and network structures.
- **Enhanced Visualization Tools:** Advanced visualization techniques will allow for more intuitive and interactive representations of complex social networks. Tools that can effectively illustrate multidimensional relationships and evolving networks will improve our ability to understand and communicate findings.

| | 6 th Semester | Open elective -I Programming in Java | M23BCS604A |
|---|--------------------------|---|------------|
| , | 1. Prerequis | ites | |

| 1. | Trerequisites | |
|-----|--|--|
| S/L | Proficiency | Prerequisites |
| 1 | Basic Programming Concepts | Understanding the use of variables to store data and understand basic data types like integers, floats, characters, and strings. The use of control structures and Understand how to define and call functions or methods, including parameters and return values. |
| 2 | Object-Oriented Programming | Understanding to define classes and create objects in Java and how inheritance allows one class to inherit fields and methods from another. Getting familiar with method overriding and overloading. Learning how to use access modifiers to protect data and ensure a class's internal representation is hidden from the outside. |
| 3 | Basic Knowledge of Java Syntax and Semantics | Understanding the Java-specific syntax and basic error handling using exceptions. |
| 4 | Development Tools and Environment | Choosing an IDE or text editor suitable for Java development, such as IntelliJ IDEA, Eclipse, or NetBeans. Learning the usage of the IDE for coding, debugging, and managing your projects. The JDK provides the necessary tools for compiling and running Java programs. |
| 5 | Compilation and | Understanding the difference between source code and bytecode. Understand the process of compiling Javacode into bytecode and running it on the Java Virtual Machine (JVM). |

Competencies

| <u>~•</u> | Competencies | |
|-----------|--|--|
| S/L | Competency | KSA Description |
| 1 | Core Java Concepts | Knowledge: Proficiency with Java syntax, including how to write correct and efficient code using Java's syntax rules. Skills: Learning the basic concepts of primitive data types in java. Attitude: Fundamental to understanding the language and its capabilities. |
| 2 | Knowledge: Ability to define and instantiate classes and objects. Underst overloading and overriding, and how polymorphism enables | |

| 3 | Java Virtual | Knowledge: Understanding the JVM's role in executing Java applications and how garbage collection works. Skills: Understanding the concept of JVM and Execution process. Attitude: Component of the Java ecosystem, and its design embodies specific attitudes toward performance and execution. |
|---|-------------------|--|
| 4 | Davalanment Teels | Knowledge: Proficiency with build tools like Maven or Gradle for managing dependencies and building projects. Using an Integrated Development Environment (IDE) like IntelliJ IDEA, Eclipse, or NetBeans effectively. Skills: Understanding the development of new projects using java. Attitude: Commitmentto efficiency, quality, collaboration, and continuous improvement. |

3. Syllabus

| Programmi | ngin Java SEMESTER – VI | | |
|---|----------------------------|-------------|-----|
| Course Code | M23BCS604A | CIE Marks | 50 |
| Number of Lecture Hours/Week (L: T: P: S) | (3:0:0:0) | SEE Marks | 50 |
| Total Number of Lecture Hours | 40 Hours | Total Marks | 100 |
| Credits | 03 | Exam Hours | 03 |

Course objectives: This course will enable students to

- 1.Learn fundamental features of object oriented language and JAVA
- 2. Set up Java JDK environment to create, debug and run simple Java programs.
- 3.Learn object oriented concepts using programming examples.
- 4. Study the concepts of importing of packages and exception handling mechanism.
- 5. Discuss the String Handling examples with Object Oriented concept

Module -1

An Overview of Java: Object-Oriented Programming, A First Simple Program, A Second Short Program, Two Control Statements, Using Blocks of Code, Lexical Issues, The Java Class Libraries.

Data Types, Variables, and Arrays: Java Is a Strongly Typed Language, The Primitive Types, Integers, Floating-Point Types, Characters, Booleans, ACloser Look at Literals, Variables, Type Conversion and Casting, Automatic Type Promotion in Expressions, Arrays, **Textbook 1:Ch 2,Ch 3.**

Module -2

Operators: Arithmetic Operators, The Bitwise Operators, Relational Operators, Boolean Logical Operators, The Assignment Operator, The? Operator, Operator Precedence, Using Parentheses, **Control Statements:** Java's Selection Statements, Iteration Statements, Jump Statements. **Textbook 1:Ch 4,Ch 5.**

Module -3

Introducing Classes: Class Fundamentals, Declaring Objects, Assigning Object Reference Variables, Introducing Methods, Constructors, The this Keyword, Garbage Collection, The finalize() Method.

A Closer Look at Methods and Classes: Overloading Methods, A Closer Look at Argument Passing, Returning Objects, Recursion, Introducing Access Control, Introducing final.

Inheritance: Inheritance, Using super, Creating a Multilevel Hierarchy, When Constructors Are Called, Method Overriding.

Textbook 1: Ch 6, Ch 7.1-7.9, Ch 8.1-8.5

Module -4

Packages and Interfaces:

Packages, Access Protection, Importing Packages, Interfaces, Exception Handling: Exception-Handling Fundamentals, Exception Types, Uncaught Exceptions, Using try and catch, Multiple catch Clauses, Nested try Statements, throw, throws, finally, Java"s Built-in Exceptions, Creating Your Own Exception Subclasses, Chained Exceptions, Using Exceptions.

Module -5

Type Wrappers, I/O, Applets, and Other Topics: I/O Basics, Reading Console Input, Writing Console Output, The PrintWriter Class, Reading and Writing Files, Applet Fundamentals-Example Program.

String Handling: The String Constructors, String Length, Special String Operations, Character Extraction, String Comparison, Searching Strings, Modifying a String, Data Conversion Using valueOf(), Changing the Case of Characters Within a String, Additional String Methods, StringBuffer, StringBuilder.

Text Books:

- 1. Herbert Schildt, Javathe Complete Reference, 7th Edition, Tata McGraw Hill, 2007. (Chapters 2, 3, 4, 5, 6,7, 8, 9,10, 12,13,15)
- 2. Cay S Horstmann, "Core Java Vol. 1 Fundamentals", Pearson Education, 10th Edition, 2016.

Reference Books:

- 1. Raoul-Gabriel Urma, Mario Fusco, Alan Mycroft, "Java 8 in Action", Dreamtech Press/Manning Press, 1st Edition, 2014.
- 2.Thinking in Java, Fourth Edition, by Bruce Eckel, Prentice Hall, 2006 (https://sd.blackball.lv/library/thinking in java 4th edition.pdf)

4. Syllabus Timeline

| S/L | Syllabus Timeline | Description |
|-----|---|--|
| 1 | Week1-2: An Overview of Java It involves understanding its fundamental aspects, core features. The knowled basic concepts such as variables, datatypes, programming structure and executive environment. Acquiring the knowledge of basic concepts of Java programming the knowledge of basic concepts of the knowledge of | |
| 2 | 2 Week 3-4: Operators It involves understanding and applying different types of operators. Use different operators to perform specific operations. | |
| 3 | Week 5-6: Understanding the design, implement, and utilize classes effectively. Encurrence the understanding of classes concept in programming. Ability to use the classes and object to solve related problems in Java. | |
| 4 | Week 7-8: Packages and Interfaces | It involves understanding purpose, usage, and interaction of packages and interfaces within Java applications. Knowledge of packages and interfaces. Involve a range of abilities related to designing, implementing java application using packages and interfaces. |

| 5 | | Involves understanding and effectively using basic concepts of Applets and string methods. Understanding the Applet viewer and different string methods to perform |
|---|------------------------------|--|
| | Applets, and Other Topics | specific operations. Involve effectively using Applets to build basic GUI application. |

5. Teaching-Learning Process Strategies

| _ | | |
|-----|---|---|
| S/L | TLP Strategies: | Description |
| 1 | Lecture Method | Utilize various teaching methods within the lecture format to reinforce competencies. |
| 2 | Video/Animation | Incorporate visual aids like videos/animations to enhance understanding of the concepts. |
| 3 | Collaborative Learning | Encourage collaborative learning for improved competency application. |
| 4 | Higher Order Thinking (HOTS) Questions: | Pose HOTS questions to stimulate critical thinking related to each competency. |
| 5 | Problem-Based Learning (PBL) | Implement PBL to enhance analytical skills and practical application of competencies |
| 6 | Pair Programming | Incorporate pair programming sessions where students collaborate in pairs to solve coding tasks or work on projects together. |
| 7 | Use of Tools and Resources | Familiarize students with IDEs like IntelliJ IDEA or Eclipse for coding and debugging. Apply Java concepts to practical problems and projects to demonstrate their utility. |
| 8 | Problem-Solving Sessions | Organize problem-solving sessions where students can work together to solve coding challenges and overcome programming obstacles |

6. Assessment Details (both CIE and SEE)

Theory Course with 3 Credits: Open Elective (OE)

This section of regulations is applicable to all theory-based courses. The minimum CIE marks requirement is 40% of maximum marks in each component.

CIE Split up for Open Elective (OE)

| | Components | Number | Weightage | Max. Marks | Min. Marks |
|------|-------------------------------|--------|-----------|------------|------------|
| (i) | Internal Assessment-Tests (A) | 2 | 50% | 25 | 10 |
| (ii) | Assignments/Quiz/Activity (B) | 2 | 50% | 25 | 10 |
| | Total Marks | | | | 20 |

Final CIE Marks = (A) + (B)

Average internal assessment shall be the average of the 2 test marks conducted.

Semester End Examinations:

Theory Course with 4,3 and 2 Credits: Professional Core Course (PC)/Professional Elective/Open Elective

- 1. Question paper pattern will be ten questions. Each question is set for 20marks. The medium of the question paper shall be English unless otherwise it is mentioned.
- 2. There shall be 2 question from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have mix of topics under that module if necessary.

- 3. The students have to answer 5 full questions selecting one full question from each module.
- 4. Marks scored will be proportionally scaled down to 50 marks

7. Learning Objectives

| S/L | Learning Objectives | Description |
|-----|--|---|
| 1 | Master Advanced Java Concepts | Ensuring that students gain a deep understanding of complex Java concepts, tools, and frameworks, enabling them to develop robust, scalable, and efficient applications |
| | Apply Object- Oriented Programming principles | Creating and manipulating classes and objects, and understand the role of constructors. Implementing and using inheritance to create hierarchical relationships between classes. Utilizing method overloading and overriding to achieve polymorphism. |
| | Understand Java's Execution Environment | Java code is compiled into bytecode and executed on the Java Virtual Machine (JVM). Understand basic concepts of memory management, including garbage collection. |
| 4 | Practical Application | Developing Practical Programming Skills. Designing and implementing the algorithms for common problems and tasks |

8. Course Outcomes (COs) and Mapping with POs/PSOs

Course Outcomes (COs)

| COs | Description |
|--------------|---|
| M23BCS604A.1 | Understanding the basic concepts of java to solve real time problems. |
| M23BCS604A.2 | Apply the object-oriented concepts of java and exception handling concepts to implement java program. |
| | Analyze I/O and String handling concept to develop an application program. |
| M23BCS604A.4 | Analyze and develop computer programs to solve real world problems in Java. |

CO-PO-PSO Mapping

| | - | _ | | | | | | | | | | | | |
|--------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|-------|-------|

Conditions for SEE Paper Setting:

Each module of SEE question paper should be allocated with questions for 20% of the total SEE marks **10. Future with this Subject**

The future of advanced Java development is poised to evolve with advancements in technology and shifts in software development practices.

- 1. Language Evolution: Ongoing updates and feature enhancements in recent versions improve performance, simplify syntax, and introduce new functionalities. This aims to simplify concurrency and scalability with lightweight, user-friendly fibers and continuations.
- 2. **Performance Improvements:** The Java Virtual Machine (JVM) continues to receive performance optimizations, improving execution speed and efficiency.
- 3. Integration with Emerging Technologies: Java is increasingly used in big data processing frameworks (like Apache Hadoop and Apache Spark) and artificial intelligence applications. Java's portability and robustness make it suitable for IoT applications and devices.
- 4. Educational and Enterprise Adoption: Java remains a primary language taught in computer science programs, ensuring a steady influx of new developers. Many large enterprises continue to rely on Java for mission-critical applications, ensuring its relevance in the business world.
- 5. Development Practices and Tools: Improved tools and practices for monitoring and managing the performance and health of Java applications in production environments. Advanced Integrated Development Environments (IDEs) and tools providing enhanced code assistance, debugging, and profiling capabilities.

| | Open Elective | |
|--------------------------|---------------------------------|------------|
| 6 th Semester | Introduction to Data Structures | M23BCS604B |

1. Prerequisites

| 1. | rrerequisites | |
|-----|---------------------------------------|---|
| S/L | Proficiency | Prerequisites |
| | | |
| 1 | Basic Programming Concepts | Variables and Data Types: Understanding different data types (int, float, char, etc.) and how to declare and use variables. Control Structures: Proficiency with loops (for, while, do-while) and conditional statements (if, else if, else, switch). Functions: Understanding how to define and use functions, including parameter passing, return types, and recursion. Pointers: Understanding pointers, pointer arithmetic, and how they relate to arrays and functions. Memory Management: Familiarity with dynamic memory allocation using malloc (), calloc (), realloc (), and free () functions. |
| 2 | Advanced C Programming Concepts | Structures: Ability to define and use structures to group different data types together. Unions and Enumerations: Understanding how to use unions and enumerations. File I/O: Basic knowledge of reading from and writing to files in C. Preprocessor Directives: Familiarity with macros, #define, #include, and conditional compilation. |
| 3 | Basic Algorithms | Sorting Algorithms: Understanding basic sorting algorithms like Bubble Sort, Selection Sort, and Insertion Sort. Searching Algorithms: Familiarity with searching techniques like Linear Search and Binary Search. |
| 4 | Mathematical Concepts | Discrete Mathematics: Basic understanding of sets, functions, relations, and combinatorics. |
| 5 | Problem-Solving Skills | Algorithm Design: Ability to design algorithms for solving problems using data structures. Debugging and Testing: Skills in debugging code and testing to ensure correctness and efficiency. |

2. Competencies

| S/L | Competency | KSA Description |
|-----|------------|-----------------|
|-----|------------|-----------------|

| 1 | In-Depth Understanding o Data Structures | |
|---|--|---|
| 2 | Problem- Solving Abilities | Knowledge (K) Complexity Analysis: Knowledge of time and space complexity analysis using Big O notation, with the ability to analyze the performance of data structure operations. Sorting and Searching Algorithms: Understanding of fundamental algorithms and their integration with data structures. Recursion and Iteration: Knowledge of recursive and iterative approaches to |
| | | solving problems, especially in tree and graph algorithms. Skills (S) Data Structure Selection: Ability to choose the most appropriate data structure for solving specific problems based on efficiency and complexity considerations. Debugging: Skill in identifying and fixing bugs related to pointers, memory allocation, and data structure operations in C code. Optimization: Ability to optimize data structures for performance, minimizing time and space complexity through efficient algorithms and code practices. Attitudes: Practical Application: Ability to apply knowledge of data structures in solving real-world programming challenges, particularly in system programming, embedded systems, and performance-critical applications. Scalability and Efficiency: Ability to design and implement data structures that scale efficiently with large datasets or under high-performance requirements |
| 3 | Errors and Handling the Errors | Knowledge: Understanding of issues with errors. Skills: Implementing how to handle the errors through appropriate C++ programming construct. Attitudes: Appreciation for the way error is handled and making the execution of program in control. |
| 4 | Reusability of Classes and Methods | Knowledge: Understanding the importance of code reusability through classes and methods reusability. Skills: Applying concepts of object orientation with classes and methods. Describing the actually importance of reusability through implementations. Attitudes: Openness to learning and using object orientation concepts to achieve code reusability. |

3. Syllabus

| Intro | oduction to Data Structures SEME – VI | ESTER | |
|-------------------------------------|--|-------|--|
| Course Code M23BCS604B CIE Marks 50 | | | |

| Number of Lecture Hours/Week (L: T: P: S) | (3:0:0:0) | SEE Marks | 50 |
|---|-----------|-------------|-----|
| Total Number of Lecture Hours | 40 Hours | Total Marks | 100 |
| Credits | 03 | Exam Hours | 03 |

Course Learning Objectives

- 1. Introduce elementary data structures.
- 2. Analyze Linear Data Structures: Stack, Queues, Lists
- 3. Analyze Non Linear Data Structures: Trees
- 4. Assess appropriate data structure during program development/Problem Solving.

Module -1

Introduction:

Introduction to arrays: one-dimensional arrays, two dimensional arrays, initializing two dimensional arrays, Multidimensional arrays.

Introduction to Pointers: Pointer concepts, accessing variables through pointers, Dynamic memory allocation, pointers applications.

Introduction to structures and unions: Declaring structures, Giving values to members, structure initialization, arrays of structures, nested structure, unions, sizeof() structures.

Textbook 1: Ch 8.3 to 8.15,Ch 12.3 to 12.19 Textbook 2:Ch 2.1 to 2.13,2.51, 2.80 to 2.98

Module -2

Linear Data Structures-Stacks and queues:

Introduction, Stack representation in Memory, Stack Operations, Stack Implementation, Applications of Stack. Introduction, Queues-Basic concept, Logical representation of Queues, Queue Operations and its types, Queue Implementation, Applications of Queue.

Textbook 2: Ch 6.1 to 6.14, Ch 8.1, 8.2

Module -3

Linear Data Structures-Linked List:

Introduction, Linked list Basic concept, Logical representation of Linked list, Self-Referential structure, Singlylinked List Operations and Implementation, Circular Linked List, applications of Linked list. **Textbook 1: Ch 15.1**, **15.3**, **15.4**, **15.8**

Textbook 2: Ch 9.2.9.5

Module -4

Non Linear Data Structures – Trees

Introduction, Basic concept, Binary Tree and its types, Binary Tree Representation, Binary Tree Traversal, and Binary Search tree, Expression Trees. **Textbook1: Ch 16.1,16.2**

Textbook2:Ch 10.1,10.2,10.4,10.6.3

Module -5

Sorting and Searching

Sorting: Introduction, Bubble sort, Selection sort, Insertion sort Searching:

Introduction, Linear search, Binary search.

Textbook1: Ch 17.1,17.2.2, 17.2.4, 17.3.1,17.3.2 Textbook2: Ch 11.1,11.2,11.3,11.7,11.10.1,11.10.2

Textbooks

- 1. C Programming and data structures, E Balaguruswamy 4th Edition, 2007, McGraw Hill
- $2.\ Systematic\ approach\ to\ Data structures\ using\ C, A\ M\ Padma\ Reddy, 7th Edition\ 2007, Sri\ Nandi\ Publications.$

4. Syllabus Timeline

| 4. | Synabus Timenne | |
|-----|---|---|
| S/L | Syllabus Timeline | Description |
| 1 | Week1-2: Introduction to arrays, Introduction to Pointers | Introduction to arrays: one-dimensional arrays, two dimensional arrays, initializing two dimensional arrays, Multidimensional arrays. Introduction to Pointers: Pointer concepts, accessing variables through pointers, Dynamic memory allocation, pointers applications. Introduction to structures and unions: Declaring structures, Giving values to members, structure initialization, arrays of structures, nested structure, unions, sizeof() structures. |
| 2 | Week 3-4: Stack and Queues | Introduction, Stack representation in Memory, Stack Operations, Stack Implementation, Applications of Stack. Introduction, Queues-Basic concept, Logical representation of Queues, Queue Operations and its types, Queue Implementation, Applications of Queue. |
| 3 | Week 5-6: Linear Data StructuresLinked List: | Introduction, Linked list Basic concept, Logical representation of Linked list, Self-Referential structure, Singly-linked List Operations and Implementation, Circular Linked List, applications of Linked list. |
| 4 | Week 7-8: Non Linear Data Structures – Trees | Introduction, Basic concept, Binary Tree and its types, Binary Tree Representation, Binary Tree Traversal, Binary Search tree, Expression Trees. |
| 5 | Week 9-10: Sorting and Searching | Sorting: Introduction, Bubble sort, Selection sort, Insertion sort Searching: Introduction, Linear search, Binary search. |

5. Teaching-Learning Process Strategies

| S/L | TLP Strategies: | Description |
|-----|-------------------------------------|---|
| 1 | Foundation in C Programming | Prerequisite Knowledge: Ensure students have a solid understanding of C programming basics, including pointers, memory allocation, and structures (struct). Review Pointers and Memory Management: Since data structures in C heavily rely on pointers, start with a review of pointer operations and dynamic memory allocation using malloc(), calloc(), realloc(), and free(). |
| 2 | Begin with Basic Data Structures | Arrays and Strings: Start with arrays as the simplest form of data structure in C. Teach how strings are handled as arrays of characters, and introduce basic string manipulation functions. Structures (struct): Introduce the concept of structures to group different data types, laying the groundwork for more complex data structures like |
| | | linked lists and trees. |

2023Scheme - 5^{th} to 6^{th} Sem Competency Based Syllabi for B.E in CS(DS)

| 3 | Introduce Linked Lists | Singly Linked List: Begin with singly linked lists, covering concepts like nodes, head pointers, and traversal. Emphasize how pointers are used to link nodes. Implementation: Guide students through coding linked list operations such as insertion, deletion, and traversal. Debugging Practice: Since pointer errors are common, provide debugging exercises to help students develop problem-solving skills. |
|---|------------------------------------|---|
| 4 | Stack and Queue Implementations | Stack Using Arrays and Linked Lists: Teach how to implement stacks using both arrays and linked lists. Discuss the advantages and disadvantages of each approach. Queue Implementation: Similar to stacks, introduce queues with both arraybased and linked-list-based implementations. Explain the differences between simple queues, circular queues, and priority queues. |
| 5 | Dynamic Memory Management | Memory Allocation for Data Structures : Use examples to show how to allocate and deallocate memory for data structures dynamically. Discuss memory leaks and best practices for managing memory in C. |
| 6 | Advanced Data Structures | Trees: Introduce binary trees and binary search trees, focusing on recursive implementations of tree operations. Explain traversal methods (in-order, preorder, post-order) and their applications. Graphs: Teach basic graph representations using adjacency matrices and adjacency lists. Discuss graph traversal algorithms (BFS and DFS) and their implementation in C. Hash Tables: Explain the concept of hashing and collision resolution techniques. Implement a simple hash table using arrays and linked lists. |

6. Assessment Details (both CIE and SEE)

Theory Course with 3 Credits: Open Elective (OE)

This section of regulations is applicable to all theory-based courses. The minimum CIE marks requirement is 40% of maximum marks in each component.

CIE Split up for Open Elective (OE)

| | Components | Number | Weightage | Max. Marks | Min. Marks |
|------|-------------------------------|--------|-----------|---------------|------------|
| (i) | Internal Assessment-Tests (A) | 2 | 50% | 25 | 10 |
| (ii) | Assignments/Quiz/Activity (B) | 2 | 50% | 25 | 10 |
| | Total Marks | | | 50 | 20 |

| S/L | Learning Objectives | Description |
|-----|---------------------|-------------|
|-----|---------------------|-------------|

| 1 | Understanding Basic Concepts of Data Structures | Definition and Types: Understand what a data structure is and the different types (e.g., linear and non-linear). Efficiency: Learn the importance of data structures in terms of time and space complexity. Data Structure Operations: Master the basic operations (insertion, deletion, traversal, searching, and sorting) on various data structures. |
|---|---|---|
|---|---|---|

Final CIE Marks = (A) + (B) Average

internal assessment shall be the average of the 2 test marks conducted.

Semester End Examinations:

Theory Course with 4, 3 and 2 Credits: Professional Core Course (PC)/Professional Elective/Open Elective

- 1. Question paper pattern will be ten questions. Each question is set for 20marks. The medium of the question paper shall be English unless otherwise it is mentioned.
- 2. There shall be 2 question from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have mix of topics under that module if necessary.
- 3. The students have to answer 5 full questions selecting one full question from each module.
- 4. Marks scored will be proportionally scaled down to 50 marks

7. Learning Objectives

| 2 | Mastering Linear Data Structures | Arrays: Learn how to use arrays, including dynamic arrays, and understand their memory management. Linked Lists: Understand the implementation of singly linked lists, doubly linked lists, and circular linked lists. Stacks: Study stack operations (push, pop, peek) and their implementation using arrays or linked lists. Queues: Understand queues, including circular queues, and their implementation using arrays or linked lists. |
|---|---|--|
| 3 | Understanding NonLinear Data Structures | Trees : Learn about binary trees, binary search trees (BST), AVL trees, and heap trees. Understand tree traversal methods (in-order, pre-order, post-order). Graphs : Understand the representation of graphs using adjacency matrices and lists. Study graph traversal techniques (BFS and DFS). Hash Tables : Learn about hashing, hash functions, and collision resolution techniques. |
| 4 | Practical Implementation Skills | C Programming: Enhance C programming skills, particularly in relation to implementing data structures from scratch. Problem Solving: Apply data structures to solve real-world problems, understanding when and how to use each type of structure. Debugging and Optimization: Learn to debug code effectively and optimize data structures for performance. |

8.Course Outcomes (COs) and Mapping with POs/ PSOs Course Outcomes (COs)

| Cos | Description |
|--------------|--|
| | Apply basic concepts of data structures and linear data structure to solve computational problems. |
| M23BCS604B.2 | Apply dynamic memory management techniques using pointers and implement complex data structures. |
| M23BCS604B.3 | Analyze non-linear data structures like trees and graphs. |
| M23BCS604B.4 | Analyze various algorithms for sorting, searching, and other data operations. |

| | COs/POs | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 | PSO1 | |

M23BCS604B Explanation:

3

3

CO-PO-PSO Mapping

CO1 and CO2 primarily maps to PO1 because it involves applying foundational knowledge to solve problems. CO3 and CO4 relate PO2, as they require students to analyze various data structures, which aligns with problem-solving.

CO1 to CO4 maps to PO5 because student use modern tools (such as C programming language).

3

3

3

9. Assessment Plan

Continuous Internal Evaluation (CIE)

| | CO1 | CO2 | CO3 | CO4 | Total |

Each module of SEE question paper should be allocated with questions for 20% of the total SEE marks

10. Future with this Subject

Foundation for Advanced Computer Science Concepts

- Algorithms: Data structures are the building blocks for designing and analyzing algorithms. A solid understanding of data structures in C prepares you for more advanced topics like algorithm design, complexity analysis, and optimization.
- **Systems Programming**: C is often used in system-level programming (e.g., operating systems, embedded systems). Understanding data structures is crucial for writing efficient and highperformance system code.
- Artificial Intelligence and Machine Learning: Efficient data management using appropriate structures is key in AI/ML for handling large datasets and implementing algorithms.
- Career Opportunities
- **Software Development**: Knowledge of data structures is essential for software engineers, as it directly impacts the efficiency and performance of software applications. Companies like Google, Microsoft, and Amazon highly value this skill.
- **System Architect or Engineer**: In roles that involve designing large-scale systems (e.g., distributed systems, databases), data structures are vital for ensuring scalability and performance.
- **Embedded Systems Engineer**: C is the language of choice for embedded systems, where efficient data structures are crucial due to limited resources.
- **Database Administrator/Developer**: Understanding data structures helps in optimizing database queries, designing indexing strategies, and improving overall database performance.
- **Game Development**: Game developers use data structures extensively for managing game states, rendering graphics, and handling user input in real-time.

| 6th Semester | Open Elective –I(OE) Introduction to DBMS | M23BCS604C |
|--------------|---|------------|
|--------------|---|------------|

1. Prerequisites

| S/L | Proficiency | Prerequisites |
|-----|--|---|
| 1 | Basic Computer Literacy | A solid understanding of how computers work, file management, and using software applications is essential. |
| 2 | Fundamentals of Data and Information | Familiarize yourself with the concepts of data, information, and knowledge. Understand the differences between structured and unstructured data. |
| 3 | Basic Programming Concepts | While not mandatory, a familiarity with programming concepts can be helpful, especially if you intend to work with databases in a software development context. |
| 4 | Operating System Concepts | Familiarity with concepts like file systems, memory management, and process scheduling can help you understand how a DBMS interacts with the underlying operating system. |
| 5 | Problem- Solving Skills | Develop your analytical and problem-solving skills, as designing efficient and effective databases often requires making trade-offs and optimizing for different scenarios. |

2. Competencies

| S/L | Competency | KSA Description | |
|--|-----------------------------------|--|--|
| 1 Data Modeling Skills: Entity-Relationship di | | Knowledge: Understand the principles of data modeling. Skills: Entity-Relationship diagrams (ERDs), Attitudes: These concepts help design efficient and organized database. | |
| 2 | Relational Algebra and Set Theory | Knowledge: Gain basic knowledge of relational algebra and set theory Skills: The knowledge used to interact with relational databases. Attitudes: The foundation of relational databases. | |

| 3 | SQL (Structured Query Language): | Knowledge: the basics of SQL, the standard language for data query. Skills: Writing queries to retrieve, update, and manipulate data. Attitudes: Acquired skill to be used for querying with relational databases. |
|---|----------------------------------|--|
| 4 | Normalization | Knowledge: Learn about database normalization. Skills: To eliminate redundancy and improve data integrity. Attitudes: Understand the concept of normalization for optimizing query performance. |
| 5 | DataBase applications | Knowledge: Gain insight into query optimization strategies. Skills: To design data base structure for a particular application. Attitudes: To enhance database performance. |

3. Syllabus

| Introduction DBMS SEMESTER – VI | | | |
|--|------------|-----------------|--|
| Course Code | M23BCS604C | CIE Marks 50 | |
| Number of Lecture Hours/Week(L: T: P: S) | (3:0:0:0) | SEE Marks 50 | |
| Total Number of Lecture Hours | 40 Hours | Total Marks 100 | |
| Credits | 03 | Exam Hours 03 | |

Course objectives:

- 1. To provide a strong foundation in database concepts, technology, and practice.
- 2. To practice SQL programming through a variety of database problems.
- 3. To understand the relational database design principles.
- 4. To demonstrate the use of concurrency and transactions in database.
- 5. To design and build database application for real world problems.
- 6. To become familiar with database storage structures and access techniques.

Module -1

Introduction to DBMS and Database Design

8 hours

Introduction to Databases: Introduction, Characteristics of database approach, Advantages of using the DBMS approach, History of database applications.

Overview of Database Languages and Architectures: Data Models, Schemas, and Instances. Three schema architecture and data independence, database languages, and interfaces. The Database System environment. Conceptual Data Modeling using Entities and Relationships: Entity types, Entity sets, attributes, roles, and structural constraints, Weak entity types, ER diagrams, examples, Specialization and Generalization. **Text-1: CH-1.1-1.8**, **2.1-2.6**, **3.1-310**

Module -2

Relational Models 8hours

Relational Model: Relational Model Concepts, Relational Model Constraints and relational database schemas, Update operations, transactions, and dealing with constraint violations.

Relational Algebra and Calculus: Unary and Binary relational operations, additional relational operations (aggregate, grouping, etc.) Examples of Queries in relational algebra, Tuple relational calculus, Domain relational calculus. Mapping Conceptual Design into a Logical Design: Relational Database Design using ER-to-Relational mapping.

Text-1: CH-5.1-5.3,8.1-8.7,9.1

Module -3

SOL 8 hours

SQL: SQL data definition and data types, Schema change statements in SQL, specifying constraints in SQL, retrieval queries in SQL, INSERT, DELETE, and UPDATE statements in SQL, Additional features of SQL: Advanced Queries: More complex SQL retrieval queries, Specifying constraints as assertions and action triggers, Views in SQL.

Text-1 CH-6.1-6.5,7.1-7.4

Module -4

Functional dependencies:

8 hours

Database Design Theory – Introduction to Normalization using Functional and Multivalued Dependencies: Informal design guidelines for relation schema, Functional Dependencies, Text-1: CH-14.1-14.3

Module -5

Normalization:

Normal Forms based on Primary Keys, Second and Third Normal Forms, Boyce-Codd Normal Form, Multivalued Dependency and Fourth Normal Form, Join Dependencies and Fifth Normal Form. **Text-1:CH-14.4-14.7**

Text Books:

- 1. Fundamentals of Database Systems, Ramez Elmasri and Shamkant B. Navathe, 7th Edition, 2017, Pearson.
- 2. Raghu Ramakrishnan and Johannes Gehrke, Database Management Systems, McGraw-Hill, 3rd Edition.

Reference Books:

- 1. Data base System Concepts, Silberschatz, Korth, McGraw hill, Sixth Edition
- 2. An Introduction to Database systems, C.J. Date, A.Kannan, S.Swami Nadhan, Pearson, Eight Edition

4. Syllabus Timeline

| S/L | Syllabus Timeline | Description |
|-----|-------------------|---|
| 1 | Week 1-3 | Knowledge: Understand the principles of data modeling Skills: Entity-Relationship diagrams (ERDs). These concepts help design efficient and organized database. |
| 2 | Week 4-6 | Knowledge: Gain basic knowledge of relational algebra and set theory. |

| | | Skills: The knowledge used to interact with relational databases and the foundation of relational databases. |
|---|------------|--|
| 3 | Week 7-9 | Knowledge: The basics of SQL, the standard language for data query. Skills: Writing queries to retrieve, update, and manipulate data. |
| 4 | Week 10-12 | Knowledge: Learn about database normalization to eliminate redundancy and improve data integrity. Skills: Understand the concept of normalization for optimizing query performance. |
| 5 | Week 13-15 | Knowledge: Gain sight into query optimization strategies to enhance database performance. Skills: To design data base structure for a particular application. |

5. Teaching-Learning Process Strategies

| J | 5. Teaching-Learning Frocess Strategies | | | | | | | |
|-----|---|--|--|--|--|--|--|--|
| S/L | TLP Strategies: | Description | | | | | | |
| 1 | Lecture Method | Using traditional lecture methods and ICT as and when needed. | | | | | | |
| 2 | Video/Animation | • Incorporate visual aids like videos/animations to enhance learning. | | | | | | |
| 3 | Collaborative Learning | Encourage collaborative learning approaches for peer learning. | | | | | | |
| 4 | Problem-Based Learning (PBL) | • Implement PBL to enhance analytical skills and practical application. | | | | | | |
| 5 | Real-World Application | Discuss practical applications to connect theoretical concepts with realworld competencies. | | | | | | |
| 6 | Programming Assignments | Assign programming tasks to reinforce practical skills associated with competencies. | | | | | | |

6. Assessment Details (both CIE and SEE)

The minimum CIE marks requirement is 40% of maximum marks in each component. CIE

Split up for Open Elective (OE)

| | Components | Number | Weightage | Max. Marks | Min. Marks |
|------|-------------------------------|--------|-----------|------------|------------|
| (i) | Internal Assessment-Tests (A) | | 50% | 25 | 10 |
| (ii) | Assignments/Quiz/Activity (B) | 2 | 50% | 25 | 10 |
| | Total Marl | 50 | 20 | | |

Final CIE Marks = (A) + (B) Average

internal assessment shall be the average of the 2 test marks conducted.

Semester End Examinations:

- 1. Question paper pattern will be ten questions. Each question is set for 20marks. The medium of the question paper shall be English unless otherwise it is mentioned.
- 2. There shall be 2 question from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have mix of topics under that module if necessary.
- 3. The students have to answer 5 full questions selecting one full question from each module.
- 4. Marks scored will be proportionally scaled down to 50 marks

7. Learning Objectives

| S/L | Learning Objectives | | | |
|-----|--|--|--|--|
| 1 | To provide a strong foundation in database concepts, technology, and practice. | | | |
| 2 | To practice SQL programming through a variety of database problems. | | | |
| 3 | To understand the relational database design principles. | | | |
| 4 | To design and build database application for real world problems. | | | |
| 5 | To become familiar with database storage structures and access techniques. | | | |

8. Course Outcomes (COs) and Mapping with POs/ PSOs Course Outcomes (COs):

| Cos | Description |
|--------------|--|
| M23BCS604C.1 | Understand and apply the basic elements of a relational database management system. |
| M23BCS604C.2 | Apply various constraints, techniques and Structured Query Language (SQL) statement for database operations. |
| M23BCS604C.3 | Analyze various database models and normalization for the given application. |
| M23BCS604C.4 | Design and develop entity relationship model and database application. |

CO-PO-PSO Mapping:

| COs/POs | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 | PSO1 | PSO2 |
|--------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|------|------|
| M23BCS604C.1 | 3 | - | - | 1 | ı | 1 | 1 | 1 | - | - | - | - | 3 | 1 |
| M23BCS604C.2 | 3 | - | - | ı | 2 | ı | 1 | ı | 1 | - | ı | - | 3 | 3 |
| M23BCS604C.3 | - | 3 | - | - | - | 1 | 1 | 1 | - | - | 1 | - | - | 3 |
| M23BCS604C.4 | - | - | 3 | - | - | - | - | - | - | - | - | - | - | 3 |
| M23BCS604C | 3 | 3 | 3 | | 2 | | | | | | | | 3 | 3 |

9. Assessment Plan

| Continuous Internal Evaluation | CO1 | CO2 | CO3 | CO4 | Total |
|-----------------------------------|-----|-----|-----|-----|-------|
| Module 1 | 10 | | | | 10 |
| Module 2 | | 10 | | | 10 |
| Module 3 | | | 10 | | 10 |
| Module 4 | | | | 10 | 10 |
| Module 5 | | | | 10 | 10 |
| Total | 10 | 10 | 10 | 20 | 50 |

Semester End Examination (SEE)

| | CO1 | CO2 | CO3 | CO4 | Total |
|----------|-----|-----|-----|-----|-------|
| Module 1 | 20 | | | | 20 |
| Module 2 | | 20 | | | 20 |
| Module 3 | | | 20 | | 20 |
| Module 4 | | | | 20 | 20 |
| Module 5 | | | | 20 | 20 |
| Total | 20 | 20 | 20 | 40 | 100 |

Conditions for SEE Paper Setting:

Each module of SEE question paper should be allocated with questions for 20% of the total SEE mark 10. Future with this Subject:

- Data Organization and Storage: Companies can store their data in databases in a structured, organized manner, making it simpler to access and analyze.
- Data Analysis: Databases contain a lot of data, and with the correct tools, organizations can analyze that data to find insights that will help them make business decisions and strategies.
- Efficiency: Databases give companies a centralized area to keep their data, making it more straightforward for staff to retrieve the data they want, minimizing duplication of work and boosting efficiency.
- Security & Privacy: Databases let companies control who has access to their data, ensuring that only authorized users may see and change it. This aids in preventing unauthorized access to and breaches of vital consumer and corporate information.
- This course is the foundation for many other courses to follow such as cloud storage, distributed data storage, block chain, Big data, Quantum computing etc.,

|--|--------------|--|------------|
|--|--------------|--|------------|

1. Prerequisites

| S/L | Proficiency | Prerequisites |
|-----|--------------------------------|--|
| 1 | Basic programming skills | Understanding of programming concepts and experience in a programming language such as C, C++, Java, or Python. |
| 2 | Computer architecture | Basic understanding of computer organization and architecture, including concepts like memory hierarchy, CPU operations, and input/output systems. |
| 3 | Data structures and algorithms | Familiarity with fundamental data structures (arrays, linked lists, trees, etc.) and algorithms (sorting, searching, etc.). |

2023Scheme - 5^{th} to 6^{th} Sem Competency Based Syllabi for B.E in CS(DS)

| 4 | Computer Organization | Knowledge of how hardware components interact at a low level is helpful. This includes concepts like machine instructions, addressing modes, memory management, and I/O operations. |
|---|--------------------------|---|
| 5 | Databases | Basic understanding of databases and file management systems is helpful as operating systems often interact with databases for storing and retrieving data. |

2. Competencies

| S/L | Competency | KSA Description |
|-----|-------------------------------------|--|
| 1 | Operating System Fundamentals | Knowledge: Understanding of different operating system architectures (e.g., monolithic, microkernel, hybrid). Familiarity with system calls, file systems, memory management, process scheduling, and input/output subsystems. Skills: Ability to configure and install various operating systems (e.g., Windows, Linux, macOS, UNIX). Proficiency in troubleshooting OS-related issues. Attitudes: Ability to explain the core components of an operating system and how they interact, diagnose common OS-related performance issues, and optimize the OS for better resource utilization. |
| 2 | System Administration | Knowledge: Understanding of system administration tasks such as user management, system security, backup, software installation, and system configuration. Skills: Proficiency in managing user accounts, configuring system services, managing file systems, applying patches, and performing system backups. Attitudes: Ability to perform routine administrative tasks, automate repetitive tasks through scripts, and ensure that the operating system is secure and running efficiently. |
| 3 | File System Management | Knowledge: Understanding of different types of file systems (e.g., NTFS, ext4, APFS, FAT32). Knowledge of file system structures, data storage, permissions, and disk management tools. Skills: Ability to create, mount, and manage file systems. Proficiency in handling disk partitions, optimizing file system performance, and resolving file system related issues. Attitudes: Ability to recover data from damaged or corrupted file systems, implement proper file access permissions, and ensure data integrity in an OS. |
| 4 | Memory Management | Knowledge: Understanding of memory hierarchy, paging, segmentation, and virtual memory. Knowledge of memory allocation techniques and OS strategies to handle memory (e.g., paging, swapping). Skills: Ability to monitor and troubleshoot memory usage in the operating system, such as detecting memory leaks, managing memory usage, and optimizing virtual memory. Attitudes: Ability to design efficient memory management techniques for both |

| | | hardware and software, ensure that system memory is allocated properly, and minimize the occurrence of out-of-memory errors. |
|---|-----------------------|---|
| 5 | Process Management | Knowledge: Understanding of how processes are created, scheduled, and terminated. Familiarity with multithreading, multitasking, process synchronization, and inter-process communication (IPC). Skills: Ability to manage processes using command-line tools or GUI utilities. Proficiency in using OS utilities to track process states and system resource consumption. Attitudes: Ability to implement and manage process scheduling strategies, optimize resource allocation, and troubleshoot process deadlocks or race conditions. |

3. Syllabus

| Introduction to | Introduction to Operating system SEMESTER – VI | | | | | | | |
|--|---|-------------|-----|--|--|--|--|--|
| Course Code | M23BCS604D | CIE Marks | 50 | | | | | |
| Number of Lecture Hours/Week(L: T: P: S) | (3:0:0:0) | SEE Marks | 50 | | | | | |
| Total Number of Lecture Hours | 40 Hours | Total Marks | 100 | | | | | |
| Credits | 03 | Exam Hours | 03 | | | | | |

Course objectives: This course will enable students to:

- 1. Basic Understanding of Computer System Structure and Operating Systems Structure
- 2. Analyze the main tasks carried out by the operating systems Process and thread management, CPU scheduling algorithms, memory management and deadlocks.
- 3. To demonstrate different APIs/Commands related to processor, memory, storage and file system management.

Module -1

Introduction to operating systems: What operating systems do; Computer System organization; Computer System architecture; Operating System operations(dual-mode and multi-mode); computing environments; System structures: Operating system services; User - Operating System interface; System calls; Types of system calls; operating system

textbook 1- chapter 1(1.1,1.2,1.3,1.5,1.11) chapter 2 (2.1,2.2,2.3,2.4,2.7)

Module -2

Process management: Process Concept; Process Scheduling; Operation on Process; Inter-Process Communication. Multithreaded Programming: Overview; Multicore Programming, multithreading models, thread libraries, threading issues. Process scheduling - Basic Concepts, CPU I/O Burst Cycle; CPU Scheduler - Pre-emptive Scheduling, Dispatcher; Scheduling Criteria; Scheduling Algorithms – FCFS, SJF, Round-Robin, Priority. textbook 1-chapter 3(3.1,3.2,3.3,3.4)chapter 4(4.1,4.2,4.3,4.4,4.6)chapter 6(6.1,6.2,6.3)

Module -3

Process Synchronization: Synchronization: The critical section problem; Peterson's solution; Synchronization hardware; Mutex locks; Semaphores; Classical problems of synchronization; Deadlocks: System model; Deadlock characterization; Methods for handling deadlocks; Deadlock prevention; Deadlock avoidance; Deadlock detection and recovery from deadlock.

textbook 1-chapter 5(5.1,5.2,5.3,5.4,5.5,5.6,5.7) chapter 7(7.1-7.7)

Module -4

Memory Management: Background; Swapping; Contiguous memory allocation; Segmentation; Paging; Structure of page table; Virtual Memory Management: Background; Demand paging; Page replacement; Allocation of frames; Thrashing.

textbook 1-chapter 8(8.1-8.6) chapter 9(9.1,9.2,9.4,9.5,9.6)

Module -5

File System, Implementation of File System: File concept; Access methods; Directory and Disk structure; File system mounting; File sharing; Implementing File system: File system structure; File system implementation; Allocation methods; Free space management. Storage management: overview of Mass storage structures; Disk structure; Disk attachment; Disk scheduling;

textbook 1-chapter 11(11.1-11.5)chapter 12(12.1-12.5)chapter 10(10.1-10.4)

Text Books:

1. Abraham Silberschatz, Peter Baer Galvin, Greg Gagne, Operating System Concepts 9th edition, Wiley-India,

2018

4. Syllabus Timeline

| S/L | Syllabus Timeline | Description |
|-----|---|---|
| 1 | Week 1-2: Introduction to operating systems | Competency: Understanding of Operating System Concepts Knowledge: how operating systems manage hardware resources efficiently. Skills: Understanding of basic operating system functions and objectives, knowledge of operating system history and evolution. |
| 2 | Week 3-4: Process management | Competency: Problem-solving Skills Knowledge: develop skills in breaking down problems and designing efficient solutions. Skills: Proficiency in evaluating CPU scheduling algorithms, ability to analyze performance metrics. |
| 3 | Week 5-6: Process Synchronization and deadlocks | Competency: Concurrency and Parallelism Knowledge: to design and implement concurrent programs that utilize multiple threads or processes. Skills: Understanding process and thread concepts, synchronization mechanisms. |
| 4 | Week 7-8: Memory Management | Competency: Memory Management Knowledge: how operating systems manage memory resources efficiently to support multiple processes. Skills: Understanding of virtual memory concepts, familiarity with memory allocation strategies. |
| 5 | Week 9-10: File System, Implementation of File System and storage management | Competency: File Systems Knowledge: how operating systems manage storage devices and provide a unified interface for file management Skills: Proficiency in file system organization and implementation, knowledge of disk management techniques. |

| 6 | | Apply learned concepts and competencies to real-world scenarios. Hands-on practice with programming assignments |
|---|--|--|
|---|--|--|

5. Teaching-Learning Process Strategies

| S/L | TLP Strategies: | Description |
|-----|---|---|
| 1 | Lecture Method | Utilize various teaching methods within the lecture format to reinforce competencies. |
| 2 | Video/Animation | Incorporate visual aids like videos/animations to enhance understanding of the concepts. |
| 3 | Collaborative Learning | Encourage collaborative learning for improved competency application. |
| 4 | Higher Order Thinking (HOTS) Questions: | Pose HOTS questions to stimulate critical thinking related to each competency. |
| 5 | Problem-Based Learning (PBL) | Implement PBL to enhance analytical skills and practical application of competencies |
| 6 | Multiple Representations | Introduce topics in various representations to reinforce competencies |
| 7 | Real-World Application | Discuss practical applications to connect theoretical concepts with real-world competencies. |
| 8 | Flipped Class Technique | Utilize a flipped class approach, providing materials before class to facilitate deeper understanding of competencies |
| 9 | Programming Assignments | Assign programming tasks to reinforce practical skills associated with competencies. |

6 .Assessment Details (both CIE and SEE)

The minimum CIE marks requirement is 40% of maximum marks in each component.

CIE Split up for Open Elective (OE)

| | Components | Number | Weightage | Max. Marks | Min. Marks |
|------|-------------------------------|--------|-----------|---------------|---------------|
| (i) | Internal Assessment-Tests (A) | 2 | 50% | 25 | 10 |
| (ii) | Assignments/Quiz/Activity (B) | 2 | 50% | 25 | 10 |
| | Total Mark | 50 | 20 | | |

Final CIE Marks = (A) + (B) Average

internal assessment shall be the average of the 2 test marks conducted.

Semester End Examinations:

- $1. \,Question\,paper\,pattern\,will\,be\,ten\,questions.\,Each\,question\,is\,set\,for\,20 marks.\,The\,medium\,of\,the\,question\,paper\,shall\,be\,English\,unless\,otherwise\,it\,is\,mentioned.$
- 2. There shall be 2 question from each module, each of the two questions under a module (with a maximum of 3 sub questions), may have mix of topics under that module if necessary.
- 3. The students have to answer 5 full questions selecting one full question from each module.
- 4. Marks scored will be proportionally scaled down to 50 marks 7. Learning Objectives

| | | | | | | 8 | |
|-----|---------------------|-----|-----|--------|--|---|--|
| S/L | Learning Objectives | Des | cri | iption | | | |

| 1 | Understanding Operating System Fundamentals | Students should grasp the basic concepts, components, and functions of an operating system, including process management, memory management, file systems, and device management. |
|---|---|---|
| 2 | Process Management | Learning how processes are created, scheduled, and managed by the operating system, including topics such as process synchronization, inter-process communication, and deadlock handling. |
| 3 | Concurrency and Synchronization | Learning about concurrent processes, critical sections, mutual exclusion, synchronization primitives, and techniques for ensuring thread safety and avoiding race conditions. |
| 4 | Memory Management | Understanding memory hierarchy, virtual memory, memory allocation strategies, and techniques for efficient memory usage, including paging, segmentation, and memory protection. |
| 5 | File Systems | Exploring file system organization, file operations, directory structures, file system implementation, and techniques for improving file system performance and reliability. |

8. Course Outcomes (Cos) and Mapping with Pos/ PSOs

Course Outcomes (Cos)

| Cos | Description |
|--------------|---|
| M23BCS604D.1 | Understand the fundamental concepts and principles of operating systems. |
| M23BCS604D.2 | Analyze various inter-process communication, multiprogramming mechanisms and apply different process scheduling algorithms. |
| M23BCS604D.3 | Examine multiple mechanisms for managing deadlock situations and Implement both software and hardware solutions to address the critical-section problem |
| M23BCS604D.4 | Implement and evaluate memory management techniques. |
| M23BCS604D.5 | Examine the structure of file systems and the organization of secondary storage devices |

| Total | 20 | 20 | 20 | 20 | 20 | 100 | | | | |

Conditions for SEE Paper Setting:

Each module of SEE question paper should be allocated with questions for 20% of the total SEE marks.

10. Future with this Subject

The future with operating systems is likely to involve several key trends and developments:

- Continued Integration of AI: Operating systems will increasingly integrate AI and machine learning algorithms to provide more personalized and adaptive user experiences. This could involve features like predictive behavior, context-awareness, and intelligent automation.
- Enhanced Security: With cyber threats evolving rapidly, future operating systems will place even greater emphasis on security. This might include built-in encryption, advanced authentication methods like biometrics, and more robust intrusion detection systems.
- Interconnectivity and IoT: As the Internet of Things (IoT) expands, operating systems will need to seamlessly integrate with a wide range of devices and platforms. This could lead to more standardized communication protocols and frameworks for managing diverse IoT ecosystems.

| 6 th Semester | Project Work (PW) | M23BCD605 |
|--------------------------|----------------------|------------|
| 0 Schiester | MAJOR PROJECT PHASEI | WIZSBCLOUS |

1. Prerequisites

| S/L | Proficiency | Prerequisites |
|-----|---------------------------------------|--|
| 1 | Understanding Research Methodology | Basic understanding of research methods, gained from prior courses in engineering mathematics and introductory project work. |
| 2 | Conducting a Literature Survey | Familiarity with academic databases, journals, and research papers; understanding of the subject matter from core courses. |
| 3 | Defining a Problem Statement | Critical thinking and analytical skills, developed through previous coursework in related engineering disciplines. |
| 4 | Multidisciplinary Collaboration | Basic knowledge of related disciplines (e.g., Mechanical students should have a basic understanding of Electronics, etc.). |
| 5 | Technical Communication | Writing technical reports and presenting technical content |

2. Competencies

| S/L | Competency | KSA Description |
|-----|----------------------------|--|
| 1 | Research Skills | Knowledge: Understanding of advanced research methods and tools. Skill: Ability to identify, review, and synthesize relevant literature. Attitude: Commitment to thorough investigation and unbiased analysis. |
| 2 | Problem Identification | Knowledge: Deep understanding of the chosen topic area. Skill: Capability to define and frame a research problem effectively. Attitude: Critical and innovative thinking. |
| 3 | Technical Writing | Knowledge: Familiarity with technical writing conventions. Skill: Proficiency in drafting structured, clear, and concise reports. Attitude: Attention to detail and accuracy in documentation. |
| 4 | Presentation Techniques | Knowledge: Understanding of effective communication strategies. Skill: Ability to create and deliver engaging presentations. Attitude: Confidence and poise in public speaking. |

3. Project Timeline

| S/L | Timeline | Description |
|-----|------------|---|
| 1 | Week 1-2 | Introduction to research methods and tools; exploring literature review techniques. |
| 2 | Week 3-4 | Initiating literature survey; identifying key research papers and sources. |
| 3 | Week 5-6 | Analysis and synthesis of literature; identifying gaps and formulating insights. |
| 4 | Week 7-8 | Defining the problem statement based on literature findings. |
| 5 | Week 9-10 | Drafting the initial report; focusing on structure and content. |
| 6 | Week 11-12 | Finalizing the report and preparing the presentation. |
| 7 | Week 13-14 | Presentation rehearsal; peer review and feedback sessions |
| 8 | Week 15 | Submission of the final report and formal presentation. |

4. Course Objectives

- To enable students to conduct a comprehensive literature survey related to their project topic.
- To guide students in defining a clear and feasible problem statement.
- To develop skills in report writing, summarizing findings, and formal presentation.

5. Assessment Details (both CIE and SEE) CIE procedure for ProjectWork Phase-I:

- (1) Single discipline: The CIE marks shall be awarded by a committee consisting of the Head of the concerned Department and two senior faculty members of the Department, one of whom shall be the Guide. The CIE marks awarded for the project work shall be based on the evaluation of the project work Report, project presentation skill, and question and answer session in the ratio 50:25:25. The marks awarded for the project report shall be the same for all the batch mates.
- (2) Interdisciplinary: Continuous Internal Evaluation shall be group-wise at the college level with the participation of all guides of the college. Participation of external guide/s, if any, is desirable. The CIE marks awarded for the project work, shall be based on the evaluation of project work Report, project presentation skill, and question and answer session in the ratio 50:25:25. The marks awarded for the project report shall be the same for all the batch mates.

SEE procedure for Project Work Phase-I: There shall be no SEE. 6. Learning Objectives

| S/L | Learning Objectives | Description |
|-----|---|---|
| 1 | Understand the process of conducting a literature survey. | Students will gain expertise in identifying and reviewing relevant research literature. |
| 2 | To formulate a research problem statement. | Students will learn to define a research problem that is clear, concise, and researchable. |
| 3 | To enhance technical writing and presentation skills. | Students will develop the ability to draft detailed reports and present their findings effectively. |

7. Course Outcomes (COs) and Mapping with POs/ PSOs Course Outcomes (COs)

| Cos | Description | |
|-------------|--|--|
| M23BCD605.1 | Conduct a comprehensive literature survey and synthesize key findings. | |
| M23BCD605.2 | Define a research problem statement based on literature review. | |
| M23BCD6053 | Develop and present a well-structured project report. | |

CO-PO-PSO Mapping

| COs/POs | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 | PSO1 | PSO2 |

| M23BCD605.2 | | 3 | 3 | | 3 | | | 3 | | | | | 3 | 3 |
| M23BCD6053 | 3 | | 3 | 3 | | | 3 | | 3 | 3 | 3 | 3 | 3 | 3 |
| M23BCS605 | 3 | 3 | 3 | 3 | 3 | 3 | 3 | 3 | 3 | 3 | 3 | 3 | 3 | 3 |

8. Future with this Subject

This phase equips students with essential research and analytical skills, forming the foundation for the practical work in Phase II. It also enhances their technical writing and presentation abilities, which are critical for their final year projects and professional careers.

| 6 th Semester | Professional Core Laboratory(PCL) | M22DCSL(0) |
|--------------------------|-----------------------------------|------------|
| | Machine Learning Lab | M23BCSL606 |

| 1.1 | rerequisites | |
|-----|--|---|
| S/L | Proficiency | Prerequisites |
| 1. | Foundational Programming in Python. | • Understanding data types (integers, floats, strings, lists, • dictionaries) Control flow (loops, conditional statements) Functions, Basic file handling. |
| 2. | Working with Data using Pandas | Loading data from files (CSV, etc.) Dataframe manipulation (selecting columns, filtering rows, adding/removing data) Handling missing values. |
| 3. | Data Visualization Basics | Creating plots using Matplotlib or Seaborn (histograms, scatter plots, bar charts, etc.) Customizing plots (labels, titles, legends). |
| 4. | Core Mathematical Concepts | Basic linear algebra (vectors, matrices, linear equations - at a conceptual level) Basic probability and statistics (mean, variance, probability distributions, conditional probability). |
| 5. | Introduction to Machine Learning Concepts. | Understanding of the machine learning process (training data, testing data, model building, evaluation) Familiarity with the types of machine learning (supervised, unsupervised). |

2. Competencies

| S/L | Competency | KSA Description | on |
|-----|------------|-----------------|----|
|-----|------------|-----------------|----|

| 1 | Data Fluency and Exploration | Knowledge: Understanding of various data types (numerical, categorical, text) and their characteristics. Awareness of data quality issues and common data cleaning techniques. Familiarity with key descriptive statistics and visualization methods. Skills: Ability to load, clean, transform, and visualize data using Python libraries like Pandas and Matplotlib/Seaborn. Skill in identifying patterns, trends, and potential relationships within datasets. Attitudes: Appreciation for the importance of data quality and its impact on ML model performance. Curiosity and a data-driven mindset when approaching problems. |
|---|---------------------------------------|---|
| 2 | Supervised Learning Techniques | Knowledge: Understanding of supervised learning principles, including regression and classification. Familiarity with common algorithms: Linear Regression, Logistic Regression, Decision Trees, Random Forests. Knowledge of model evaluation metrics (e.g., MSE, accuracy, precision, recall, F1-score). Skills: Ability to build, train, and evaluate supervised learning models using scikit-learn or similar libraries. Skill in tuning hyper parameters to optimize model performance. Ability to interpret model results and communicate findings effectively. Attitudes: Critical thinking when selecting and evaluating models, considering biasvariance trade-offs. |
| 3 | Unsupervised | Knowledge: |
| | Learning Techniques | Understanding of clustering and dimensionality reduction techniques. Familiarity with algorithms like k-Means Clustering and Principal Component Analysis (PCA). Skills: Ability to apply clustering to discover patterns and group similar data points. Skill in using dimensionality reduction to visualize high-dimensional data and improve model efficiency. Attitudes: Openness to exploring data without predefined labels. Understanding the value of uncovering hidden structures and relationships within data. |
| 4 | Reinforcement Learning Foundations | Knowledge: Basic understanding of reinforcement learning concepts (agents, environments, rewards, policies). Introduction to Q-learning or other fundamental RL algorithms. Skills: Ability to implement a simple Q-learning agent in a simulated environment. Attitudes: Interest in the potential of learning through trial and error. |

3. Syllabus

| Machine Learning Laboratory SEMESTER | | | | | | |
|--|------------|-------------|-----|--|--|--|
| – VI | | | | | | |
| Course Code | M23BCSL606 | CIE Marks | 50 | | | |
| Number of Lecture Hours/Week(L: T: P: S) | (0:0:2:0) | SEE Marks | 50 | | | |
| Total Number of Lecture Hours | 24 Hours | Total Marks | 100 | | | |
| Credits | 01 | Exam Hours | 03 | | | |

Course Objectives:

- 1. Master fundamental machine learning concepts and algorithms across various paradigms (supervised, unsupervised, reinforcement).
- 2. Develop proficiency in implementing and evaluating ML models using Python and relevant libraries.
- 3. Cultivate a data-driven approach to problem-solving through exploration, visualization, and insight generation.
- 4. Critically evaluate ML model performance, considering factors beyond accuracy and selecting appropriate models for diverse tasks.
- 5. Promote a spirit of exploration, independent learning, and continuous growth in the ever-evolving field of machine learning.

1: Data Exploration and Visualization

Aim: Familiarize with basic data loading, cleaning, and visualization techniques.

Question: Analyze a dataset of your choice (e.g., Iris dataset, Titanic dataset) to identify patterns and relationships between variables.

Dataset:

Iris: https://www.kaggle.com/datasets/uciml/iris Titanic:

https://www.kaggle.com/c/titanic.

2: Data Preprocessing Pipeline

Aim: Build a data preprocessing pipeline to handle missing values, categorical data, and feature scaling.

Question: Prepare a dataset for a machine learning task. Implement techniques like imputation, one-hot encoding, and standardization/normalization.

Dataset: Use the same dataset from Program 1 or a different one with similar characteristics.

3: Implementing k-Nearest Neighbors

Aim: Understand and implement the k-NN algorithm for classification.

Question: Build a k-NN classifier to predict the species of iris flowers based on sepal and petal measurements. Experiment with different values of 'k'.

Dataset: Iris dataset.

4: Linear Regression for Prediction

Aim: Apply linear regression to predict a continuous target variable.

Question: Build a linear regression model to predict housing prices based on features like area, number of bedrooms, and location.

Dataset:

Boston Housing: https://www.kaggle.com/datasets/vikrishnan/boston-house-prices

California Housing: https://scikit-learn.org/stable/datasets/real_world.html#california-housing-dataset

5: Logistic Regression for Classification

Aim: Use logistic regression for binary or multi-class classification.

Question: Build a logistic regression model to predict whether a customer will click on an ad based on demographics and browsing history.

Dataset: You can simulate this type of dataset or find related advertising datasets on Kaggle.

6: Comparing Regression Models

Aim: Compare the performance of different regression models on a given dataset.

Question: Evaluate and compare linear regression, polynomial regression, and Ridge/Lasso regression for a prediction task of your choice.

Dataset: Use a dataset suitable for regression, potentially from previous programs.

7: Decision Tree Classification

Aim: Visualize and interpret decision tree models.

Question: Build a decision tree classifier to predict customer churn based on service usage patterns and account information. Visualize the tree and analyze feature importance.

Dataset: You can simulate a churn dataset or search for "telecom churn" datasets.

8: Ensemble Methods - Random Forest

Aim: Apply the Random Forest algorithm and evaluate its performance.

Question: Build a Random Forest classifier for a classification task. Tune hyperparameters (e.g., number of trees) to optimize performance.

Dataset: Choose a dataset suitable for classification, possibly from a previous program.

9: Naive Bayes for Text Classification

Aim: Implement the Naive Bayes algorithm for text data.

Question: Build a spam email classifier using the Naive Bayes algorithm.

Dataset: Spambase: https://archive.ics.uci.edu/ml/datasets/Spambase

Other text datasets: https://www.kaggle.com/datasets?tags=text

10: Customer Segmentation with K-Means Clustering Aim:

Apply clustering to group similar data points.

Question: Segment customers based on their purchasing behavior (e.g., RFM: Recency, Frequency, Monetary value) using k-means clustering. Visualize the clusters.

Dataset: Simulate a customer purchase dataset or use a retail dataset with transaction history.

11: Dimensionality Reduction with PCA

Aim: Reduce data dimensionality while preserving important information.

Question: Apply PCA to a dataset with a high number of features (e.g., images, text) and visualize the data in a lower-dimensional space.

Dataset:

MNIST Handwritten Digits (image): http://yann.lecun.com/exdb/mnist/

20 Newsgroups (text): https://scikit-learn.org/stable/datasets/real world.html#the-20-newsgroups-text-dataset

12: Introduction to Q-Learning

Aim: Implement a basic reinforcement learning algorithm.

Question: Use Q-learning to train an agent to navigate a simple grid-world environment and find an optimal path to a goal.

Dataset: No external dataset is needed. You'll create a grid environment within your code (e.g., using Python lists).

TEXTBOOK:

4. Syllabus Timeline

| | Syllabus Timeline | Degavintion | | | | | |
|-----|--|---|--|--|--|--|--|
| S/L | Syllabus Timeline | Description Description | | | | | |
| 1 | Week-1 Data Exploration and Visualization | Lecture: Introduction to Machine Learning, Types of Learning, Applications, Python for ML Lab: Program 1 - Data Exploration and Visualization | | | | | |
| 2 | Week-2 Data Preprocessing | Lecture: Data Preprocessing Techniques (handling missing values, encoding categorical data, feature scaling) Lab: Program 2 - Data Preprocessing Pipeline | | | | | |
| 3 | Week 3 k- Nearest Neighbours | Lecture: Distance Metrics, k-NN Algorithm, Model Evaluation (accuracy, confusion matrix) Lab: Program 3 - Implementing k-Nearest Neighbors | | | | | |
| 4 | Week 4 Linear Regression | Lecture: Linear Regression Fundamentals, Cost Functions, Gradient Descent (Conceptual), Simple Linear Regression Lab: Program 4 - Linear Regression for Prediction | | | | | |
| 5 | Week 5 Multiple Linear Regression & Logistic Regression | Lecture: Multiple Linear Regression, Assumptions of Linear Regression, Feature Selection, Introduction to Classification Lab: Program 5 - Logistic Regression for Classification. | | | | | |
| 6 | Week 6 Model Evaluation & Comparison (Regression) | Lecture: Overfitting and Underfitting, Bias-Variance Trade-off, Regularization (Ridge, Lasso) Lab: Program 6 - Comparing Regression Models. | | | | | |
| 7 | Week 7: Decision Trees | Lecture: Decision Tree Learning, Entropy, Information Gain, Visualizing Decision Trees Lab: Program 7 - Decision Tree Classification | | | | | |
| 8 | Week 8: Ensemble Methods | Lecture: Ensemble Learning Concepts (Bagging, Boosting), Random Forests Lab: Program 8 - Ensemble Methods - Random Forest. | | | | | |
| 9 | Week 9: Naive Bayes & Text Preprocessing | Lecture: Bayes' Theorem, Naive Bayes Classifier, Text Preprocessing Techniques (Tokenization, Stop Words). Lab: Program 9 - Naive Bayes for Text Classification. | | | | | |
| 10 | Week 10: Unsupervised Learning: Clustering | Lecture: Introduction to Unsupervised Learning, Clustering Algorithms, k-Means Clustering Lab: Program 10 - Customer Segmentation with k-Means Clustering. | | | | | |
| 11 | Week 11: Lecture: Curse of Dimensionality, Feature Extraction, Principal Component Analy | | | | | | |
| 12 | Week 12: Introduction to Reinforcement Learning | Lecture: Fundamentals of Reinforcement Learning, Q-Learning Lab: Program 12 - Introduction to Q-Learning. | | | | | |

5. Teaching-Learning Process Strategies

| S/L | TLP Strategies: | Description |
|-----|-----------------|-------------|
|-----|-----------------|-------------|

| 1 | Theory-Practice Bridge | Begin each lab with a brief recap of relevant ML concepts from lectures. Prompt students to connect theoretical understanding with the lab's practical implementation. |
|---|--------------------------------|---|
| 2 | Scaffolding to Independence | Start with partially completed code templates (scaffolding) for early programs. Gradually reduce scaffolding as labs progress, leading students to write more code independently. |
| 3 | Collaborative Learning | Integrate pair programming, group discussions, and peer code reviews. Encourage students to help each other debug, analyze, and explore alternative approaches. |
| 4 | Interactive Visualizations | Utilize tools like Jupyter Notebooks to encourage interactive data and model exploration. Guide students to create insightful visualizations that deepen their understanding. |
| 5 | Real-World Projects | Group several labs into a larger project using a real-world dataset. This provides context, boosts motivation, and mirrors industry workflows. |

6. Assessment Details (both CIE and SEE)

Marks distribution for Program based Practical Course for CIE

| Sl. No. | Description | % of Marks In Mar | | | | |
|---------|--|--------------------|-----|--|--|--|
| 1 | Observation, write-up, algorithm/program/execution | 80% of the maximum | 80 | | | |
| 2 | Viva-Voce | 20% of the maximum | 20 | | | |
| | Total | 100% | 100 | | | |

Marks scored by the student for 100 are scaled down to 50 marks.

SEE for practical Course (Irrespective of Experiment or program based):

Marks distribution for Experiment based Practical Course for Final CIE

| SL. No. | Description | % of Marks | Marks |
|---------|-----------------------|------------|-------|
| 1 | Write-up, Procedure | 20% | 20 |
| 2 | Conduction and result | 60% | 60 |
| 3 | Viva-Voce | 20% | 20 |
| | Total | 100% | 100 |

- 1. SEE marks for practical course shall be 50 marks
- 2. See for practical course is evaluated for 100 marks and scored marks shall be scaled down to 50 marks.
- 3. Change of experiment/program is allowed only once and 20% marks allotted to the procedure/write-up part to be made zero.
- 4. Duration of SEE shall be 3 hours.

7. Learning Objectives

| S/L | Learning Objectives | Description |
|-----|---|---|
| 1 | Master fundamental ML concepts and algorithms across paradigms. | This objective sets a strong foundation, ensuring students understand not just how to code, but why algorithms work, covering supervised, unsupervised, and reinforcement learning. |
| 2 | Develop proficiency in implementing and evaluating ML models using Python | This focuses on the essential practical skills: coding, using libraries, and assessing model performance. Python is a wise choice given its popularity in the ML community. |
| 3 | Cultivate a data-driven approach | This highlights the importance of data exploration, visualization, and insight generation, which are essential for real-world problem-solving. It's not just about building models blindly. |

| 4 | Critically evaluate ML model performance. | This promotes a deeper understanding of model selection and evaluation. It moves beyond simple accuracy metrics to consider factors like biasvariance trade-off, interpretability, and suitability for specific tasks. |
|---|---|--|
| 5 | Promote a spirit of exploration | This is crucial in the rapidly evolving field of ML. It encourages students to be lifelong learners, adapt to new technologies, and approach ML with curiosity and a desire for continuous improvement. |

8. Course Outcomes (COs) and Mapping with POs/ PSOs Course Outcomes (COs)

| COs | Description |
|--------------|---|
| M23BCSL606.1 | Prepare data for machine learning by effectively applying preprocessing, feature engineering, and exploratory analysis techniques to diverse datasets. |
| M23BCSL606.2 | Implement a range of machine learning algorithms by successfully building and training supervised and unsupervised learning models in Python, including k-NN, regression, decision trees, random forests, k-means, and PCA. |
| M23BCSL606.3 | Analyze machine learning results by interpreting model outputs, identifying patterns and insights in data, and effectively communicating findings through visualizations and reports. |
| M23BCSL606.4 | Evaluate and select appropriate machine learning models by critically comparing their performance using relevant metrics and considering factors beyond simple accuracy to justify choices for specific tasks. |
| M23BCSL606.5 | Design a basic reinforcement learning agent by developing a Q-learning agent to solve a simple problem in a simulated environment. |

CO-PO-PSO Mapping

| COs/POs | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 | PSO1 | PSO2 |

|-----------------|----|----|----|----|----|-----|
| Total | 10 | 20 | 20 | 10 | 40 | 100 |

10. Future with this Subject:

- 1. Capstone Projects and Research: The ML skills gained in this course can prove invaluable for final year projects. Students can leverage this knowledge to optimize robotic systems, analyze sensor data for predictive maintenance, or develop intelligent control algorithms all empowered by the solid foundation built in this course.
- 2. **Advanced Engineering Electives:** Many higher-level electives, such as "Robotics," "Computer Vision," "Data Science," or "Artificial Intelligence," rely heavily on ML concepts. Students who have mastered the fundamentals through this course will be well-prepared to excel in these advanced subjects.
- 3. **Data-Driven Decision Making:** Regardless of their specialization, the ability to extract meaningful insights from data is an essential skill for any engineer. This course equips students to make informed, data-driven decisions, analyze trends, and approach complex engineering problems with a data-centric perspective.

Job Prospects:

- 1. **High Demand, High Reward:** ML expertise is highly sought after across industries, making it one of the most in-demand skillsets in today's job market. Graduates with a strong foundation in ML will have a competitive edge in securing rewarding and impactful roles.
- 2. Career Versatility: ML skills are transferable to a wide range of industries and job titles. Potential career paths include Machine Learning Engineer, Data Scientist, AI Specialist, Robotics Engineer, or any position requiring data analysis, predictive modeling, and intelligent system development.
- 3. **Future-Proof Skills:** The field of ML is constantly evolving. This course equips graduates with the foundational knowledge and adaptive learning mindset needed to stay ahead of the curve, embrace new advancements, and thrive in a dynamic career landscape.

| 6 th Semester | Ability Enhancement course(AEC) GENERATIVE AI LAB | M23BIS607A |
|--------------------------|---|------------|
|--------------------------|---|------------|

1. Prerequisites

| S/L | Proficiency | Prerequisites | |
|-----|--|---|--|
| 1 | Basic Understanding of Machine Learning | Familiarity with fundamental machine learning concepts and techniques, including supervised and unsupervised learning, is essential. Understanding algorithms like linear regression, classification, and clustering provides a foundation for grasping more advanced generative models. | |
| 2 | Knowledge of Neural Networks | A solid understanding of neural network architectures, including feedforward networks, convolutional neural networks (CNNs), and recurrent neural networks (RNNs), is crucial. This background will help in comprehending how generative models like GANs (Generative Adversarial Networks) and VAEs (Variational Autoencoders) work. | |
| 3 | Programming Skills Proficiency in programming languages commonly used in AI development, such a Python, is necessary. Familiarity with libraries and frameworks like TensorFlow PyTorch, or Keras will be beneficial for implementing and experimenting with generative models. | | |
| 4 | Mathematical Foundations | | |
| 5 | Experience with Data Handling and Preprocessing | A strong grasp of mathematics, particularly linear algebra, calculus, and probability theory, is important. These mathematical concepts underpin many machine learning algorithms and generative models, enabling a deeper understanding of their workings and optimization. | |

2. Competencies

| S/L | Competency | KSA Description |
|-----|--|---|
| 1 | Understanding Generative Models | Ability to select appropriate generative models based on specific use cases and data characteristics. Ability to troubleshoot and optimize model performance to achieve desired outputs. |
| 2 | Programming and Implementation | Ability to adapt and extend existing codebases for custom generative AI applications. |
| 3 | Mathematical and Statistical Analysis | Ability to identify and address mathematical challenges during model development and training. |
| 4 | Data Handling and Preprocessing | • Ability to evaluate data quality and ensure it meets the requirements of generative models. |
| 5 | Ethical and Practical Implications | Ability to make informed decisions regarding the ethical implications of generative AI projects. |
| 6 | Research and Development | Ability to communicate the potential risks and benefits of generative AI technologies to stakeholders |

3. Syllabus

| Generative AI Lab (M23BIS607A) SEMESTER – VI | | | |
|---|---------------------|-------------|-----|
| Course Code | M23BIS607A | CIE Marks | 50 |
| Number of Lecture Hours/Week(L: T: P: S) | 0:0:2:0 | SEE Marks | 50 |
| Total Number of Lecture Hours | 2 hr/week Practical | Total Marks | 100 |
| Credits | 01 | Exam Hours | 01 |

Course objectives: This course will enable students to:

- Understand and apply the fundamentals of Generative AI and large language models.
- Implement GPT architecture for text generation and dialogue systems.
- Fine-tune BERT for downstream NLP tasks and explore advanced Transformer architectures.
- Evaluate real-world applications, challenges, and emerging trends in Generative AI

List of problems for which student should develop program and execute in the Laboratory 1. Generate a continuation of a given text prompt using GPT-2. 2. Generate an image based on a text description using Stable Diffusion. 3. Generate a short piece of music using Magenta. 4. Apply style transfer to an image using a pre-trained neural network. 5. Generate a summary of a long piece of text using a pre-trained summarization model. 6. Create a simple chatbot that responds to user input using Rasa. 7. Convert text into speech using Tacotron and a vocoder. 8. Generate code snippets based on a prompt using OpenAI Codex. 9. Generate an image of handwritten digits using a GAN. 10. Generate a poem about a specific topic using GPT-3

4. Syllabus Timeline

| S/L | Syllabus Timeline | Description |
|-----|-------------------|------------------------|
| 1 | Week 1-2: | Introduction, Program1 |
| 2 | Week 3-4: | Program 2, Program 3. |
| 3 | Week 5-6: | Program 4, 5 |
| 4 | Week 7-8: | Program 6, 7,8 |
| 5 | Week 9-10: | Program 9,10 |

5. Teaching-Learning Process Strategies

| S/L | TLP Strategies: | Description |
|-----|---|--|
| 1 | Interactive Use interactive lectures to introduce new concepts. Incorporate questions discussions to engage students. | |
| 2 | Coding Sessions | Demonstrate the implementation of different Testing live, showing step-by-step coding and debugging. |
| 3 | Lab Exercises | Design lab exercises that require students to implement and manipulate Testing process. |

| 4 | Coding Assignments | Assign regular coding tasks that reinforce lecture material and provide practical experience. |
|---|----------------------------|---|
| 5 | Group Projects | Encourage students to work in groups for larger projects, fostering teamwork and collaborative problem-solving. |
| 6 | Code Documentation | Practice writing clear and comprehensive documentation for all coding assignments and projects. |
| 7 | Programming Assignments | Assign programming tasks and mini projects to reinforce practical skills associated with competencies. |

6. Assessment Details (both CIE and SEE)

Class Work:-A

CIE Split up for Laboratory based Ability Enhancement Course

| SL. No. | Description | % of Marks | In Marks |
|---------|--|------------|----------|
| 1 | Write-up, Conduction, result and Procedure | 60% | 30 |
| 2 | Viva-Voce | 40% | 20 |
| Total | | 100% | 50 |

The Test marks should be scaled down to 30marks (60% of the maximum Marks) Laboratory Test: -B

CIE Split up for Test in Laboratory based Ability Enhancement Course

| SL. No. | Description | % of Marks | In Marks |
|---------|--|------------|----------|
| 1 | Write-up, Conduction, result and Procedure | 60% | 30 |
| 2 | Viva-Voce | 40% | 20 |
| Total | | 100% | 50 |

The Test marks should be scaled down to 20marks (40% of the maximum Marks)

Final CIE for Laboratory based Ability Enhancement Course

| SL. No. | Description | % of Marks | In Marks |
|-------------------------------|---------------------------------------|--------------------|----------|
| 1 | Scaled Down marks of record/journal-A | 60% of the maximum | 30 |
| 2 Scaled Down marks of test-B | | 40% of the maximum | 20 |
| | Total | 100% | 50 |

Final CIE Marks = (A) + (B)

SEE for practical Course:

| SL. No. | Description | % of Marks | Marks |
|-------------|-----------------------|------------|-------|
| 1 | 1 Write-up, Procedure | | 20 |
| 2 | Conduction and result | 60% | 60 |
| 3 Viva-Voce | | 20% | 20 |
| | Total | | 100 |

- 1. SEE marks for practical course shall be 50 marks
- 2. SEE for practical course is evaluated for 100 marks and scored marks shall be scaled down to 50 marks.
- 3. Change of experiment/program is allowed only once and 20% marks allotted to the procedure/write-up part to be made zero.

Duration of SEE shall be 3 hours.

7. Learning Objectives

| S/L | Learning Objectives | Description | |
|-----|---------------------------------|---|--|
| 1 | Build Generative Models | Learn to design and implement various generative models like GANs and VAEs. | |
| 2 | Optimize Model Performance | Develop skills to evaluate and enhance the effectiveness of generative models. | |
| 3 | Apply Generative AI | Apply generative AI techniques to practical problems in fields such as image and text generation. | |
| 4 | Understand Ethical Implications | Analyze the ethical considerations and societal impacts of generative AI technologies. | |
| 5 | Stay Updated with Trends | Keep up with the latest advancements and research in the field of generative AI. | |

8. Course Outcomes (COs) and Mapping with POs/ PSOs Course Outcomes (COs)

| COs | Description |
|---|--------------------------------------|
| M23BIS607A.1 Understand large language models' architecture and pre-training techniques | |
| M23BIS607A.2 Apply the GPT and BERT model for natural language processing tasks | |
| M23BIS607A.3 Analyzing the performance and limitations of large language models. | |
| M23BIS607A.4 | Examine the Generative AI practices. |

CO-PO-PSO Mapping

| COs/POs | PO1 | | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 | PSO1 | PSO2 |
|--------------|-----|---|-----|-----|-----|-----|-----|-----|-----|------|------|------|------|------|

9. Assessment Plan

Continuous Internal Evaluation (CIE)

| | CO1 | CO2 | CO3 | CO4 | CO5 | Total |
|-------------|-----|-----|-----|-----|-----|-------|
| Program 1-6 | 10 | 10 | 10 | 10 | 10 | 50 |
| Total | 10 | 10 | 10 | 10 | 10 | 50 |

Semester End Examination (SEE)

| | CO1 | CO2 | CO3 | CO4 | CO5 | Total |
|-------------|-----|-----|-----|-----|-----|-------|
| Program 1-6 | 20 | 20 | 20 | 20 | 20 | 50 |
| Total | 20 | 20 | 20 | 20 | 20 | 50 |

Conditions for SEE Paper Setting:

Each module of SEE question paper should be allocated with questions for 20% of the total SEE marks

10. Future with this Subject

- 1. **Design and Implement Generative Models**: Students will be able to design, develop, and implement various generative models, such as Generative Adversarial Networks (GANs) and Variational Autoencoders (VAEs), using appropriate frameworks and tools.
- 2. Conduct Research and Stay Current with Trends: Students will be able to conduct research on current trends and advancements in generative AI, staying informed about the latest developments and innovations, and applying this knowledge to enhance their own projects and contributions to the field.
- 3. **Evaluate and Optimize Model Performance**: Students will be able to evaluate the performance of generative models using relevant metrics and techniques, and optimize models to enhance their effectiveness and efficiency in generating desired outputs.
- 4. **Apply Generative AI to Real-World Problems**: Students will be able to apply generative AI techniques to solve real-world problems across different domains, such as image synthesis, text generation, and data augmentation, demonstrating practical application skills.
- 5. **Analyze Ethical and Social Implications**: Students will be able to analyze and discuss the ethical and social implications of generative AI technologies, including issues related to bias, privacy, and misuse, and propose strategies for responsible AI development and deployment.

| 6 th Semester | Ability Enhancement-V(AE-V) Devops | M23BCS607B |
|--------------------------|-------------------------------------|------------|
|--------------------------|-------------------------------------|------------|

| Prere | quisites | |
|-------|--|--|
| S/L | Proficiency | Prerequisites |
| 1 | Basic Understanding of Programming and Scripting Languages | Knowledge of programming fundamentals and experience with at least one scripting language (e.g., Python, JavaScript) is required to create automation scripts, work with Selenium WebdriverIO, and write scripts for Maven and Docker. |
| 2 | Familiarity with Command Line Interfaces (CLI) | • Proficiency in using command-line tools like GitBash or terminal commands is essential for interacting with Git, executing Docker commands, and managing CI/CD pipelines |
| 3 | Introduction to Software Development Life Cycle (SDLC) | A foundational understanding of the software development life cycle and its various stages will help students grasp the context of continuous integration, continuous deployment, and Agile methodologies used in DevOps practices. |
| 4 | Basic Knowledge of Web Development and HTML/CSS | • Familiarity with web technologies such as HTML and CSS is necessary for creating and understanding XPath expressions for locating elements in web applications during automation testing |
| 5 | Experience with Integrated Development Environments (IDEs) and Build Tools | • Prior experience working with IDEs (e.g., IntelliJ IDEA, Eclipse) and build tools like Maven will be beneficial for managing project dependencies, building projects, and integrating with Jenkins for CI/CD |

2. Competencies

| S/L | Competency | KSA Description |
|-----|---|-----------------|
| 1 | Proficient Use of Version Control Systems | |

| 2 | Mastery of Continuous Integration and Automation Tools | Knowledge: Understand the fundamentals of continuous integration, continuous deployment, and automation in a DevOps environment. Skills: Ability to configure and manage Jenkins pipelines, automate project execution, and apply various scheduling techniques within a CI/CD framework. Attitudes: |
|---|--|--|
| | 10015 | Develop a proactive mindset towards automation, recognizing its role in improving efficiency, reducing errors, and ensuring consistent project delivery. |
| 3 | Advanced Automation and Testing Techniques | Knowledge: Comprehend the role of automated testing in software development, including the use of Selenium WebdriverIO and XPath. Skills: Ability to write and execute test scripts using Selenium WebdriverIO, effectively locate elements in web applications using different XPath strategies, and integrate with reporting tools for comprehensive test coverage. Attitudes: Foster an attention to detail and thoroughness in testing, emphasizing the importance of |
| 4 | Integration of | accuracy and reliability in automated testing processes. Knowledge: |
| - | Build and Deployment | Understand the lifecycle of software builds and deployments, including the use of Maven, Docker, and Jenkins. |
| | Technologies | Skills: Ability to apply Maven lifecycle commands, createDocker containers, and integrate these tools with Jenkins to streamline the build and deployment processes. Attitudes: Embrace a continuous improvement mindset, focusing on optimizing build and deployment processes for speed, efficiency, and reliability. |
| 5 | Effective Application of Agile and DevOps Practices | Knowledge: Grasp the principles of Agile methodologies and DevOps practices, including backlog management, sprint planning, and the integration of various DevOps tools. Skills: Ability to create and manage project backlogs, sprints, and tasks using Agile techniques, retrieve and manipulate data using JQuery, and integrate multiple DevOps tools into a cohesive framework. Attitudes: Develop a collaborative and adaptable approach to project management, valuing teamwork, continuous feedback, and the iterative nature of Agile and DevOps practices. |

3. Syllabus

| DEVOPS SEMESTER – VI | | | | |
|--|------------|-------------|-----|--|
| Course Code | M23BCS607B | CIE Marks | 50 | |
| Number of Lecture Hours/Week(L: T: P: S) | (0:0:2:0) | SEE Marks | 50 | |
| Total Number of Lecture Hours | 24 Hours | Total Marks | 100 | |
| Credits | 01 | Exam Hours | 02 | |

Course Objectives:

- 1. Understanding and Application of Version Control Systems.
- 2. Mastering Continuous Integration and Automation.
- 3. Proficient Use of Automation Tools for Web Application Testing.
- 4. Integration and Management of Build and Deployment Pipelines
- 5. Implementation of Agile and DevOps Practices in Project Management.

Program -1

Demonstrate and Create project in local and remote repository using git and GitBash.

Program -2

Demonstrate and apply fork, merge, conflict and rebase concepts on repo using GitHub.

Program -3

Demonstrate the process of interfacing the repo using Jenkins to automate the project execution.

Program -4

Create a repository and apply different types of scheduling using continuous integration tool.

Program -5

Create a script to automate the operation using selenium WebdriverIO and integrate with reporting tools.

Program -6

Create a script using different types of Xpath and locate elements in an application.

Program-7

Apply maven life cycle commands on project and integrate with Jenkins tools

Program-8

Apply basic commands for Dockers and integrate with other tools.

Program-9

Create and apply backlogs, sprints, tasks for project and retrieve data using J-query.

Program-10

Create a Framework and integrate different DevOps tools for an application.

TEXTBOOKS:

- 1."Pro Git" by Scott Chacon and Ben Straub Available for free online.
- 2. "Continuous Delivery: Reliable Software Releases through Build, Test, and Deployment Automation"

by Jez Humble and David Farley

REFERENCE BOOKS:

- 1."Selenium WebDriver 3 Practical Guide" by UnmeshGundecha
- 2."Docker: Up & Running: Shipping Reliable Containers in Production" by Karl Matthias and Sean P. Kane

- 2.https://www.youtube.com/watch?v=6YZvp2GwT0A

4. Syllabus Timeline

| S/L | Syllabus Timeline | Description |
|-----|---|--|
| 1 | Week 1: Introduction to Version Control and Git | Demonstrate and Create Project in Local and Remote Repository Using Git and GitBash Introduction to Git, setting up GitBash, creating local repositories, initializing remote repositories, and pushing code. Lab/Practice: Set up a Git repository, commit changes, and push them to GitHub. |
| 2 | Week 2: Advanced Git Concepts | Demonstrate and Apply Fork, Merge, Conflict, and Rebase Concepts on Repo Using GitHub Forking repositories, branching, merging, handling conflicts, and rebasing. Lab/Practice: Fork a repository, create a branch, make changes, merge, and resolve conflicts. |
| 3 | Week 3: Introduction to Jenkins and CI/CD | Demonstrate the Process of Interfacing the Repo Using Jenkins to Automate the Project Introduction to Jenkins, setting up a Jenkins server, and creating a basic CI/CD pipeline. Lab/Practice: Set up Jenkins, integrate it with a GitHub repository, and create an automated build. |
| 4 | Week 4: Advanced Jenkins and Scheduling | Create a Repository and Apply Different Types of Scheduling Using Continuous Integration Tools. Jenkins scheduling, cronjobs, and different scheduling strategies in CI/CD pipelines. Lab/Practice: Implement scheduling in Jenkins pipelines, using cron expressions for various tasks. |
| 5 | Week 5: Introduction to Selenium and Automation Scripting | Create a Script to Automate the Operation Using Selenium WebdriverIO and Integrate with Reporting Tools Introduction to Selenium WebdriverIO, writing basic test scripts, and integrating with reporting tools Lab/Practice: Write Selenium scripts using WebdriverIO, automate a basic web operation, and generate reports. |
| 6 | Week 6: XPath Strategies in Web Automation | Create a Script Using Different Types of XPath and Locate Elements in an Application Understanding XPath, types of XPath, and strategies for locating web elements. Lab/Practice: Create and run test scripts using different XPath strategies in a sample web application. |
| 7 | Week 7: Build Management with Maven | Apply Maven Life Cycle Commands on Project and Integrate with Jenkins Tools Introduction to Maven, Maven lifecycle phases, and integrating Maven with Jenkins. Lab/Practice: Create a Maven project, execute Maven lifecycle commands, and integrate with Jenkins for builds. |
| 8 | Week 8: Containerization with Docker | Apply Basic Commands for Docker and Integrate with Other Tools Introduction to Docker, Docker commands, containerization, and integration with CI/CD tools. Lab/Practice: Create and manage Docker containers, and integrate Docker with Jenkins in a CI/CD pipeline. |

2023Scheme - 5th to 6th Sem Competency Based Syllabi for B.E in CS(DS)

| 9 | Week 9: Agile Methodologies and Project Management | Create and Apply Backlogs, Sprints, Tasks for Project and Retrieve Data Using JQuery. Agile methodologies, managing backlogs and sprints, using JIRA or similar tools, and using JQuery for data manipulation. Lab/Practice: Set up a project in an Agile tool, create and manage sprints and tasks, and retrieve data using JQuery. |
|----|--|--|
| 10 | Week 10: | Create a Framework and Integrate Different DevOps Tools for an Application |
| | Framework and Tool Integration | Overview of DevOps frameworks, integrating tools like Jenkins, Docker, Maven, and Selenium into a cohesive CI/CD pipeline. Lab/Practice: Develop and demonstrate a full CI/CD pipeline integrating multiple DevOps tools in a project framework. |

5. Teaching-Learning Process Strategies

| S/L | TLP Strategies: | Description |
|-----|---|--|
| 1 | Project-Based Learning (PBL) | Integrate hands-on projects that align with each week's topics. Integrate hands-on projects that align with each week's topics. |
| 2 | Collaborative Learning and Peer Reviews | Encourage collaboration among students through pair programming, group tasks, and peer reviews. Organize students into small teams to work on projects, and incorporate peer review sessions where students evaluate each other's code, Git workflows, and automation scripts. |
| 3 | Flipped Classroom | Use the flipped classroom model, where students study theoretical content through videos and readings before class, and spend in-class time engaging in hands-on activities, discussions, and problem-solving. |
| 4 | Incremental and Iterative Learning | Teach concepts incrementally, building complexity over time. Start with foundational concepts like Git basics and gradually introduce more advanced topics like Jenkins integration, Docker commands, and full Dev Opstoolchain integration. |
| 5 | Continuous Assessment and Feedback | Implement continuous assessment methods that include quizzes, coding challenges, and mini-projects. Conduct regular assessments such as short quizzes on Git commands, Jenkins pipelines, and Docker basics. |

6. Assessment Details (both CIE and SEE)

Class Work:-A

CIE Split up for Laboratory based Ability Enhancement Course

| SL. No. | Description | % of Marks | In Marks |
|---------|--|------------|----------|
| 1 | Write-up, Conduction, result and Procedure | 60% | 30 |
| 2 | Viva-Voce | 40% | 20 |
| | Total | 100% | 50 |

The Test marks should be scaled down to 30marks (60% of the maximum Marks)

Laboratory Test: -B

CIE Split up for Test in Laboratory based Ability Enhancement Course

| SL. No. | Description | % of Marks | In Marks |
|---------|--|------------|----------|
| 1 | Write-up, Conduction, result and Procedure | 60% | 30 |
| 2 | Viva-Voce | 40% | 20 |
| | Total | 100% | 50 |

The Test marks should be scaled down to 20marks (40% of the maximum Marks) Final

CIE for Laboratory based Ability Enhancement Course

| SL. No. | Description | % of Marks | In Marks |
|---------|---------------------------------------|--------------------|----------|
| 1 | Scaled Down marks of record/journal-A | 60% of the maximum | 30 |
| 2 | Scaled Down marks of test-B | 40% of the maximum | 20 |
| | Total | 100% | 50 |

FinalCIEMarks =(A)+(B) SEE

for practical Course:

| SL. No. | Description | % of Marks | Marks |
|---------|-----------------------|------------|-------|
| 1 | Write-up, Procedure | 20% | 20 |
| 2 | Conduction and result | 60% | 60 |
| 3 | Viva-Voce | 20% | 20 |
| | Total | 100% | 100 |

- 1. SEE marks for practical course shall be 50 marks
- 2. SEE for practical course is evaluated for 100 marks and scored marks shall be scaled down to 50 marks.
- 3. Change of experiment/program is allowed only once and 20% marks allotted to the procedure/write-up part to be made zero.
- 4. Duration of SEE shall be 3 hours.

7. Learning Objectives

| S/L | Learning Objectives | Description |
|-----|--|--|
| 1 | Master the Fundamentals of Version Control with Git | Students will be able to create, manage, and collaborate on projects using Git and GitHub, including setting up local and remote repositories, and executing advanced version control operations like branching, merging, rebasing, and resolving conflicts. |
| 2 | Implement Continuous Integration and Delivery Pipelines Using Jenkins | Students will learn to configure Jenkins for automating project builds, tests, and deployments, integrating it with GitHub repositories and other CI/CD tools, and applying various scheduling techniques to optimize workflow efficiency |
| 3 | Analysis of Stress and StrainAutomate Web ApplicationTesting Using Selenium WebdriverIO | Students will be able to write and execute automated test scripts using Selenium WebdriverIO, utilize different XPath strategies to locate web elements, and integrate these scripts with reporting tools for comprehensive test automation. |
| 4 | Apply Containerization and Build Management Techniques Using Docker and Maven | Students will gain proficiency in using Docker to containerize applications, apply Maven lifecycle commands for build management, and integrate these tools with Jenkins to streamline the build, test, and deployment processes |
| 5 | Manage Agile Project Workflows and Retrieve Data Using JQuery | Students will learn to implement Agile methodologies, including creating and managing backlogs, sprints, and tasks in a project, and effectively use JQuery for data retrieval and manipulation within web applications |
| 6 | Develop and Integrate a Comprehensive DevOpsToolchain Framework | Students will be able to design, develop, and implement a cohesive DevOpstoolchain framework that integrates multiple tools such as Git, Jenkins, Docker, and Maven, Selenium, and Agile project management practices to automate and manage the software development lifecycle efficiently. |

8. Course Outcomes (COs) and Mapping with POs/ PSOs Course Outcomes (COs)

| COs | Description |
|--------------|---|
| M23BCS607B.1 | Apply Version Control Techniques Demonstrate the ability to create, manage, and maintain local and remote repositories using Git and GitBash |
| M23BCS607B.2 | Implement Continuous Integration and Automation Utilize Jenkins to automate the integration, testing, and deployment processes by creating and scheduling CI/CD pipelines. |
| M23BCS607B.3 | Develop Automation Scripts for Web Applications |
| M23BCS607B.4 | Integrate Development Tools with Docker and Maven |
| M23BCS607B.5 | Design Agile and DevOps Practices. |

CO-PO-PSO Mapping

| COs/POs | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 | PSO1 | PSO2 |

| Program 1 to 10 | 10 | 20 | 20 | 10 | 40 | 100 |
| Total | 10 | 20 | 20 | 10 | 40 | 100 |

10. Future with this Subject:

- High Demand for DevOps Professionals: Proficiency in tools like Git, Jenkins, Docker, and Selenium, coupled with Agile and DevOpsmethodologies, will make graduates highly sought after in industries ranging from tech startups to large enterprises.
- Cloud-Native and Microservices Architectures: Skills in containerization (e.g., Docker) and CI/CD pipelines will be critical for managing complex, distributed applications in cloud environments. Students trained in these areas will be well-prepared for roles in cloud engineering and site reliability engineering (SRE)
- **Automation and Artificial Intelligence in DevOps**: Knowledge in automation scripting and tool integration will be a foundational skill as AI-driven tools become standard in CI/CD pipelines and infrastructure management. This subject will prepare students to innovate in these areas.
- **Expansion of Agile and DevOpsBeyond IT**: A deep understanding of Agile and DevOps practices will be valuable not just in tech roles but also in broader organizational contexts, allowing graduates to contribute to the digital transformation of various industries.
- **Continuous Learning and Adaptability**: A deep understanding of Agile and DevOps practices will be valuable not just in tech roles but also in broader organizational contexts, allowing graduates to contribute to the digital transformation of various industries.

| 6th Semester Ability Enhancement-V(AE-V) Programing with Kotlin M23BIS607C |
|--|
|--|

| 1 | Prerequis | ites |
|---|------------------|------|
| | | |

| | Trerequisites | |
|-----|---------------------------------------|---|
| S/L | Proficiency | Prerequisites |
| 1 | | Understanding of fundamental programming concepts such as variables, data types, control structures (if statements, loops), functions, and basic algorithms is crucial. |
| 2 | Programming | supports both functional and object-oriented programming paradigms. While not strictly required, familiarity with OOP concepts like classes, objects, inheritance, polymorphism, and encapsulation |
| 3 | Functional Programming Concepts | Understanding functional programming concepts such as higher- order functions, immutability, pattern matching, and recursion |
| 4 | Development Environment Setup | Setting up a development environment for Kotlin programming is essential. IDEs such as IntelliJ IDEA, Eclipse, or Visual Studio Code with Kotlin plugins provide excellent support for development. |

2. Competencies

| S/L | Competency | KSA Description |
|-----|---------------------------------|--|
| 1 | Conciseness | Knowledge: Scala allows developers to write concise code, reducing boileplate and enhancing productivity. Skills: Learning the basic syntax of Kotlin |
| 2 | Functional Programming | Knowledge: Scala provides strong support for functional programming constructs such as pattern matching, enabling developers to write clean and expressive code. Skills: Practicing the concept of functional programming |
| 3 | Object- Oriented Programming | Knowledge: Kotlin is fully object-oriented, supporting features such as classes, inheritance, and polymorphism. It integrates with existing Java libraries and frameworks. Skills: Understanding the concept of OOP concepts and libraries. |
| 4 | Concurrency: | Knowledge: Kotlin provides powerful concurrency primitives such as actors and futures, making it well-suited for building scalable and concurrent applications. Skills: Learning relevant applications of Kotlin. |
| 5 | Tooling and Ecosystem | Knowledge : Kotlin has a rich ecosystem of libraries and frameworks for various use cases, including web development, data processing, and concurrency Skills : Applying programming skills to build a new application. |

3. Syllabus

| Programing with Kotlin SEMESTER – VI | | | | | |
|--|------------|-----------|----|--|--|
| Course Code | M23BIS607C | CIE Marks | 50 | | |
| Number of Lecture Hours/Week(L: T: P: S) | (0:0:2:0) | SEE Marks | 50 | | |

| Total Number of Lecture Hours | 8-10 Lab slots | Total Marks | 100 |
|--|----------------|-------------|-----|
| Credits | 01 | Exam Hours | 2 |
| Course objectives: This course will enable students to: • Understand basics of Kotlin programming | | | |

- Understand basics of Kotlin programming.
- To gain an understanding of the processes that are involved in an Android Application Development
- Analyzing the complex problems with the Functional concept.

| • | Apply the new emerging tool to model the solution to various problems using Kotlin | | |
|-----|--|--|--|
| | PRACTICAL COMPONENT | | |
| . 1 | Installation of Kotlin. | | |
| 2 | Program for variable declaration in Kotlin | | |
| 3 | Program for declaring String and manipulating string. | | |
| 4 | Program on Operators | | |
| 5 | Program on Conditional Statement. | | |
| 6 | Program on Loops and Arrays | | |
| 7 | Program for Simple function and Recursive function. | | |
| 8 | Program on Default and Named argument in function. | | |
| 9 | Program for Inline function and Vararg parameter in function | | |
| 10 | Program for Classes and Objects | | |
| 11 | Program on Constructor. | | |
| 12 | Program for interfaces | | |
| 13 | Program for Exception handling | | |
| 14 | Program for App development. | | |

Text Books:

- "Kotlin in Action" Dmitry Jemerov, Svetlana Isakova -Manning Publications (2017)
- "Kotlin for Android App Development" by Peter Sommerhoff. 2.

Syllabus Timeline

| S/L | Syllabus Timeline | Description |
|-----|-----------------------------------|--|
| 1 | Week 1-10: All lab Experiments | Competency: Kotlin programming Knowledge: Importance of Kotlin programming, ability to address the challenges of modern software development, including scalability, concurrency, maintainability, and productivity Skills: Building Scalable, efficient, and maintainable applications across various domains, including web development, big data processing, distributed systems using IntelliJ |

2023Scheme - 5th to 6th Sem Competency Based Syllabi for B.E in CS(DS)

5. Teaching-Learning Process Strategies

| · | reaching-Dearming 110 | 200 201 400 200 |
|-----|--------------------------|--|
| S/L | TLP Strategies: | Description |
| 1 | Lecture Vietnaa | Utilize various teaching methods within the lecture format to reinforce competencies. |
| 2 | Video/Animation | Incorporate visual aids like videos/animations to enhance understanding of Verilog concepts. |
| 3 | Collaborative Learning | Encourage collaborative learning for improved competency application. |
| 4 | | Pose HOTS questions to stimulate critical thinking related to each competency. |
| 5 | | ImplementPBLto enhance analytical skills and practical application of competencies |
| 6 | Dain Duagnamaing | Incorporate pair programming sessions where students collaborate in pairs to solve coding tasks or work on projects together. |
| 7 | Problem-Solving Sessions | Organize problem-solving sessions where students can work together to solve coding challenges and overcome programming obstacles |

6. Assessment Details (both CIE and SEE) Continuous Internal Evaluation (CIE):

Class Work:-A

CIE Split up for Laboratory based Ability Enhancement Course

| SL. No. | Description | % of Marks | In Marks |
|---------|--|------------|----------|
| 1 | Write-up, Conduction, result and Procedure | 60% | 30 |
| 2 | Viva-Voce | 40% | 20 |
| Total | | 100% | 50 |
| Total | | 100% | 50 |

The Test marks should be scaled down to 30marks (60% of the maximum Marks)

Laboratory Test: -B

CIE Split up for Test in Laboratory based Ability Enhancement Course

| SL. No. | Description | % of Marks | In Marks |
|---------|--|------------|----------|
| 1 | Write-up, Conduction, result and Procedure | 60% | 30 |
| 2 | Viva-Voce | 40% | 20 |
| Total | | 100% | 50 |

The Test marks should be scaled down to 20marks (40% of the maximum Marks)

Final CIE for Laboratory based Ability Enhancement Course

| SL. No. | Description | % of Marks | In Marks |
|---------|-------------|------------|----------|
|---------|-------------|------------|----------|

2023Scheme - 5th to 6th Sem Competency Based Syllabi for B.E in CS(DS)

| 1 | Scaled Down marks of record/journal-A | 60% of the maximum | 30 |
|-------|---------------------------------------|--------------------|----|
| 2 | Scaled Down marks of test-B | 40% of the maximum | 20 |
| Total | | 100% | 50 |

Final CIE Marks = (A) + (B)

SEE for practical Course:

| SL. No. | Description | % of Marks | Marks |
|---------|-----------------------|------------|-------|
| 1 | Write-up, Procedure | 20% | 20 |
| 2 | Conduction and result | 60% | 60 |
| 3 | 3 Viva-Voce | | 20 |
| | Total | | 100 |

- SEE marks for practical course shall be 50 marks
- SEE for practical course is evaluated for 100 marks and scored marks shall be scaled down to 50 marks.
- Change of experiment/program is allowed only once and 20% marks allotted to the procedure/write-up part to be made zero.
- Duration of SEE shall be 3 hours.

7. Learning Objectives

| S/L | Learning Objectives | Description |
|-----|--|---|
| 1 | Understanding Syntax and Basic Concepts: | The fundamental syntax of Kotlin, including variables, data types, control structures, functions, and basic object-oriented concepts like classes and objects. |
| 2 | Libraries and | Exploring popular functional libraries and frameworks in the Kotlin ecosystem, such as Cats, Scalaz, and fs2, and understanding to use them to build functional, composable, and type-safe applications |
| 3 | | Apply Kotlinknowledge to real-world projects or problem-solving exercises to gain practical experience and reinforce learning. |
| 4 | | Understanding the Kotlin interoperates with Java and learning best practices for integrating Kotlin code with existing Java libraries and frameworks. |

8. Course Outcomes (COs) and Mapping with POs/ PSOs

Course Outcomes (COs)

| COs | Description |
|--------------|--|
| M23BIS607C.1 | Understand basics of Kotlin programming |
| M23BIS607C.2 | Formulating the solution to complex problems with concepts of decision making, Looping and Inheritance |

| M23BIS607C.3 | $Designing \ the \ solution \ to \ the \ problems \ with \ the \ knowledge \ of \ List, tuple \ and \ File \ handling.$ |
|--------------|---|
| M23BIS607C.4 | Analyzing the complex problems with the Functional concept. |

Conditions for SEE Paper Setting:

Each module of SEE question paper should be allocated with questions for 20% of the total SEE marks

10. Future with this Subject

Scala's future appears bright, driven by its strong features, ecosystem growth, community support, and its relevance in emerging trends such as functional programming, big data, microservices, and typelevel programming. As organizations increasingly prioritize scalability, concurrency, and developer productivity, Scala is likely to remain a valuable tool for building robust and scalable software systems.

Functional Programming Adoption: Functional programming paradigms are gaining popularity due to their suitability for building scalable, concurrent, and maintainable systems. Scala's strong support for functional programming makes it well-positioned to capitalize on this trend.

Data Science and Big Data: Scala is increasingly being used in the field of data science and big data processing. Frameworks like Apache Spark, which are written in Scala, have propelled its adoption in this domain. As the demand for data-driven insights continues to grow, Scala's role in data science and big data is likely to expand further.

Microservices Architecture: Scala's support for building scalable and concurrent applications makes it well-suited for microservices architecture. As organizations increasingly adopt microservices to build modular, flexible, and scalable systems, Scala is expected to play a significant role in this ecosystem. **Type-Level and Metaprogramming**: Scala's type system is one of its distinguishing features, and there is ongoing research and development in the area of type-level programming and metaprogramming. Advanced type-level features enable developers to express complex constraints and enforce correctness at compile time, leading to more robust and scalable systems.

Tooling and Ecosystem Growth: The Scala ecosystem continues to evolve, with the emergence of new libraries, frameworks, and tools aimed at improving developer productivity and scalability. Improved tooling, IDE support, and build systems contribute to making Scala development more accessible

| 6thSemester | Ability Enhancement Course-V(AE-V) GOLANG PROGRAMMING | M23BCS607D |
|-------------|---|------------|
|-------------|---|------------|

1. Prerequisites

| S/L | Proficiency | Prerequisites |
|-----|-----------------------------------|---|
| 1 | Basic Programming Knowledge | Understanding of programming concepts: Familiarity with basic concepts like variables, loops, conditionals, functions, and data structures (e.g., arrays, slices, maps) is helpful. Experience with another programming language: Prior experience with languages like Python, Java, or C can be beneficial, as it helps you understand Go's syntax and structure more easily. |
| 2 | Development Environment | Operating System: Go is cross-platform, so you can use it on Windows, macOS, or Linux. Text Editor or IDE: You can use any text editor like VS Code, Sublime Text, or a Go-specific IDE like GoLand. VS Code with the Go extension is highly recommended for Go development. |
| 3 | Go Compiler and Tools | Git: Familiarity with Git is helpful for version control, especially when working on larger projects or contributing to open source. |
| 4 | Command Line Interface (CLI) | Basic command-line knowledge: Understanding how to navigate your file system, execute commands, and manage packages using the CLI will be useful. Go often interacts with the terminal, especially when running or building programs. |
| 5 | Internet Connection | Access to documentation and packages: Go has extensive online documentation and a package ecosystem. You'll need an internet connection to access the Go documentation and to download third-party packages. |
| 6 | Familiarity with Go Conventions | Go coding standards: Go has specific coding conventions, like using tabs for indentation and organizing code in specific directory structures. Familiarizing yourself with these early on will help you write idiomatic Go code. |

2. Competencies

| S/L | Competency | KSA Description |
|-----|---|---|
| 1 | Concurrency and Parallelism in Go | Knowledge: Understand Go's concurrency model, including goroutines, channels, and the Go scheduler. Familiarity with parallel processing and how Go manages concurrent tasks. Skills: Ability to design and implement concurrent applications that efficiently utilize multiple CPU cores. Proficiency in managing synchronization issues, avoiding race conditions, and ensuring thread safety. Abilities: Capable of analyzing and optimizing the performance of concurrent Go programs, ensuring that they are both efficient and scalable. Ability to debug complex concurrency-related issues. |

| 2 | Go Language Proficiency | Knowledge: Comprehensive understanding of Go's syntax, data types, control structures, and standard libraries. Familiarity with Go's memory management, garbage collection, and type system. Skills: Proficiency in writing clean, idiomatic Go code. Skilled in leveraging Go's built-in functions and packages to solve common programming tasks efficiently. Abilities: Able to apply Go's features to develop high-performance applications. Capable of mentoring others in Go's best practices and contributing to open-source Go projects. |
|---|--|---|
| 3 | Backend Development with Go | Knowledge: Understanding of backend architecture, RESTful API design, and database integration (both SQL and NoSQL) within the context of Go programming. Familiarity with web frameworks like Gin, Echo, or Fiber. Skills: Expertise in building and maintaining robust backend services and APIs using Go. Skilled in handling HTTP requests, routing, middleware, and integrating |
| | | third-party services. Abilities: Capable of designing and implementing scalable backend systems, optimizing them for performance, and ensuring they can handle high loads. Ability to troubleshoot and resolve backend issues effectively. |
| 4 | Testing and Debugging in Go | Knowledge: In-depth knowledge of Go's testing framework, including testing package, benchmarking, and mock testing. Familiarity with Go's debugging tools and techniques. Skills: Proficient in writing unit tests, integration tests, and benchmarks to ensure code quality and performance. Skilled in debugging Go applications to identify and fix issues efficiently. Abilities: Able to design comprehensive test suites that cover all critical aspects of the application. Capable of using profiling tools to identify performance bottlenecks and optimize code accordingly. |
| 5 | Dependency Management and Project Structuring | Knowledge: Understanding of Go modules for dependency management, including versioning, package distribution, and workspace organization. Familiarity with Go's project structure and best practices. Skills: Ability to manage project dependencies effectively using Go modules. Skilled in organizing code into packages, managing external dependencies, and ensuring reproducible builds. Abilities: Capable of structuring large-scale Go projects in a way that promotes maintainability and scalability. Ability to resolve dependency conflicts and ensure smooth project collaboration. |
| 6 | Performance Optimization in Go | Knowledge: Deep understanding of Go's performance characteristics, including memory management, garbage collection, and CPU usage. Familiarity with tools for profiling and performance analysis. Skills: Expertise in identifying and optimizing performance bottlenecks in Go applications. Skilled in writing efficient code that minimizes memory usage and maximizes execution speed. Abilities: Able to conduct thorough performance audits and implement optimizations that improve the overall efficiency of Go applications. Ability to scale applications to meet increasing demands while maintaining performance. |

3. Syllabus

| GOLANG PROGRAMMING SEMESTER – VI | | | |
|--|-----------|-------------|-----|
| Course Code M23BCS607D CIE Marks 50 | | | |
| Number of Lecture Hours/Week(L: T: P: S) | (0:0:2:0) | SEE Marks | 50 |
| Total Number of Lecture Hours | 24 Hours | Total Marks | 100 |
| Credits | 01 | Exam Hours | 02 |

Course objectives: This course will enable students:

- 1. To learn the basics of Golang Programming.
- 2. To understand and develop Go applications using syntax, data structures, and standard libraries.
- 3. To Debug and analyze Go code for logic, performance, and concurrency issues.
- 4. To Design and optimize scalable backend services and APIs using Go best practices.

| Pgm.No. | List of Programs |
|---------|--|
| | PART-A |
| 1 | Design and Implement a Go program to print the name of the months and number of days based on user input number. Apply switch statement to implement the same. |
| 2 | Implement a calculator program that displays a menu with options 1. Add 2. Sub 3. Mul 4. Div Read 2 numbers and perform the relevant operation. After performing the operation, the program should ask the user if he wants to continue. If the user press Yes or Y, then the program should continue displaying the menu else the program should terminate. |
| 3 | Accept a n array of 5 positive integers. Create a program to find the smallest positive integer in the user input array which cannot be formed from the sum of 2 numbers in the array. |
| 4 | Develop a Go Program to check whether the user given matrix is a sparse or not. |
| 5 | Design and develop a simple Go function to find the longest substring without repeating characters in a given String. |
| 6 | Illustrate the different types of recursion in Go with suitable programs. Direct, Indirect, Tail and Head Recursion |
| | PART-B |
| 7 | Design a structure Employee with name and salary as its filed. Create three employee instances. Print the details and computer the average salary. |
| 8 | Create a program to swap two numbers using pointers in Go. |
| 9 | Apply pointer to structure concept to print the details of 3 student records. Assume Student record to contain USN, name and marks. |
| 10 | Develop a program to illustrate how to create an anonymous Goroutine. |
| 11 | Develop a program to illustrate how to start multiple Go routines. |
| 12 | Solve Producer Consumer concurrency issue using Go concurrency concept. |
| | PART-C |

Beyond Syllabus Virtual Lab Content (To be done during Lab but not to be included for CIE or SEE)

- Develop a Golang program to replace all occurrences of a word with another word in the given string. https://www.youtube.com/watch?v=vFqipJfCG6Q
- Develop a calculator program using switch cases in Golang. https://www.youtube.com/watch?v=ca8xBxKWXsM
- Develop bubble sort implementation in Golang. https://www.youtube.com/watch?v=98yDJ5vao5Q

Suggested Learning resources Text Books:

- 1. A Donovan, Brain W.Keringhan, "The Go Programming Language", Addison-Wesley Professional Computing Series, 2016 (Reprint)
- 2. An Introduction to Programming In Go by Caleb Doxsey

E-Reference Books:

- 1) www.tutorialgateway.org/go-programs
- 2) https://gobyexample.com

4. Syllabus Timeline

| S/L | Syllabus Timeline | Description |
|-----|-------------------|---|
| 1 | Week 1-2: | Program 1: Design and Implement a Go program to print the name of the months and number of days based on user input number. Apply switch statement to implement the same. Program 2: Implement a calculator program that displays a menu with options 1. Add 2. Sub 3. Mul 4. Div Read 2 numbers and perform the relevant operation. After performing the operation, the program should ask the user if he wants to continue. If the user press Yes or Y, then the program should continue displaying the menu else the program should terminate. |
| 2 | Week 3-4: | Program 3: Accept a n array of 5 positive integers. Create a program to find the smallest positive integer in the user input array which cannot be formed from the sum of 2 numbers in the array. Program 4: Develop a Go Program to check whether the user given matrix is a sparse or not. |
| 3 | Week 5-6: | Program 5: Design and develop a simple Go function to find the longest substring without repeating characters in a given String. Program 6: Illustrate the different types of recursion in Go with suitable programs. Direct, Indirect, Tail and Head Recursion |

2023Scheme - 5th to 6th Sem Competency Based Syllabi for B.E in CS(DS)

| 4 | Week 7-8: | Program 7: Design a structure Employee with name and salary as its filed. Create three employee instances. Print the details and computer the average salary. Program 8: Create a program to swap two numbers using pointers in Go. |
|---|-------------|---|
| 5 | Week 9-10: | Program 9: Apply pointer to structure concept to print the details of 3 student records. Assume Student record to contain USN, name and marks. Program 10: Develop a program to illustrate how to create an anonymous Goroutine. |
| 6 | Week 11-12: | Program 11: Develop a program to illustrate how to start multiple Go routines. Program 12: Solve Producer Consumer concurrency issue using Go concurrency concept. |

5. Teaching-Learning Process Strategies

| S/L | TLP Strategies: | Description |
|-----|--|---|
| 1 | Hands-on Coding Sessions | Conduct regular coding exercises and labs where students actively write and run Go programs, reinforcing concepts learned in lectures. Provide practical projects that require the application of Go's concurrency model, standard libraries, and tools. |
| 2 | Interactive Lectures and Discussions | Use interactive lectures to introduce and explain Go's core concepts, such as goroutines, channels, and Go modules. Encourage class discussions and Q&A sessions to clarify doubts and deepen understanding of complex topics. |
| 3 | Problem-Based Learning (PBL) | Present real-world scenarios and problems that require students to design and develop solutions using Go.Assign group projects that foster collaboration and peer leaming, simulating professional Go development environments. |
| 4 | Code Reviews and Pair Programming | Implement code review sessions where students evaluate each other's code, learning best practices and improving their coding style. Utilize pair programming to enhance collaboration, allowing students to work together to solve coding challenges. |
| 5 | Quizzes and Assessments | Use regular quizzes and assessments to gauge understanding of key Go concepts and reinforce learning. Include both theoretical questions and practical coding tasks in assessments to ensure comprehensive evaluation. |
| 6 | Advanced Topics | State Management: Introduce advanced topics like state management and how to handle complex data flows in larger applications. |
| 7 | Continuous Feedback and Support | Offer timely feedback on assignments and projects, guiding students in improving their Go programming skills. Provide additional support through office hours, online forums, or study groups to address individual learning needs. |

6. Assessment Details (both CIE and SEE)

Class Work:-A

CIE Split up for Laboratory based Ability Enhancement Course

| SL. No. | Description | % of Marks | In Marks |
|---------|--|------------|----------|
| 1 | Write-up, Conduction, result and Procedure | 60% | 30 |
| 2 | Viva-Voce | 40% | 20 |
| | Total | 100% | 50 |

The Test marks should be scaled down to 30marks (60% of the maximum Marks)

Laboratory Test: -B

CIE Split up for Test in Laboratory based Ability Enhancement Course

| on | % of Marks | In Marks | |
|----------------------------------|----------------------------------|--|--|
| Conduction, result and Procedure | 60% | 30 | |
| ; | 40% | 20 | |
| Total | | | |
| | Conduction, result and Procedure | Conduction, result and Procedure 60% 40% | |

The Test marks should be scaled down to 20marks (40% of the maximum Marks)

Final CIE for Laboratory based Ability Enhancement Course

| SL. No. | Description | % of Marks | In Marks |
|---------|---------------------------------------|--------------------|----------|
| 1 | Scaled Down marks of record/journal-A | 60% of the maximum | 30 |
| 2 | Scaled Down marks of test-B | 40% of the maximum | 20 |
| Total | | 100% | 50 |

FinalCIE Marks =(A) + (B)

SEE for practical Course:

| SL. No. | Description | % of Marks | Marks |
|---------|-------------------------|------------|-------|
| 1 | Write-up, Procedure | 20% | 20 |
| 2 | 2 Conduction and result | | 60 |
| 3 | Viva-Voce | 20% | 20 |
| | Total | 100% | 100 |

- 1. SEE marks for practical course shall be 50 marks
- 2. SEE for practical course is evaluated for 100 marks and scored marks shall be scaled down to 50 marks.
- 3. Change of experiment/program is allowed only once and 20% marks allotted to the procedure/write-up part to be made zero.

4. Duration of SEE shall be 3 hours. 6. Learning Objectives

| S/L | Learning Objectives | Description |
|-----|--|---|
| 1 | Understand Go Syntax and Structure | Students will be able to identify and use Go's syntax, data types, and control structures to write basic programs |
| 2 | Implement Concurrency in Go | Students will understand Go's concurrency model and be able to create and manage goroutines and channels to develop concurrent applications. |
| 3 | Utilize Go's Standard Library | Students will learn to effectively use Go's standard library for tasks such as file handling, error management, and networking. |
| 4 | Develop and Test Go Applications | Students will be able to write, build, and run Go applications, and utilize Go's testing framework to create and run unit tests. |
| 5 | Design and Optimize Go-based Systems | Students will gain the ability to design, implement, and optimize scalable backend services and APIs using Go, focusing on performance and maintainability. |
| 6 | Apply Best Practices in Go Programming | Students will understand and apply Go programming best practices, including code organization, documentation, and code reviews. |

7. Course Outcomes (COs) and Mapping with POs/ PSOs Course Outcomes (COs)

| Cos | Description |
|---|--|
| M23BCS607D.1 | Apply the basic programming Go Lang constructs to develop standalone applications. |
| M23BCS607D.2 Apply the concept of functions and recursive functions in GoLang program | |
| M23BCS607D.3 | Develop applications using Go Routines and channels |
| M23BCS607D.4 | Solve the real-world concurrency issues using concurrency with go concepts. |

CO-PO-PSO Mapping

| | , 1001 | | 0 | | | | | | | | | | | |
|--------------|--------|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|------|------|

| Program 1 to 12 | 20 | 30 | 20 | 30 | 100 |
| Total | 20 | 30 | 20 | 30 | 100 |

9. Future with this Subject

The future with Go (Golang) programming language looks promising, driven by its strengths and growing adoption in various industries. Here are some key trends and potential future developments:

1. Increased Adoption in Cloud and Microservices:

- Go's efficiency and concurrency model make it ideal for cloud-native development and microservices. As
 more organizations move towards microservices architectures, Go's role in building scalable,
 highperformance services is likely to expand.
- Companies like Google, Uber, and Dropbox have already integrated Go into their systems, and this trend is expected to grow, especially in cloud platforms like Kubernetes, which is itself written in Go.

2. Growing Ecosystem and Tooling:

- The Go ecosystem is continuously evolving, with a growing number of libraries, frameworks, and tools. The introduction of modules for dependency management has made Go even more robust.
- Tools like GoLand (IDE), Go's built-in testing suite, and profiling tools continue to improve, making Go development more accessible and efficient.

3. Continued Focus on Simplicity and Performance:

- Go's design philosophy emphasizes simplicity and minimalism, which resonates with developers seeking to build maintainable and efficient systems. As the demand for performant and scalable software grows, Go's straightforward approach will remain attractive.
- The language's performance characteristics, particularly in networked applications and large-scale systems, will keep it relevant in performance-critical environments.

4. Expansion in DevOps and Site Reliability Engineering (SRE):

• Go's quick compilation times, static binaries, and cross-platform capabilities make it a preferred choice for developing DevOps tools and SRE applications. Its growing popularity in this area is likely to continue as infrastructure-as-code and automation become more prevalent.

5. Broader Application in Emerging Technologies:

- As technologies like blockchain, AI, and IoT continue to grow, Go's reliability and performance could see it being adopted in these fields. For example, Go is already being used in blockchain platforms like Ethereum and Hyperledger Fabric.
- The language's ease of deployment and low overhead make it suitable for resource-constrained environments like IoT devices.

6. Enhanced Support for Web Development:

- Although not traditionally seen as a web development language, Go's use in backend web services and APIs is on the rise. Frameworks like Gin and Echo are helping Go gain traction in the web development community.
- As web applications continue to evolve, Go could see increased use in performance-critical web backends and real-time services.

7. Active Community and Language Evolution:

- The Go community is active and continues to drive the language forward with regular updates and proposals for new features. The community's focus on keeping Go simple yet powerful ensures that the language will continue to evolve to meet the needs of developers.
- Future versions of Go are likely to introduce features that address current limitations while maintaining the language's core simplicity.

8. Learning and Career Opportunities:

- As Go's popularity increases, there will be more opportunities for learning and career advancement in this field. Developers proficient in Go are already in demand, particularly in industries focused on cloud computing, backend development, and distributed systems.
- Educational resources, both online and in academic settings, are likely to expand, further driving the language's adoption.

| 6th Semester | Non-Credit Mandatory Course(NCMC) National Service Scheme(NSS) | M23BNSK608 |
|--------------|--|------------|
|--------------|--|------------|

| Non-Credit Mandatory Courses(NCMC) National Service Scheme(NSS) | | | | | |
|---|---------------------------|-----------------------------|---------------------------|--|--|
| Course Code | M23BNSK608 | | | | |
| Number of Lecture Hours/Week(L:T:P:S) | (0:0:2:0) | CIE Marks | 100 | | |
| Total Number of Lecture Hours | - | SEE Marks | - | | |
| Credits 0 Total Marks 100 | | | | | |
| Activities Report Evaluation by Colle | ege NSS Officer at the en | d of every semester(3 rd to | 6 th semester) | | |

Course objectives:

National Service Scheme (NSS) will enable students to:

- 1. Understand the community in general in which they work.
- 2. Identify the needs and problems of the community and involve them in problem-solving.
- 3. Develop among them a sense of social & civic responsibility & utilize their knowledge in finding practical solutions to individual and community problems.
- 4. Develop competence required for group-living and sharing of responsibilities & gain skills in mobilizing community participation to acquire leadership qualities and democratic attitudes.
- 5. Develop capacity to meet emergencies and natural disasters & practice national integration and social harmony in general.

General Instructions-Pedagogy:

These are sample Strategies, which teachers can use to accelerate the attainment of the various course outcomes.

- 1. In addition to the traditional lecture method, different types of innovative teaching methods may be adopted so that the activities will develop students' theoretical and applied social and cultural skills.
- 2. State the need for NSS activities and its present relevance in the society and Provide real-life examples.
- 3. Support and guide the students for self-planned activities.
- 4. You will also be responsible for assigning homework, grading assignments and quizzes, and documenting students' progress in real activities in the field.
- 5. Encourage the students for group work to improve their creative and analytical skills.

Contents:

- 1. Organic farming, Indian Agriculture (Past, Present and Future)Connectivity for marketing.
- 2. Waste management–Public, Private and Govt organization, 5R's.
- 3. Setting of the information imparting club for women leading to contribution in social and economic issues.
- 4. Water conservation techniques—Role of different stakeholders—Implementation.
- 5. Preparing an action able business proposal for enhancing the village in come and approach for implementation.
- 6. Helping local schools to achieve good results and enhance their enrolment in Higher/technical/vocational education.
- 7. Developing Sustainable Water management system for rural areas and implementation approaches.
- 8. Contribution to any national level initiative of Government of India. For eg. Digital India, Skill India, Swatch Bharat, Atmanirbhar Bharath, Make in India, Mudra scheme, Skill development programs etc.
- 9. Spreading public awareness under rural out reach programs. (minimum 5 programs).
- 10. Social connect and responsibilities.
- 11. Plantation and adoption of plants. Know your plants.
- 12. Organize National integration and social harmony events/workshops/seminars.(Minimum 02 programs).
- 13. Govt.school Rejuvenation and helping them to achieve good infrastructure.

NOTE:

Student/s in individual or in a group should select any one activity in the beginning of each semester till end of that respective semester for successful completion as per the instructions of NSS officer with the consent of HOD of the department.

At the end of every semester, activity report should be submitted for evaluation.

Distribution of Activities – Semester wise from 3rd to 6th semester

| Sem | Topics / Activities to be Covered |
|-----|-----------------------------------|
|-----|-----------------------------------|

2023Scheme - 5^{th} to 6^{th} Sem Competency Based Syllabi for B.E in CS(DS)

| 3 rd Sem for 25 | Organic farming, Indian Agriculture (Past, Present, and Future) Connectivity for marketing. Waste management—Public, Private and Govt organization, 5R's. Setting of the information imparting club for women leading to contribution in social and |
|-------------------------------------|--|
| Marks | economic issues. |
| 4 th Sem for 25 Marks | Water conservation techniques—Role of different stakeholders—Implementation. Preparing an actionable business proposal for enhancing the village income and approach for implementation. Helping local schools to achieve good results and enhance their enrolment in Higher/technical/ vocational education. |
| 5 th Sem for 25 Marks | Developing Sustainable Water management systems for rural areas and implementation approaches. Contribution to any national-level initiative of the Government of India. For eg. Digital India, Skill India, SwachhBharat, Atmanirbhar Bharath, MakeinIndia, Mudrascheme, Skill development programs etc. Spreading public awareness under rural out reach programs. (minimum 5 programs). Social connect and responsibilities. |
| 6 th Semfor 25 Marks | Plantation and adoption of plants. Know your plants. Organize National integration and social harmony events/workshops/seminars.(Minimum 02 programs). Govt.school Rejuvenation and helping them to achieve good infrastructure. |

Course outcomes (Course Skill Set):

| COs | Description | | |
|---|---|--|--|
| M23BNSK608.1 | Understand the importance of his/her responsibilities towards society. | | |
| M23BNSK608.2 Analyse the environmental and societal problems/issues and will be able to solutions for the same. | | | |
| M23BNSK608.3 | Evaluate the existing system and to propose practical solutions for the same for sustainable development. | | |
| M23BNSK608.4 | Implement government or self-driven projects effectively in the field. | | |
| | Develop capacity to meet emergencies and natural disasters & practice national integration and social harmony in general. | | |

Plan of Action ((Execution of Activities For Each Semester)

| Sl.No | Practice Session Description |
|-------|--|
| 1. | Lecture session by NSS Officer |
| 2. | Students Presentation on Topics |
| 3. | Presentation-1,Selection of topic, PHASE-1 |
| 4. | Commencement of activity and its progress -PHASE-2 |
| 5. | Execution of Activity |
| 6. | Execution of Activity |
| 7. | Execution of Activity |
| 8. | Execution of Activity |
| 9. | Execution of Activity |
| 10. | Case-study-based Assessment, Individual performance |
| 11. | Sector wise study and its consolidation |
| 12. | Video-based seminar for 10-minutes by each student At the end of the semester with a Report. |

2023Scheme - 5th to 6th Sem Competency Based Syllabi for B.E in CS(DS)

- In every semester from 3rd semester to 6th semester, Each student should do activities according to the scheme and syllabus.
- At the end of every semester student performance has to be evaluated by the NSS officer for the assigned activity progress and its completion.
- At last in 6th semester consolidated report of all activities from 3rd to 6th semester, compiled report should be submitted as per the instructions.

Assessment Details:

| Assessment Details. | | |
|--|----------|--|
| Weightage | CIE-100% | Implementation strategies of the |
| Presentation-1 Selection of topic, PHASE-1 | 10 Marks | project(NSS work). The last Report should be signed by the |
| Commencement of activity and its progress - PHASE-2 | 10 Marks | NSS Officer, the HOD, and the principal At-last Report should be evaluated by |
| Case Study-based Assessment Individual Performance with Report | 10 Marks | the NSS officer of the institute. • Finally, the consolidated marks sheet |
| Sector-wise study & its consolidation | 10 Marks | should be sent to the university and |
| Video based seminar for 10 minutes by each student At the end of semester with Report. Activities. | 10 Marks | made available at the LIC visit. |
| Total marks for the course in each semester | 50 Marks | |

Marks scored for 50 by the students should be Scale down to 25 marks In each semester for CIE entry in the VTU portal.

25 marks CIE entry will be entered in University IA marks portal at the end of each semester 3rd to 6th sem, Report and assessment copy should be made available in the department semester wise

Students should present the progress of the activities as per the schedule in the prescribed practical session in the field. There should be positive progress in the vertical order for the benefit of society in general.
